PREFACE

A PRACTICAL Vedic grammar has long been a desideratum. It is one of the chief aids to the study of the hymns of the Veda called for forty-three years ago in the preface to his edition of the Rigveds by Max Müller, who adds, 'I doubt not that the time will come when no one in India will call himself a Sanskrit scholar who cannot construe the hymns of the ancient Rishis of his country'. It is mainly due to the lack of such a work that the study of Vedic literature. despite its great linguistic and religious importance, has never taken its proper place by the side of the study of Classical Sanskrit either in England or India. Whitney's excellent Sanskrit Grammar, indeed, treats the earlier language in its historical connexion with the later, but for this very reason students are, as I have often been assured, unable to acquire from it a clear knowledge of either the one or the other, because beginners cannot keep the two dialects apart in the process of learning. Till the publication of my large Vedic Grammar in 1910, no single work comprehensively presented the early language by itself. That work is, however, too extensive and detailed for the needs of the student, being intended rather as a book of reference for the scholar. Hence I have often been urged to bring out a short practical grammar which would do for the Vedic language what my Sanskrit Grammar for Beginners does for the Classical language. In the second edition (1911) of the latter work I therefore pledged myself to most this demand as soon as I could. The present volume

redeems that pledge.

When planning the book I resolved, after much reflection, to make it correspond paragraph by paragraph to the Sanskrit Grammar, this being the best way to enable students to compare and contrast every phenomenon of the earlier and the later language. To this extent the present book presupposes the other; but it can quite well be used independently. The experience of many years' teaching, however, leads me to dissuade beginners from starting the study of Sanskrit by means of the present grammar. Students should, in my opinion, always commence with classical Sanskrit, which is more regular and definite, as well as much more restricted in the number of its inflexional forms. A good working knowledge of the later language should therefore be acquired before taking up Vedic grammar, which can then be rapidly learned.

In carrying out the parallelism of this grammar with the other I have experienced a good deal of difficulty in numbering the corresponding paragraphs satisfactorily, because certain groups of matter are found exclusively in the Vedic language, as the numerous subjunctive forms, or much more fully, as the dozen types of infinitive compared with only one in Sanskrit; while some Sanskrit formations, as the periphrastic future, are non-existent in the earlier language. Nevertheless, I have, I think, succeeded in arranging the figures in such a way that the corresponding paragraphs of the two grammars can always be easily compared. The only exception is the first chapter, consisting of fifteen paragraphs, which in the Sanskrit Grammar deals with the Nagari alphabet. As the present work throughout uses transliteration only, it seemed superfluous to repeat the description of the letters given in the earlier work. I have accordingly substituted a general phonetic

survey of Vedic sounds us enabling the student to understand clearly the linguistic history of Sanskrit. The employment of transliteration has been necessary because by this means alone could analysis by hyphens and accentuation be adequately indicated. Duplication with Nagari characters. as in the Sanskrit Grammar, would have increased the size and the cost of the book without any compensating advantage. An account of the accent, as of vital importance in Vedic grammar, would naturally have found a place in the body of the book, but owing to the entire absence of this subject in the Sanskrit Grammar and to the fulness which Its treatment requires, its introduction there was impossible. The accent is accordingly dealt with in Appendix III as a substitute for the 'Chief Peculiarities of Vedic Grammar' appearing at the end of the Sanskrit Grammar.

The term Vedic is here used to comprehend not only the metrical language of the hymns, but also the prose of the Brahmanas and of the Brahmana-like portions of the Atharvayeda and of various recensions of the Yajurveda. The grammatical material from the later period is mainly given in small type, and is in any case regularly indicated by the addition of the letter B (for Brahmana). Otherwise the phase of the earlier language presented is that of the Rigyeda, as being both the oldest and furnishing the most abundant material. But forms from the other Vedas are often also supplied without any distinguishing mark as long as they conform to the standard of the Rigveda. If, however, such forms are in any way abnormal, or if it seemed advisable to point out that they do not come from the Rigveda, this is indicated by an added abbreviation in brackets, as '(AV.)' for '(Atharvaveda).' On the other hand '(RV.)' is sometimes added in order to indicate, for some reason or other, that a form is restricted to the Rigveds. It is, of course, impossible to go much into detail thus in a practical work; but the exact source of any particular form can always be ascertained by reference to the large Vedic Grammar. The grammatical usage of the other Vedas, when it differs from that of the Rigveda, is regularly explained. The reference is given with precise figures when syntactical examples are taken from the Rigveds, but with abbreviations only (as TS, for Taittiriea Samhita or SB, for Satapatha Brühmana) when they come from elsewhere. Syntactical citations are not always metrically intact because words that are unnecessary to illustrate the usage in question are often omitted. The accent in verbal forms that happen to occur in Vedic texts without it, is nevertheless given if its position is undoubted, but when there is any uncertainty it is left out. In the list of verbs (Appendix I) the third person singular is often given as the typical form even when only other persons actually occur. Otherwise only forms that have been positively noted are enumerated.

I ought to mention that in inflected words final s, r, and d of endings are given in their historical form, not according to the law of allowable finals (§ 27); e.g. dūtás, not dūtáh; tásmād, not tásmāt; pitúr, not pitúh; but when used syntactically they appear in accordance with the rules of Sandhi; e.g. devánām dūtáh; vṛṭrásya vadhāt.

The present book is to a great extent based on my large Vedic Grammar. It is, however, by no means simply an abridgement of that work. For besides being differently arranged, so as to agree with the scheme of the Sanskrit Grammar, it contains much matter excluded from the Vedic Grammar by the limitations imposed on the latter work as one of the volumes of Bahler's Encyclopacdia of Indo-Aryan Research. Thus it adds a full treatment of Vedic Syntax and an account of the Vedic metres. Appendix I, moreover, contains a list of Vedic verbs (similar to that in the Sanskrit Grammar), which though all their forms appear in their

appropriate place within the body of the Vedic Grammar, are not again presented there in the form of an alphabetical list, as is done here for the benefit of the learner. Having subjected all the verbal forms to a revision, I have classified some doubtful or ambiguous ones more satisfactorily, and added some others which were inadvertently omitted in the large work. Moreover, a full alphabetical list of conjunctive and adverbial particles embracing forty pages and describing the syntactical uses of these words has been added in order to correspond to § 180 of the Sanskrit Grammar. The present work therefore constitutes a supplement to, as well as an abridgement of, the Vedic Grammar, thus in reality setting forth the subject with more completeness as a whole, though in a comparatively brief form, than the larger work. I may add that this grammar is shortly to be followed by a Vedic Reader consisting of selected hymns of the Rigveda and supplying microscopic explanations of every point on which the elementary learner requires information: These two books will, I hope, enable him in a short time to become an independent student of the sacrod literature of ancient India.

For the purposes of this book I have chiefly exploited my own Vedic Grammar (1910), but I have also utilized a Delhrück's Altindische Syntax (1888) for syntactical material, and Whitney's Roots (1885) for the verbal forms of the Brahmana literature. In describing the metres (Appendix II) I have found Oldenberg's Die Hymnen des Rigreda (1888), and Arnold's Vedic Metre (1905) very useful.

I am indebted to Dr. James Morison and to my former pupil, Professor A. B. Keith, for reading all the first proofs with great care, and thus saving me from many misprints that would have escaped my own notice. Professor Keith has also suggested important modifications of some of my grammatical statements. Lastly, I must congratulate Mr. J. C. Pembrey, Hon. M.A., Oriental Reader at the Clarendon Press, on having completed the task of reading the final proofs of this grammar, now all but seventy years after correcting Professor H. H. Wilson's Sunskrit Grammar in 1847. This is a record in the history of Oriental, and most probably of any, professional proof reading for the press.

A. A. MACDONELL.

The corrections have been incorporated in 15 books

CHAPTER I

PHONETIC INTRODUCTION

1. Vedic, or the language of the literature of the Vedas, is represented by two main linguistic strata, in each of which, again, earlier and later phases may be distinguished. The older period is that of the Mantras, the hymns and spells addressed to the gods, which are contained in the various Samhitas. Of these the Rigveda, which is the most important, represents the earliest stage. The later period is that of the prose theological treatises called Brahmanas. Linguistically even the oldest of them are posterior to most of the latest parts of the Samhitas, approximating to the stage of Classical Sanskrit. But they still retain the use of the subjunctive and employ many different types of the infinitive, while Sanakrit has lost the former and preserves only one single type of the latter. The prose of these works, however, to some extent represents better than the language of the Mantras the normal features of Vedic syntax, which in the latter is somewhat interfered with by the exigences of metre.

The language of the works forming appendices to the Brahmanas, that is, of the Āraṇyakas and Upaniṣads, forms a transition to that of the Satras, which is practically

identical with Classical Sanskrit.

The linguistic material of the Rigveda, being more ancient, extensive, and authentic than that of the other Samhitas, all of which borrow largely from it, is taken as the basis of this grammar. It is, however, considerably supplemented from the other Samhitas. The grammatical forms of the Brahmanas, where they differ from those of Classical Sanskrit, have been indicated in notes, while the r syntax

tate B

is fully dealt with, because it illustrates the construction of sentences better than the metrical hymns of the Vedas.

- 2. The hymns of the Vedas were composed many centuries before the introduction of writing into India, which can hardly have taken place much earlier than 600 g.c. They were handed down till probably long after that event by oral tradition, which has lasted down to the present day. Apart from such tradition, the text of the Samhitas has been preserved in manuscripts, the earliest of which, owing to the adverse climatic conditions of India, are scarcely five centuries old. How soon they were first committed to writing, and whether the hymns of the Rigveda were edited in the form of the Samhita and Pada texts with the aid of writing, there seems insufficient evidence to decide; but it is almost inconceivable that voluminous prose works such as the Brahmanas, in particular the Satapatha Brahmana, could have been composed and preserved without such nid.
- 3. The sounds of the Vedic language. There are altogether fifty-two sounds, thirteen of which are vocalic and thirty-nine consonantal. They are the following:—
- a. Nine simple vowels: a fi i u u r 71; four diphthongs: e o ni au.
- b. Twenty-two mutes divided into five classes, each of which has its nasal, making a group of twenty-seven:
 - (a) five gutturals (velars); k kh g gh n;
 - (β) five palatals; c ch j jh " ñ;

2 This wound is very rare, occurring only once in the RV, and not at all in the AV.

The text of the Vedas, with the exception of Aufrecht's and Weber's transliterated editions of the RV, and the TS, is always printed in the Devandgari character. The latter having been fully described in my Sometri Grammer for Espience (§§ 4-14), it is unnecessary to repeat what is there stated. It will suffice here to give a summary secount of all the sounds of the Vedic language.

- (y) seven cerebrals : t th, d and i, dh and th, n;
- (d) five dentals: t th d dh n;

(c) five labials : p ph b bh m;

- c. Four semivowels: y (palatal), r (cerebral), 1 (dental), y (labial);
 - d. Three sibilants: s (palatal), s (cerebral), s (dental);

c. One aspiration: h;

f. One pure nasal : m (m) called Anusvara (after sound).

g. Three voiceless spirants; h (Visarjantya), h (Jihva-muhya), h (Upadhmantya).

4. a. The simple vowels:

ă ordinarily represents an original short vowel (IE. ă ē ō); but it also often replaces an original sonant nasal, representing the reduced form of the unaccented syllables an and am, as sat-ā beside sent-am being; ga-ta gone beside ā-gam-at has gone.

ā represents both a simple long vowel (IE. ā ē ô) and a contraction; e.g. mātār (Lat. māter) mother; āsam = ā-as-am I was. It frequently also represents the unaccented

syllable an; e.g. khā-tá dug from khan dig.

i is ordinarily an original vowel; e.g. div-i (Gk. διρί) in heaven. It is also frequently the low grade of e and ya; e.g. vid-mā (ἴδμεν) we know beside véd-a (οἶδα) I know; náv-iṣṭhā newest beside náv-yas newer. It also represents the low grade of radical ā; e.g. šiṣ-ṭā taught beside šās-ti teuches.

i is an original vowel; e.g. jīv-ā living. But it also often represents the low grade of yā; e.g. aś-i-māhi we would attain beside aś-yām I would attain; or a contraction; e.g. iṣūr they have sped (= i-iṣ-ūr 3, pl. pf. of iṣ); mati by thought (= matiā).

t This is much the rarest class of mutes, being scarcely half as common as even the palatals.

^{*} These two sounds take the place of d dh respectively between vowels in the RV. texts; e.g. fle (but fdyn), milhige (but midhván).

u is an original vowel; e.g. madhu (Gk. $\mu\ell\theta\nu$) honey. It is also the low grade of o and va; e.g. yug-á u. yoke beside yóg-a m. noking; sup-ta asken beside svap-na m.

sleep.

ū is an original vowel; e.g. bhrū (ὁ-φρύ-s) f. brow. It is also the low grade of au and vā; e.g. dhū-tā shaken beside dhau-tārī f. shaking; sūd sweeten beside avād enjog; and often represents a contraction; e.g. ūc-ūr = u-uc-ūr they have spoken (3. pl. pf. of vac); bāhū the two urms = bāhū-ā.

r is a vocalic r, being the low grade of ar and ra; e.g. kr-tá done beside ca-kár-a I have done; grbh-ī-tá seized beside gráth-a m. seizure.

\(\bar{r} \) occurs only in the acc. and gen, pl. m. and f. of ar stems
(in which it is the lengthened low grade); e.g. pitro,
matrh; pitronm, svásrnám.

I is a vocalic I, being the low grade of al, occurring only in a few forms or derivatives of the verb klp (kalp) be in order: caklpré 3. pl. pf.; ciklpati 3. s. aor. subj.; klpti (VS.) 1. arrangement beside kalpasva 2. s. impv. mid., kálp-a m. pious work.

b. The diphthongs.

ě and ö stand for the original genuine diphthongs ái au. They represent (1) the high grade corresponding to the weak grade vowels i and u; e.g. séc-ati pours beside sik-tá poursd; bhój-am beside bhúj-am aor, of bhuj enjoy; (2) the result of the coalescence of å with i and û in external and internal Sandhi; e.g. éndra = å indra; ó cit = å u cit; padė = padå i du. n. two steps; bháveta = bháva ita 3. s. opt. might be; maghón (= maghá un) weak stem of maghávan bountiful; (3) e = az in a few words before d, dh, h; e.g. e-dhi be 2, s. impv. of as beside ås-ti; o = az before bh of case-endings, and before y and v of secondary suffixes; e.g. dvéşo-bhis inst. pl. of dvéşas n. hatred;

duvo-yū wishing to give (beside duvas-yū): saho-yan mighty beside sahas-yant.

ai and au etymologically represent ai and au, as is indicated by the fact that they become ay and av in Sandhi; e.g. gav-as comes beside gau-s; and that the Sandhi of a with e (= ai) and o (= au) is ai and au respectively.

- 5. Vowel gradation. Simple vowels are found to interchange in derivation as well as in verbal and nominal inflexion with fuller syllables, or if short also with long vowels. This change is dependent on shift of accent: the fuller or long syllable remains unchanged while it bears the accent, but is reduced to a simple or short vowel when left by the accent. This interchange is termed vowel gradation. Five different series of such gradation may be distinguished.
- a. The Guna series. Here the accented high grade syllables e, c, ar, al, constituting the fundamental stage and called Guna (cp. 17a) by the native grammarians, interchange with the unaccented low grade syllables i, u, r, l respectively. Beside the Guna syllables appear, but much less frequently, the syllables ai, au, är (äl does not occur), which are called Vrddhi by the same authorities and may be regarded as a lengthened variety of the Guna syllables. Examples are: didés-a has pointed out: dis-ta pointed out; é-mi I go: i-mas we go; āp-nò-mi I obtain; āp-nu-mas we obtain; várdhāya to further: vrdhāya, id.

a. The low grade of both Guna and Vrddhi may he î, u, îr, îr; as hibbay-a l ham feared and bibbay-a has feared; bhi-tā frightened; jubăv-a has invoked; hū-tā maked; tatār-a has crossed; tir-āte crosses and tir-pā crossel.

b. The Samprasarana series. Here the accented high grade syllables ya, va, ra (corresponding to the Guna stage e, o, ar) interchange with the unaccented low grade vowels i, u, r; e.g. i-yaj-a I have sacrificed: is-ta sacrificed; vas-ti desires: us-masi we desire; ja-grah-a I have seized: ja-grh-ur they have seized.

a. Similarly the long syllables yā, vā, yā are reduced to 1, u.fr; w.g. jyā f. might: ji-yā-to is ourcome; bru-yā-t would my: bru-yi-iā id.; syād-u sweet: sud-āya-ti sweets; drāgh-tyns longs; drīgh-tyns longs.

c. The a series.

- I. In its low grade stage a would normally disappear, but as a rule it remains because its loss would in most cases lead to unpronounceable or obscure forms; e.g. ás-tí is; s-ánti they are; ja-gám-a I huve gone; ja-gm-ur they have gone; pád-ya-te goes; pi-bd-aná standing firm; hán-ti stays; ghn-ánti they stay.
- 2. The low grade of the Vrddhi vowel a is either a or total loss; e.g. pad m. foot: pad-a with the foot; dadha-ti puts: dadh-masi we put; pu-na-ti purifies; pu-n-anti they purify; da-da-ti gives: deva-t-ta given by the gods.
- 3. When a represents the Guna stage its low grade is normally i; e, g, stha-s thou hast stood; sthi-ta stood.
- a. Sometimes it is a owing to analogy; e.g. pu-nā-ti parijes; pu-nā-ti parije. Sometimes, especially whom the low grade syllable has a secondary account, it is a; e.g. gân-ate places; gân-ana u. degle.

d. The ai and au series.

The low grade of ai (which appears as ay before vowels and a before consonants) is i; e.g. gay-ati sings, ga-tha m. song: gi-ta sung.

The low grade of au (which is parallel to vā: 5 b a) is ū; e.g. dhav-ati washes: dhū-ta nushed; dhau-tarī f. shaking: dhū-ti m. shaker, dhū-mā m. smoke.

e. Secondary shortening of ī, ū, r̄. The low grade ayllables ī, ū, ir and ūr (= r̄) are further reduced to i, u, r̄, owing to shift of accent from its normal position in a word to its beginning, in compounds, reduplicated forms, and vocatives; e.g.ū-huti f. invocation:-hūti call; didi-vi shining: dī-pāya kindle; cār-kṛ-ṣe thou commemoratest: kir-ti f. praise (from root kr̄); pi-pṛ-tām 3. du.: pūr-tā full (root pṝ); dēvi voc.: devi nom. goddess; śvāšru voc.: āva-śrū-a nom. molher-in-lane.

The Consonants.

- 6. The guttural mutes represent the Indo-European velars (that is, q-sounds). In the combination k-ş the guttural is the regular phonetic modification of a palstal before s; e.g. drś see: nor. ádrk-sata; vac speak: fut. vak-syáti.
 - 7. The palatals form two series, the earlier and the later.

a. Original palatals are represented by ch and s, and to

some extent by j and h.

 The aspirate ch is derived from an IE, double sound, s+ aspirated palatal mute; e.g. chid cut off = Gk, σχιδ.
 But in the inchestive suffix cha it seems to represent s+ unaspirated palatal mute; e.g. gáchā-mi = Gk. βάσκω.

 The sibilant s represents an IE. palatal (which seems to have been pronounced dialectically either as a spirant or a mute); e.g. śatám 100 = Lat. centum, Gk. ε-κατόν.

3. The old palatal j (originally the media of \$\delta = \text{I-Ir. \$\delta}\$, French j) is recognizable by appearing as a cerebral when final or before mutes; e.g. yaj-ati sucrifices beside nor. \$\delta\$-yat has sucrificed, yas-tr sucrificer, in-the sucrificed.

4. The breathing h represents the old palatal aspirate I-Ir. žh. It is recognizable as an old palatal when, either as final or before t, it is replaced by a cerebral; e. g. váh-ati

carries beside a-vat has carried.

- b. The new palatals are c and to some extent j and h. They are derived from gutturals (velars), being interchangeable, in most roofs and formatives, with gutturals; e.g. 66c-ati shines beside 66k-a m. flame, suk-van flaming, suk-ra brilliant; yuj-a I yoke beside yug-a n. yoke, yog-a m. yoking, yuk-ta yoked, -yug-van yoking; du-droh-a has injured beside drogh-a injurious.
- a. The original gutturals were changed to palutals by the palatal sounds t, i, y immediately following; e. g. cit-th sected buside het-a m. will from cit perceiu; ò)-iyas shonger buside ug-ri shong; druh-yú, a proper name, beside drògh-a inperious.

8. The corebrals are entirely secondary, being a specifically Indian product and unknown in the Indo-Iranian period. They are probably due to aboriginal, especially Dravidian, influence. They are still rare in the RV., where they never occur initially, but only medially and finally. They have as a rule arisen from dentals immediately following the cerebral ş (= original s, ś, j, h) or resounds (r, r, r); e.g. duş-tára (= dus-tára) invincible; váṣ-ti (= váṣ-ti) wishes; mṛṣ-tá (= mṛṣ-tá) cleansed; nīḍā (= niṇḍā) 'nest; dū-ḍhi (= duz-ḍhi) ill-disposed; dṛḍhā ' (= dṛḥ-tá) firm; nṛ-ṇām (= nṛ-nām) of men.

Final cerebral mutes represent the old palatals i, ś, h; e. g. rāţ (= rāj) m. ruler nom, s.; vîpāţ (= vi-pāś) t a river; ṣāṭ (= sāh) overcoming; á-vāṭ (= á-văh-t) has conveyed (3, s. aor. of vah).

- 9. a. The dontals are original sounds, representing the corresponding IE. dentals. The mutes t and d, however, nometimes take the place of original s before s and bh respectively; e.g. á-vāt-sīs (AV.) nor. of vas dwell; mād-bhis inst. pl. of mās month.
- b. The tabials as a rule represent the corresponding IE. sounds. But b is very rarely inherited; the number of words containing this sound has, however, been greatly increased in various ways. Thus it often replaces p or bh in Sandhi and bh in reduplication; e.g. pi-bd-aná firm beside pad-á n. place; rab-dhá taken beside rábhanto they take; ba-bhūva has been from bhū be. There are also many words containing b which seem to have a foreign origin.
- 10. The masals. Of the five masals belonging to the corresponding five classes of mutes, only the dental n and the labial mappear independently and in any part of a word,

^{1. \$ (-} s or old palatal sh), the soft form of \$, has always disappeared after constraining d or dh and lengthening the preceding vowel.

^{*} Though written as a short your! the z is prosodically tong,

initially, medially, and finally; e. g. mūtř f. mother, năman n. name. The remaining three are always dependent on a contiguous sound. The guitural n, the palatal n, and the cerebral n are never initial, and the last two are never final. The guttural n appears finally only when a following k or g has been dropped, as in stems ending in no or nj and in those compounded with dří; e. g. pratyán nom. s. of pratyáne facing; kī-dřn nom. s. of kī-dřá of what kind?

a. Medially n appears regularly only before gutturals; e. g. unká m. hook; ankháya embrace; ánga n. limb; jánghá f. leg. Before other consonants it appears only when k or g has been dropped; e. g. yun-dhi for yung-dhi (= yunj-dhi) 2. s. impv. of yun join.

b. The palatal nasal occurs only before or after c or j, and before ch; e. g. páñca five; yaj-ñá m. sacrifice; váñchantu

let them desire.

c. The cerebral n appears within a word only, either before cerebral mutes or replacing dental n after r, r, or ş (either immediately preceding or separated from it by certain intervening letters); c. g. danda m. staff; nr-nam of men; varna m. colour; uşna hot; kramana n. step.

d. The dental n is the commonest of the masals; it is more frequent than m, and about three times as frequent as the other three taken together. As a rule it represents IE. n; but it also appears in place of the dental d or t, and of labial m before certain suffixes. It is substituted for d before the suffix -na; and for d or t before the m of secondary suffixes; e.g. an-na n. food (from ad cal); vidyin-mant gleaming (vidyat f. lightning); mfn-maya carthen (mfd f. carth). It is substituted for m before t; before suffixal m or v; and before suffixal s or t that have been dropped as final; e.g. yan-trá n. rein (yam restruin); a-gan-ma, gán-vahi (aor. of gam go); a-gan (= a-gam-s, a-gam-t) 2. 3. s. aor. of gam go; a-yan (= a-yam-s-t) 3. s. aor. of yam restrain; dán gen, of dám house (= dam-s).

c. The labial m as a rule represents IE. m; e.g. naman, Lat. nomen. It is by far the commonest labial sound, being more frequent than the four labial mutes taken together.

f. The pure nasat. Distinct from the five class nasals is the pure nasal, variously called Anusyara and Anunasika, which always follows a vowel and is formed by the breath passing through the nose unmodified by the influence of any consonant. The former is usually written with a dot before consonants, the latter as w before vowels. The proper use of Amisvara is not before mutes, but before sibilants and h (which have no class nasal). When final, Anusyara usually represents m. sometimes n (66 A 2). Medially Anusvara regularly appears before sibilants and h; e.g. vamsá m. reed; havimsi offerings; mamsa n. flesh; simha m. lion. It usually appears before s, where it always represents m or n; e.g. mamsate 3. s. subj. aor, of man think; pimsanti beside pinasti from pis crush; kramsyate fut. of kram stride. When Annsyara appears before s or h (= IE. guttural or palatal) it represents the corresponding class nusal.

11. The semivowels. The semivowels y, r, 1, v are peculiar in having each a vowel corresponding to it, viz. i, r, l, u respectively. They are called anta(h)sthā in the Prātišākhyas, or 'intermediate', as standing midway between yowels and consonants.

a. The semivowel y is constantly written for i before other vowels within the Veda itself. It also sometimes appears without etymological justification, especially after roots in -ā, before vowel suffixes; e. g. dā-y-i 3. s. aor. pass of dā give. Otherwise it is based either on IE. [= Gk. spiritus asper) or voiced palatal spirant y (= Gk. ξ); e. g. yā-s who (Gk. δ-s), yāj sucrifice (Gk. āγ-ιοs); but yas boil (Gk. ζέω), yūj yoke (Gk. ζυγ-). It is probably due to this difference of origin that yas boil and yam restrain reduplicate with ya in the perfect, but yāj sacrifice with i.

- b. The semivowel v is constantly written for u before other vowels within the Veda itself. Otherwise it seems always to be based on IE. u, that is, on a v interchangeable with u, but never on an IE. spirant v not interchangeable with u.
- c. The semivowel r generally corresponds to IE. r, but also often to IE. 1. As Old Iranian invariably has r for both, it seems as if there had been a tendency to rhotacism in the Indo-Iranian period. In order to account for the Vedic relation of r to 1, it appears necessary to assume a mixture of three dialects; one in which the IE. r and I were kept apart; mother in which IE. I became r (the Vedic dialect); and a third in which IE. r became I throughout (the later Magadhi).

r is secondary when it takes the place of phonetic d (= z) as the final of stems in is and us before endings beginning with bh; e.g. havir-bhis and vapur-bhis. This substitution is due to the influence of external Sandhi, where is and us would become ir and ur.

- a. Motathesis of r takes place when ar would be followed by a or he consonant. It appears in forms of dre so and arj and forth; e.g. drastum to see, samametr one who suppose in battle; also in brahman m. priest, brahman n. destion beside barhis n. serrificial litter (from birh or barh make big); and in a few other words.
- d. The semivowel I represents IE. I and in a few instances IE. r. It is rarer than in any cognate language except Old Iranian, in which it does not occur at all. It is much rarer than r, which is seven times as frequent. A gradual increase of I is apparent in the RV.; thus in the tenth book are found the verbs mlue and tabh, and the nouns toman, lohitá, which in the earlier books appear as mrue sink, rabh seice, róman n, hair, rehitá red. This letter occurs eight times as often in the latest parts of the RV. as in the oldest; and it is seven times as common in the AV. as in the RV. It seems likely that the recorded Vedic dialect

was descended from an Indo-Iranian one in which rhotaeism had removed every 1; but that there must have been another Vedic dialect in which IE. r and 1 were kept distinct, and a third in which IE. r became 1 throughout; from the latter two 1 must have found its way into the literary language to an increasing extent. In the oldest parts of the RV, there are no verbal forms preserving IE. 1, and only a few nouns: (u)loká m. free space, śloka m. call, and smiśla mixed.

a. In the later Samhitas 1 occasionally occurs both medially and finally for d; e. g. fie (VS. Kanva) = fde (RV. fie); ball iti (AV.), ef. RV. ball itithd. In a good many words t is probably of foreign origin.

12. The abilants are all voiceless, but there are various traces of the earlier existence of voiced sibilants (cp. 7 a 3; 8; 15, 2 k). There is a considerable interchange between the sibilants, chiefly as a result of assimilation.

a. The palatal sibilant & represents an IE. palatal (mute or spirant). Besides being the regular substitute for dental s in external Sandhi before voiceless palatals (e. g. indras ca), it occasionally represents that sibilant within words by assimilation; e. g. svášura (Lat. voca) futher in-lase; šašā (IE. haso) m. hare. Sometimes this substitution takes place, without assimilation, under the influence of allied words, as in kóša m. hair beside késara (Lat. caesarica). It is also to some extent confused with the other two sibilants in the Samhitas, but here it interchanges much oftener with a than with s. Before s the paiatal & becomes k, regularly when medial, sometimes when final; e. g. dfk-5-a-se 2, s. aor. subj. mid., and -dfk[n] nom. s. from drš sec.

b. The corobral a is, like the cerebral mutes, altogether secondary, always representing either an original palatal or an original dental sibilant. Medially it represents the palatala ŝ (= I-Ir. ŝ) and j (= I-Ir. ŝ) and the combination ks before the cerebral tenues t the (themselves produced from dental tenues by this s); e.g. mas-ta from mas be lost; mrs-ta s. s. impf., from mrj wipe; tas-ta from take hew.

Medially it is regularly, and initially very frequently, substituted for dental s after vowels other than a and after the consonants k, r, s; e.g. tisthati from stha stand; su-sup-ur 3. pi. pi. from svap sleep; rsabhá m. bull; uksán m. or; varsá n. rain; havis-su in oblations; ánu stuvanti they praise; go-sani winning cattle; divi san being in heaven.

Occasionally a represents dental a as a result of assimilation; e.g. sas six (Lat. sex); sat victorious nom. s. from sah occroming.

c. The dental s as a rule represents IE. s; e.g. asva-s horse, Lat. equo-s; ás-ti, Gk. έσ-τε. In Sandhi it is often replaced by the palatal s and still oftener by the cere-

bral s.

13. The breathing h is a secondary sound representing as a rule the second half of an original guttural or palatal aspirate, but occasionally of the dental dh and the labial bh. It usually stands for palatalized gh, this origin being recognizable by the appearance of the guttural in cognate forms; a.g. hán-ti strikes beside ghn-ánti, jaghána; dudróha has injured beside drogha injurious. It sometimes represents an old palatal aspirate (= I-Ir. 2h), as is recognizable by its being replaced as final or before t by a cerebral; e.g. váh-ati carries beside á-vat has carried, údhá (= uz-dhá) for vah-tá. It stands for dh e.g. in gah-ate plunges beside gadha n. ford; hi-ta placed beside dhi-ta from dha put. It represents bh in the verb grah seize beside grabh. The various origins of h led to a certain amount of confusion in the groups of forms from roots containing that sound. Thus beside mugdha, the phonetic past participle of muh be confused, appears mudhá (AV.) bewildered.

14. Voiceless spirants. There are three such representing original final s or r. Visarjantya has its proper place in pansa. Jihvamuliya (formed at the root of the tongue) is the guttural spirant and is appropriate before initial voiceless gutturals (k, kh). Upadhmāntya (on-breathing) is the bi-labial spirant f and appears before voiceless labials (p, ph). Visarjantya may take the place of the latter two, and always does so in the printed texts of the Samhitas.

15. Ancient pronunciation. As regards the pronunciation prevailing about 500 n.c. we have a sufficiently exact knowledge derived from the transcription of Sanskrit words in foreign languages, especially Greek; from the information centained in the old grammarians, Panini and his school; and especially from the detailed statements of the Pratisakhyas, the ancient phonetic works dealing with the Samhitas. The internal evidence supplied by the phonetic changes occurring in the language of the texts themselves and the external evidence of comparative philology justify us in concluding that the pronunciation in the period of the Samhitas was practically the same as in Panini's time. The only possible exceptions are a very few doubtful points. The following few remarks will therefore suffice on the subject of pronunciation:

1. a. The vowels. The simple vowels i, u and a were pronounced as in Italian. But u in the time of the Pratisakhyas was already sounded as a very short close neutral vowel like the u in English but. It is, however, probable from the fact that the metre hardly over admits of a being elided after e and o in the RV., though the written text drops it in about 75 per cent. of the occurrences, that at the time when the hymns were composed the promunciation of a was still open, but that, at the time when the Samhita text was constituted, the close pronunciation was already becoming general.

The vowel r, now usually sounded as ri (an early pronunciation as shown by the confusion of r and ri in ancient inscriptions and MSS.), was in the Samhitas pronounced as a vocalic r, somewhat like the sound in the final syllable of the French chambre. It is described in the RV. Pratisakhya as containing an r in the middle. This agrees with ere, the equivalent of r in Old Iranian.

The very rare vowel 1, now usually pronounced as 1ri, was in the Samhitas a vocalic 1, described in the RV. Pratisakhyu

as corresponding to I representing an original r.

b. The diphthongs o and o were already prenounced as the simple long vowels ē and ō in the time of the Pratišakhyas; and that this was even the case in the Samhitas is shown by the fact that their Sandhi before a was no longer ay and av, and that the a was beginning to be elided after a and o. But that they represent the original genuine diphthongs ai and au is shown by the fact that they are produced in Sandhi by the coalescence of a with i and u.

The diphthongs at and an are at the present day pronounced as at and an, and were so pronounced even at the time of the Pratisakhyas. But that they etymologically

represent at and au is shown by their Sandhi.

c. Lengthened vowels. The vowels i and u were often pronounced long before suffixal y; e.g. sū-yā-te is pressed (√su); janī-yānt desiring a wi/e (jāni); also before r when a consonant follows; e.g. gīr-bhis (but gir-as); a, i, u often become long before v; e.g. ā-vidh-yat he wounded (a is augment); ji-gī-vāms having conquered (√ji); rtā-van observing order (rtā); yā-vant how great; as compensation for the loss of a following consonant; e.g. gū-dhá for guh-tā (15, 2k); they are also often pronounced long for metrical reasons; e.g. śrudhi hávam hear our prayer.

d. Svarabhakti.¹ When a consonant is in conjunction with r or a nasal, the metre shows that a very short vowel must often be pronounced between them; e.g. indra = indra; yajñá = yajaná sacrifice; gnå = ganá soman.

A term used in the Pratisakhyas and meaning ' vowel-part'.

Described by the Pratisakhyan as equal to §, §, or § more in length and generally as equivalent to a in sound.

c. Loss of vowels. With very few exceptions the only vowel lost is initial a which, in one per cent. of its occurrences in the RV, and about 20 per cent. in the AV, and the metrical portions of the YV., is dropped in Sandhi after e and c. In a few words the disappearance of initial a is prehistoric; s.g. vi bird (Lat. avi-s); santi they are (Lat. sant).

f. Hiatus. In the written text of the Samhitas hiatus, though as a rule tolorated in diphthongs only, appears in Sandhi when a final s, y, v has been dropped before a following vowel; when final i, ū, e of dual endings are followed by vowels; and when a remains after final e

and o.

Though not written, hiatus is common elsewhere also in the Samhitas: y and v must often be pronounced as i and u, and a long vowel or diphthang as two vowels, the original vowels of contractions having often to be restored both within a word and in Sandhi; e.g. jyéstha mightiest as jyá-istha (= jyá-istha from jyá be mighty).

Consonants. a. The aspirates were double sounds, consisting of mutes followed by a breathing; thus k-h is pronounced as in 'ink-horn'; t-h as in 'pot-house'; p-h as in 'top-heavy'; g-h as in 'log-house'; d-h as in 'mad-house';

b-h as in 'Hoh-house'.

b. The gutturals were no doubt velars or sounds produced by the back of the tongue against the soft palate. They are described by the Pratisakhyas as formed at the 'root of the tongue' and at the 'root of the jaw'.

c. The palatals c, j, ch are pronounced like ch in 'church',

in 'join', and ch in the second part of 'Churchill'.

d. The cerebrals were pronounced somewhat like the so-called dentals t, d, n in English, but with the tip of the tongue turned farther back against the roof of the mouth. They include the cerebral 1 and 1h which in Rigyedic texts take the place of d and dh between vowels. The latter occurs medially only; the former finally also.

Examples are: ilā refreshment; turā-ṣāļ abhi-bhūtyójāḥ; ā-ṣāṭha invincible.

c. The dentals in the time of the Pratisakhyas were post-dentals, being produced by the tongue, according to their description, at the 'root of the teeth' (danta-mula).

f. The class nasals are produced with organs of speech in the same position as for the formation of the corresponding mutes while the breath passes through the nose. The pure nasal, when called Anunasika, combines with the preceding vowel to form a single sound, a nasalized vowel, as in the French 'bon'; when called Anusvara [aftersound), it forms in combination with the preceding vowel two successive sounds, a pure vowel immediately followed by the pure nasal, though seeming to form a single sound, as in the English 'bang' (where, however, the nasal is guttural, not pure).

g. The semivowel y is the voiced palatal spirant produced in the same place as the palatal vowel i. The semivowel v is described by the Pratisakhyas as a voiced labio-dental spirant. It is like the English v or the German w. The semivowel r must originally have been a cerebral, as is shown by its phonetic effect on a following dental n. By the time of the Pratisakhyas it was pronounced in other positions also. Thus the RV. Pratisakhya speaks of it as either post-dental or produced farther back (but not as

cerebral).

The semivowel 1 is described in the Pratisakhyaa as pronounced in the same position as the dentals, which

means that it was a post-dental.

h. The sibilants are all voiceless. The dental s sounds like s in 'sin'; the cerebral s like sh in 'shan' (but with the tip of the tongue farther back); while the palatal is produced midway between the two, being the sibilant pronounced in the same place as the spirant in the German ich. Though the voiced sibilants z, z (palatal = French j),

CHAPTER II

RULES OF SANDHI OR EUPHONIC COMBINATION OF SOUNDS

16. Though the sentence is naturally the unit of speech, which forms an unbroken chain of syllables euphonically combined, it is strictly so only in the prose portions of the AV. and the YV. But as the great bulk of the Vedas is metrical, the editors of the Samhita text treat the hemistich (generally consisting of two Padas or verses) as the suphonic unit, being specially strict in applying the rules of Sandhi between the verses forming the hemistich. But the evidence of metre supported by that of accent shows that the Pada is the true suphonic unit. The form which the final of a word shows varies according as it appears in pausa at the end of a Pada, or in combination with a following word within the With the former is concerned the law of finals in pausa, with the latter the rules of Sandhi. Avoidance of hiatus and assimilation are the leading principles on which the rules of Sandhi are based.

Though both are in general founded on the same phonetic laws, it is necessary, owing to certain differences, to distinguish external Sandhi, which determines the changes of final and initial letters of words, from internal Sandhi, which applies to the final letters of verbal roots and nominal stems when followed by certain suffixes and terminations.

a. The rules of external Sandhi apply with few exceptions (which are survivals from an earlier stage of external Sandhi) to words forming compounds, and to final letters of nominal stems before the case-undings beginning with consonants (-bhyām -bhis, -bhyas, -su) or before secondary (182, 2) suffixes beginning with any consonant except y.

A. External Sandhi.

Classification of Vowels.

17. Vowels are divided into

- A. I. Simple vowels: a ā; i ī; u ū; ŗ ŗ; ļ.
 - 2. Guṇa vowels: a ā; e o ar al.
 - 3. Vrddhi vowels: ā ; ai ; au ; ār.1
- a. Guna (secondary quality) has the appearance of being the simple vowel strengthened by combination with a preceding a according to the rule (19a) of external Sandhi (except that a itself remains unchanged); Vrddhi (increase), of being the Guna vowel strengthened by combination with another a.2
- B. 1. Vowels liable to be changed into semivowels; i, i; u, ū; γ³ and the diphthongs e, ai, o, au (the latter half of which is i or u): consonantal vowels.
- Vowels not liable to be changed into semivowels (and only capable of coalescence): a, ā: unconsonantal vowels.

Combination of Final and Initial Vowels.

18. If the same simple vowel (short or long) occurs at the end of one word and the beginning of the next, contraction resulting in the long vowel' is the rule in the written text of the Samhitas. Thus ihasti = iha asti; indra = indra a; tvagne = tva agne; vidam = vi idam; süktam = su uktam.

The Vrildhi form of I (which would be al) does not occur.

* F never appears under conditions rendering it liable to be changed into r (ep. 4 a, p. 4).

* F does not occur because FF never meet in the Sarphitas, and final F does not even occur in the RV.

In this vowel gradation, as Comparative Philology shows, the Guna rowel represents the normal stage, from which the simple rowel was reduced by loss of accent, while Vpddhi is a lengthened variety of Guna (5a). The reduction of the syllables ys, va, za (which are parallel with the Guna stage) to the corresponding vowels I, u, r (5b) is termed Samprasarana (distraction).

a. The contraction of å+a and of ů+ů occasionally does not take place, even in the written text of the RV., both between the Padas of a hemistich and within a Pada; thus manişå i agnih; manişå abhi; viļů utá; sú ùrdhváh; and in a compound, su-ūtáyah.

b. On the other hand, the metre requires the contracted vowels of the written text to be restored in pronunciation. In such cases the restored initial is long by nature or position, while the preceding final, if long, must be shortened. Thus casat is pronounced as ca asat; carcata as as arcata; mapch as ma apch (for ma apch); mrlatidiffe as mrlatidiffe; yantindavah as yanti indavah; bhavantūkṣaṇah as bhavantu ukṣaṇaḥ. When the first word is a monosyllable (especially vi or hi), the written contractions i and ū are usually to be pronounced with hiatus; thus hindra as hi indra.

19. a and a

a. coalesce with the simple vowels is and a to the Guna vowels o and os respectively; e.g. thoha = iha iha; pitéva = pitâ iva; ém = â im; obhâ = â ubhâ. They are never contracted to ar in the written text of the RV. or VS.; but the metre shows that the combination is sometimes to be pronounced as ar, for instance in the compound sapta-ṛṣāyaḥ the seven seers = saptarṣāyaḥ.

Because of the precedical rule that a long vowel is always shortened before another vowel. Cf. note 5.

Occasionally 5 + 1 remain uncontracted in the written text of the RV., se irá irám, pibă imam, ransyā ibá.

^{*} This contraction is a surrival because & and o are simple long vowels, but they were originally - \$1, \$0.

But in many instances where the contraction is written, the miginal simple rowels must be restored with histon; thus subhagosah = subhago usah,

is a lways shortened or resalized before y in the written text; u.g. tetha such (for texts); vipunyalli straya (for vipanya).

b. coalesce with Guna vowels to Vrddhi; e.g. aibhib
 = å ebbib.

c. are absorbed by Vrddhl vowels; c. g. sómasyaušijáh
 sómasya aušijáh.

20. The simple consonantal vowels i and û before dissimilar vowels or before diphthongs are regularly changed to the semivowels y and v respectively in the written text of the Samhitās; e.g. práty āyam = práti āyam; jánitry ajījanat = jánitrī ajījanat; á tv ótā = á tu ótā. But the evidence of the metre shows that this y or v nearly always has the syllabic value of 1 or ú. Thus vy úṣāḥ must be read as ví uṣāḥ; vidátheṣv añjān as vidátheṣu añjān.

a. Final r (which does not occur in the RV.) becomes r before a dissimilar vowel; an example is vijuatr otat = vijuatr etat (ŚB.).

21. The Guna vowels e and o

a. remain unchanged before a, which is generally elided in the written text of the Samhitas, but according to the evidence of the metre, must almost invariably in the RV., and generally in the AV. and YV., be pronounced, whether written or not. In devise aptural (i. 3°) the a is both

a Because 1 and a are presentically shortened before a following

vowel (p. 22, note 1).

* In the RY, it is clided in about 75 per cent., in the AV, in about

56 per cent, of its occurrences.

In the RV, it must be pronounced in 90 per cent., in the AV, and the metrical parts of the YV. In about 80 per cent. of its occurrences.

^{*} A instead of contracting with a is sometimes masalized before it; aminantam évaih (for a e); upásthám éká (for a e). Again a is sometimes elided before e and o; as up'esatu (for a e), yath'oliga (for a o).

^{*} The exceptional treatment of c in stotave ambyam for stotave ambyam is a survival showing that the Saudhi of c and c before a was originally the same as before other vowels.

The frequent cliaion of the a in the written text compared with its almost invariable resention in the original text of the RV, indicates a period of transition between the latter and the total clizion of the post-Vedic period.

written and pronounced; in sûnávé 'gne (i. 1') it must be

b. before every other vowel (or diphthong) would naturally become ay and av (the form there but the former drops the semiyowel throughout, while the latter does so only before h; e.g. agna ind (for agnay); váya ukthébhih (for váyav); but váyav á yáhi.

> 22. The Vrddhi vowels at and au are treated before every vowel (including a) or diphthong exactly in the same way as e and o before vowels other than a. Thus ai becomes a (through ay) throughout, but au only before u " (through av); e. g. tásma aksi (for tásmay), tásma indraya; sujihva upa (for sujihvav), but tav a, tav indragni,

> a. The (secondary) hiatus caused by the dropping of y and v in the above cases (21 b and 22) as a rule remains. But further contraction is sometimes actually written in the Samhitas; e.g. sártavájáu for sártavá ájáu (through sartaváy for sartavái); vásáu for vá asáu (through váy for vái). Sometimes, again, the contraction, though not written, is required by the metre. Thus ta indra must be pronounced as tendra, and gostha upa (AV.) for gosthe upa (through gostháy) as gosthópa.

Irregular Vowel Sandhi.

23. Vrddhi instead of Guna results from the contraction of a, the proposition a (in the AV, and VS.) with initial r in arti = a rti and in archatu = a rchatu. In the case of the latter verb, the TS-extends this contraction to propositions ending in a; uparchati = upa rehati and avarchati = ava rebáti.

¹ Because e and e were originally = 11 and 144.

This is also the Sandhi of the AB, and KB.

- b. The preposition prá (in the RV.) with initial i in práişayúr = prá işayúr.
- c. The augment a with the initial vowels i, u, r; e.g. aichas 2. s. impf. of is wish; aunat 3. s. impf. of ud wet; arta 3. s. sor. of r go.

Absence of Vowel Sandhi.

- 24. The particle u is unchangeable in pronunciation before vowels, though as a rule written as v after a consonant; e.g. bhá u améáve, but ávéd v indra. When it combines with the final å of a particle to o, in $\delta = \hat{a}$ u, atho = atha u, uto = uta u, mo = má u, it remains unchanged even in the written text; e.g. átho indraya.
- 25. a. The ī and ū of the dual (nom. acc.) never change to y and v. This dual ī is never to be pronounced short, but the ū sometimes is; e.g. hārī (⋄ −) rtāsya, but sādhū (⋄ ∘) asmai. This ī may remain before i, as in hārī iva, but in several instances the contraction is written, as in ródasīmė = ródasī imė, while in several others, though not written, it must be pronounced.
- b. The rare locatives singular in i and ū are also regularly written unchanged in the KV., but they seem always to be treated as prosodically short.
- c. The i of the nom. plur. m. (of the pronoun asau) umi is always given as unchangeable in the Pada text (ami iti), but it never happens to occur before a vowel in the RV.

This is purhaps a survival of a prehistoric contraction of a (the original form of the augment) with 1, u, r to al, an, ar.

The term applied by the native phoneticians to unchangeable vowels is pragrhya separated. Such vowels are indicated in the Pada text by an appended iti. u is always there written in its lengthened and nasalized form as um iti.

It is occasionally written unchanged in its lengthened form even after a consonant, as tam a akrawan.

[·] Except védy asyám, to be promunéed védl asyám.

- a. The i of the nom. s. in prihivi, prihu-jrayi, samrajili rarely, of the instr. susami once, and of the instr. uti often, remains unchanged before vowels; i s. g. samrajili adhi, susami abhuvan.
- 26. The diphthong e is unchangeable in various nominal and verbal forms.
- a. The e of the nom. acc. dual (= a+i), fem. and neut. of a stems, is not liable to Sandhi;³ e.g. ródasi ubhé rghāyámānam.
- b. The verbal dual e of the 2. 3. pres. and perf. mid. never combines, though it is nearly always prosedically shortened; e.g. parimamnathe asman.
- c. The e of the locative of the pronominal forms two in thee, asme in us, yuşmo in you are unchangeable; e.g. two it; asme ayuh; yuşmo ittha.

Combination of Final and Initial Consonants.

27. The external Sandhi of consonants is primarily and almost exclusively concerned with the assimilation of a final to a following initial sound. Since the Sandhi of final consonants generally speaking starts from the form they assume in paush, it is necessary to state the law of allowable finals at the outset. That law may be formulated as follows: only unaspirated hard mutes, assals, and Visarjantya are tolerated, and palatals are excluded, as finals. By this law the thirty-nine consonants classified in § 8 are reduced to

¹ The unchangeableness of the vowel here being only occasional is not indicated with its in the Pada text.

³ Except disapyome for disapys mae, as it is also probably to be pronounced.

² Under the influence of the nominal dual e; for there was originally no difference between this dual e and any other e in middle forms, such as the dual value, sing, te, and the plur, ante.

^{*} Also used as dat. in the RV.

³ They are always written with its in the Pada text.

^{*} Final n and r are, however, to a considerable extent treated not on the bases of their passal form, but of etymology.

the following eight as permissible in pausa:—k, h; t; t, n; /p, m; Visarjanīya.

The aspirate and soft mutes (8 b) are eliminated, leaving only hard unaspirated mutes to represent them. The palatals (8 b β), including § (8 d), and h (8 c), are replaced by k or † (5 by h).

 ε (3 d) is replaced by t, s (3 d) and r (3 c) by Visarjaniya. The masal η (3 b γ) and the three semivowels y, 1, v (3 c) do not occur.

28. The rule is that only a single consonant may be final. Hence all but the first of a group of consonants must be dropped; e.g. ábhavan 3. pl. impf. were (for ábhavant); tán acc. pl. those (for táns); tudán striking (for tudánts); prán forward (through pránk for pránc-s); áchán 3. s. aor. has pleased (for áchantst).

a. k. t. or t. when they follow an r and belong to the root, are allowed to remain; e.g. vark 3. s. ner. of vribend (for vark-t); urk nom. s. of urj strength; a-mart 3. s. impf. of mrj wive; a-vart 3. s. acr. of vrt turn; su-hart nom. s. of suhard friend.

a. There are seven instances in the Sambitas in which a sufficil sort is retained instance of the preceding ratical consonant. (I) a thus appears in the following four nominatives sing.; sadha-mās beside sadha-māt (for sadha-mād-s) companion of the feest; ava-yās (for ava-yāj-a) f. sacrifeiol share; āvayās (for āvayāj-a) m. a kind of priest; puro-dās aprificial cake (for puro-dās-s).2 (2) sort similarly appears in the following four singular verbal preterite forms: a-yā-a (for a-yaj-a) beside a-yāj 2 a, nor, of yaj sacrifice; a-srās (for a-sraj-a) 2 a nor, of spi sacrifice; a-srās (for a-sraj-a) 2 a nor, of spi sacrifice; a-srās (for a-sraj-a) 2 a nor, of spi sacrifice; a-srās (for a-sraj-a) 2 a nor, of spi sacrifice; a-srās (for a-sraj-a) 2 a nor, of sraj-fall.

The a is probably due to the analogy of nominatives, like mis monn, draving-di-a result-grey, i.e.

[?] The only instance of a suffix remaining after r is in dar-1 3, a sor, of dr elems beside 6-dar 2, a. (for 4-dar-s).

^{*} The appearance of a or 1 here is due to the beginnings of the

Classification of Consonants.

29. The assimilation, of which the application of the rules of consonant Sandhi consists, is of two kinds. It is concerned either with a shift of the phonotic position in which a consonant is articulated, or with a change of the quality of the consonant. Hence it is necessary to understand fully the classification of consonants from these two aspects. In § 3 b c d (cp. 15, 2b-h) an arrangement according to the place of articulation is given of all the consonants except four, the breathing h and the three voiceless spirants, which are phonetically described in § 15, 2 ij.

o. Contact of the tongue with the throat produces the gutturals, with the palate the palatals, with the roof of the mouth the cerebrals, with the teeth the dentals, while

contact between the lips produces the labials.

b. In forming the masals of the five classes, the breath partially passes through the nose while the tongue or the lips are in the position for articulating the corresponding tenuis. The real Anusvara is formed in the nose only, while the tongue is in the position for forming the particular vowel which the Anusvara accompanies.

a. The semivowels y, r, l, v are palatal, cerebral, dental, and labial respectively, pronounced in the same position as the corresponding vowels i, r, l, u, the tongue being in partial contact with the place of articulation in the first three, and the lips in partial contact in the fourth.

d. The three sibilants are hard spirants produced by partial contact of the tongue with the palate, roof, and teeth respectively. There are no corresponding soft sibilants (English z, French J), but their prehistoric existence may be inferred from various phenomena of Sandhi (cp. 15, 2 k a).

tendency to normalize the terminations so as to have a in the 2 s. and t in the 3. s. Some half-dozon examples of this have been found in the Brahmanas; e.g. \$-ves 2 s. Impf. (- \$-ved-s) from vid know.

c. h and h are respectively soft and hard spirants produced without any contact, and articulated in the position of the vowel that precedes or follows. h occurs only before soft letters, h only after vowels and before certain hard letters.

30. Quality of consonants.

Consonants are

1. either hard (surd, voiceless): k kh, c ch, t th, t th, p ph; á s s; h h h (3);

or soft (sonant, voiced); all the rest (8) (besides all the

vowels and diphthongs).

2. either aspirated: kh gh, ch jh, th dh lh, th dh, ph bh, h h h, ś s s;

or unaspirated : all the rest.

Hence the change of c to k is a change of the position of articulation (palatal to guttural), and that of c to j is a change of quality (hard to soft); while the change of c to g (hard palatal to soft guttural) or of t to j (hard deptal to soft

palatal) is one of both position and quality.

31. It is essential to remember that consonant Sandhi cannot be applied till finals have been reduced to one of the eight allowable sounds (27). The latter are then modified without reference to their etymological value (except partially in the case of n and Visarjantya). Only six of these allowable finals occur at all frequently, viz. k, t, n, p, m, and Visarjantya, while the cerebral t and the guttural n are rare.

I. Changes of Quality.

32. A final consonant (that is, a mute or Visarjantya) is assimilated in quality to the following initial, becoming soft before soft initials, and remaining hard before hard initials (consonants).

Hence final k, t, t, p before vowels and soft consonants become g, d, d, b respectively; e.g. arväg rådhah (through arväk for arvåe); havyavåd juhväsyah (through -våt for -våh); sål urvih (through såt for sås: cp. 3 δ γ); gámad vájebhíh (for gámat); aguid rtayatáh (through aguit for aguidh); tristúb gáyatri (through tristúp for tristúbh); abjá (for ap-já).

- 33. Final k, t, t, p before n or m may, and in practice regularly do, become the nasal of their own class; e.g. pránaň mártyasya (through pránag for prának); virán mitrávárnnayoh (through virád for virát); sán-navati (TS.) (through sát-) for sás-navati; äsin nó (through asid for asit); tán mitrásya (for tád); trikakúm niváriat (through trikakúb for trikakúp from trikakúbh).
- 34. Final t becomes 1 through d; e, g, singal lómnah (for ángāt).
- 35. Since the nasals have no corresponding hard sounds, they remain unchanged in quality before initial hard sounds. The guttural h, which is rare, remains otherwise unmodified also (cp. 52); but it may before sibilants insert a transitional k, e.g. pratyank sa beside pratyan sa. Final m is liable to change of position before all consonants (42). Final dental n is liable to change before vowels (42, 52), palatals, dentals, the semivowel 1, and sometimes p (40).
- 36. The dental nasal n remains unchanged before (1) the gutturals k, kh, g, gh; (2) the labials p, ph, b, bh, m; (3) the soft dentals d, dh, n; generally also before t (40, 2); (4) the semivowels y, r, v, and the breathing h; (5) the cerebral and the dental sibilants s and s.
- a. Before ş and s a transitional t may be inserted, a.g. áhan-t sáhasā; tán-t sám.

II. Changes of Position.

37. The only four final consonants (27) liable to change of position are the dental t and n, the labial m, and Visarjaniya.

¹ The palatal and cerebral masals, us has already been stated, do not occur as limits.

Before p it semetimes becomes mh; ep. 40, 5.

a. The two dentals become palatal before palatals.1

b. Visarjantya and m adapt themselves to the phonetic position of the following consonant.

1. Final t.

38. Final t before palatals (c, j, ch, ś) is changed to a palatal (c or j); e.g. tác cáksuh for tát cáksuh; yātayáj-jana for yātayát-jana; rohic chyāvá for rohit syāvā.

2. Final n.

39. Final n before vowels is changed, after a long vowel, to Anusvara: if the preceding vowel is a, to m, if it is I, û, r, to m; e.g. sárgam íva for sárgan; vidvám agne for vidván; paridhím áti for paridhín; abhisum tva for abhisun; ným abhi for ným.

40. 1. Final n before all palatals that occur becomes palatal fi; e.g. ŭrdhvan carathaya for ŭrdhvan; tan juactham for tan; vajrin snathihi for vajrin; but since before s a transitional t may be inserted, vajrnt snathihi may (through vajrino snathihi) become vajrn chnathihi.

a. Before c the palatal sibilant is sometimes inserted, in the RV., the preceding n then becoming Anusvara. This

Final dentals never come into contact with initial combrals in the Samhitas. No initial corebral mutes occur in the RV., and even the cerebral sibilant a occurs only in sag six and its compounds, and once in sai for sai from sah.

[?] On the change of a to ch after c see 53.

Both in and für here represent original as through nh, the Sandhi of h being here the same as that of ah lh nh 7h before vowels. In in an remain unchanged at the end of a Pada (as being in pausa) before a vowel; e.g. devayanan standrah (i. 727).

^{*} The occurs only once, otherwise remaining unchanged as Pn, because two r sounds are avoided in the same syllable (cf. Vedic Grammar, § 79).

^{*} That is, t before a becomes o (38).

[&]quot; That is, after a initial a may become ch (53).

There are no examples of the inserted sibilant before ch in the Samhilian.

insertion takes place, only when the sibilant is etymologically justified, almost exclusively (though not without exception even here before ca and cid; e.g. anuyājāmā ca, amonāmā cit. In the later Samhitās the inserted sibilant becomes commoner, occurring even where not etymologically justified.

- 2. Final n usually remains unchanged before dental t,*
 e.g. tvåvän tmånä; but the dental sibilant is sometimes
 inserted in the RV., the preceding n then becoming
 Anusvära. This insertion takes place, only when the
 sibilant is historically justified; e.g. ävådams tvåm (for
 ävådan). In the later Samhitäs the inserted sibilant
 becomes commoner, occurring even where not etymologically justified.
- Final n before initial I always becomes nazalized 1;
 g. jigīvāl laksám.
- 4. Though final n generally remains unchanged before y, r, v, h (36, 4), ūn, ūn, ūn sometimes become ūm, īmr, ūmr as before vowels (39); e.g. devān havāmahe; but svāvām yātu (for svāvān); dadvām vā (for dadvān); pīvo-annām rayīvēdhah (for annān); paņimr hatam (for paņin); dāsyūmr yonau (for dasyūn).
- 5. Final n when etymologically representing ns sometimes becomes mh before p (36, 2); thus nṛmh pāhi (for nṛm); nṛmh pātram; svátavāmh pāyuh (for svátavām).

3. Final m.

41. Final m remains unchanged before vowels; e.g. agnim ile I praise Agni.

I That u, in the nom, a and acc. pl. m., which originally ended in na.

E.g. pasan on sthatfil coratham (1. 726).

As in the 3. pl. impf., e.g. abhavan (originally abhavan a and the voc. and loc. of n stems, e.g. rajan (which never ended in a).

^{*} No initial th occurs in the EV.

a. In a very few instances the m is dropped and the vowels thereupon contract. This Sandhi is mostly indicated by the metre only; thus rastram in in must be pronounced rastraha. It is very rarely written, as in durgahaith for durgaham eth. The Pada text, however, neither here (durgaha eth) nor elsewhere analyses a contraction in this way.

42. Final m before consonants is changed

 before the semivowel r, the three sibilants s, s, s and the breathing h to Anusyara; e.g. hótáram ratnadhátamam (for hótáram); várdhamánam své (for várdhamánam); mitrám huve (for mitrám).

2. before y, I, v it becomes assalized y, I, v; but the printed texts regularly use Anusvara instead; e.g. sam

yudhi; yajñám vastu."

3. before mutes it becomes the class nasal, and n before n°; e.g. bhadrán karisyási; tyáñ camasám; návan tvástuh; bhadrán nah. Most MSS, and the printed texts, however, represent this assimilated m by Anusvara°; e.g. bhadrám karisyási; tyám camasám; návam tvástuh; bhadrám nah.

a. This Sandhi is identical with that of n before the palatals c, j, ch (40) and the soft dentals d, dh, n (86, 3), and of a before n (83).

The Taittiriya Pratisakhya allows the optional use of Annavara

before these semivowels.

· Before labiale it of course remains.

* This assimilation before n being identical with that of d, led to ambiguity in some instances and consequent wrong analysis by the Padapatha.

^e Max Müller in his editions prints Anusvāra throughout, even before labials; Anfrecht has Anusvāra except before labials, where

he retains m.

Annavára seems to have been used originally before the sibilants and h only. Compounds like sam-ráj show that m ariginally remained unchanged before r (498).

^{*} Forms with internal m like yam-yamana and apa-minkta show that m originally remained unchanged in external Sandhi before y and 1; and forms like jagan-van (from gam 10) point to its having at one time become n before v in Sandhi.

4. Final Visarjaniya.

- 43. Visarjantya is the spirant to which the hard s and the corresponding soft r are reduced in pausa. If followed by a hard sound,
- I. a palatal (c, ch) or a dental (t) mute, it becomes the corresponding sibilant; e.g. deváš cakṛmá (through deváh for devás); půš ca (through půh ca for půr ca); yás to (for yáh); ánvibhis tánă (for hhih).
- a. Visarjaniya, if preceded by i and ii, before dental t often becomes cerebral a, which corotralizes the following initial t to t. In the RV. this occurs chiefly, and in the later Vedas only, before pronouns; e.g. agnic to; trains tam; also nakis januan. In compounds this change takes place in all the Samhitas; e.g. due-tara hard is puzz.
- 2. a guttural (k, kh) or labial (p, ph) mute, it either remains or becomes Jihvamuliya (h) before the gutturals and Upadhmaniya (h) before the labials; e.g. visnoh karmani (for visnos); indrah pañes (for indras); punahpunah (for punar); dyauh pṛthivi.
- o. After a it often, in the KV., becomes s, and safter i, ū, ë; z e.g. divás pari; pasnivatas kṛdhi; dyáus pitā. In compounds this change takes place regularly in all the Samhitas; s.g. paras pā hir protesting; havis pā denking the effecting i dus-kft evil-doing, dus-pad svil-hoded.
- 8. a simple sibilant, it either remains or is assimilated; e.g. vah sivatamah or vas sivatamah; dévih sat or dévis sat; nah sapatnah or nas sapatnah; punah sam or punas sam. Assimilation is undoubtedly the original Saudhi;

This combination (in which Visarjaniya represents original r) is contrary to etymology, but is universal in sontence Sandhi and is subject to only two exceptions in compounds; svar-cakes and svar-canes.

^{*} The only exception in the RV. is catua-irimiat thirty-fear.

This treatment before gutturnly and labials corresponds to that before t (1 a), and was doubtless the original one in sentence Sandhi.

^{*} This combination (in which Visarjantya represents original x), though contrary to etymology, is universal in external Sandhi; but

but the MSS, usually employ Visarjantya and European editions regularly do so.

a. Before a sibilant immediately followed by a hard mute, a final Visarjantys is dropped; a.g. mandibhi stomebhih (through mandibhih for mandibhis); du-stati f, ill-probs (for dus-stati). The dropping is prescribed by the Philishkhyas of the RV., the VS., and the TS., and is applied by Anfrecht in his addition of the RV.

 Before a sibilant immediately followed by a nazal or samivowel, a final Visarjantya is optionally dropped; a.g. kyta árávah (for kytah);

ni-svaram (through nin- for nis-).

44. Visarjantya (except after a or a) before a soft sound (vowel or consonant) is changed to r; e.g. fsibhir idyah (through fsibhih for fsibhis); agnir hóta (through agnih for agnis); paribhúr ási (through -bhúh for -bhús).

45. 1. The final syllable āḥ (= ās) drops its Visarjantya before vowels or soft consonants; e.g. sutā imē (through sutāḥ for sutās); viśvā vi (through viśvāḥ for viśvās).

2. The final syllable ah (= as)

a. drops its Visarjantya before vowels except a; e.g. khya å (through khyah for khyaa).

b. before soft consonants and before a, is changed to o, after which a may be elided (21 a); e.g. indavo vām (through indavah for indavas); no áti (through nah for nas) or nó 'ti.

46. The final syllables ah (= ar) and āḥ (= ār), in the comparatively few instances in which the Visarjaniya represents an etymological r, do not form an exception (45) to the general rule (44); e.g. prātár agnih; pūnar nah; svār druhāh; vār avāyatī.

in compounds the original r frequently remains; e.g. vanar-aid, dhur-aid, &c. This survival shows that r originally remained before abiliants in soutence Sandhi.

It is original in dvår door, vår protector, vår muter; ähar day, usår dama, üdhar udder, vädhar umpra, vänar mond, svär light; untär millim, avär doma, prinar ugude, prätär mill; the voc. of retenue, e.g. bhråtar; the 2.3. m of past tenues from roots in r, e.g. ävar, from vr coor.

47. r followed by r is always dropped, a preceding short vowel being lengthened; e.g. pūnā rūpāṇi for pūnar.¹

48. The three pronouns (nom. m. s.) sah that, syah that, esah this, drop the Visarjantya before all consonants; e.g. sa vanani, sya dutah, esa tam. The Visarjantya is here otherwise freated regularly; at the end of a Pada, e.g. padista sah cakra esah i, and before vowels, e.g. so spah, eso asura, eso 'mandan (for amandan); sa osadhih, esa indrah.

at so, however, generally combines in the RV, with a following vowel; e.g. sasmai for sa asmai; sod for sa id; sausadhih for sa baadhih.

Sandhi in Compounds.

49. The euphonic combination at the junction of the members of compounds is on the whole subject to the rules prevailing in external Sandhi. Thus the evidence of metre ahows that contracted vowels are often to be pronounced with hintus when the initial vowel of the second member is prosodically long (ep. 18 b); e. g. yuktá-aśva (for yuktáśva) having yoked horses, devá-iddha kindled by the gods (for devéddha), ácha-ukti (for áchokti) invitation.

Compounds have, however, preserved many archaisms of Sandhi which have disappeared from Sandhi in the sentence.

a. In vis-pati land of the house and vis-patni misters of the house a remains instead of the t * required by external Sandhi.

 In sam-raj secretion ruler in appears instead of the Anusvara required before r (42, 1), as in sam-rajantam.

^{&#}x27;In a few instances o appears instead of & (= ar) under the influence of ah as the passal form of neuters in as; e.g. fidho romassm (for fidha = fidhar); also in the compound aho-ratra for aha-.

and, however, twice retains it in the EV.; sah paliknih (v. 2*) and see tava (viii, 2310) for sah.

a gain never occurs in the RV, before a vowel or at the end of

^{*} ris-păti has în post-Vedie Samkrit become vițuati.

- c. A group of compounds formed with dus ill as first member combine that adverb with a following d and n to dù-d (= duy-d) and dù-n (=duy-n) instead of dur-d and dur-n: dù-dàbha (for dus-dàbha) bard to decree, dù-dàs not corshipping (for dus-dàs), dù-dhf malerelest (for dus-dhf); dù-pàsa hard to attein (for dur-nàsa), dù-pàsa (for dus-nàsa) bard to attable and hard to distroy.
- d. Final (etymological) r in the first member is preserved in the BV. before hard sounds where the rules of external Sandhi require Visarjaniya or a sibilant (43): var-karya producing motor; svar-caksas brilliont os light; pur-pati lord of the stronghold, svar-pati lord of tennen; vanar-add and vanar-yad sitting in the wood, dhur-add being on the yele; svar-så winning light; svar-såti acquisition of light. The VS. also has shar-pati lord of day, and dhur-såh bearing the yele.
- e. Radical stome in ir, ur mostly lengthen their vowel before consonants (as they do within the simple word); 2 c.g. dhur-sad being on the yoke, pur-yang leading to the fort.
- 50. Compounds further often contain archaisms which though still existing in external Sandhi are obsolescent and disappear entirely in later periods of the language.
- a. In six compounds scandrá bright retains its old initial sibilant in the second member; e.g. áśva-ścandra brilliant with horses, puru-ścandrá very brilliant. As an independent word it is, excepting three occurrences in the RV., invariably candrá.*
- b. A final s of the first member or an initial s of the second member is cerebralized; e. g. dus-tara hard to cross, duh-saha hard to resist.⁵

¹ But dur- the form required by the later external Sandhi is already commoner in the EV.; e.g. dur-dfsika, dur-naman.

² Nouns ending in radical r retain the r before the ending an of the loc. pl. ; gir-gu, dhùr-su, pùr-gu.

External Sandhi gradually encroaches here in the later Samhitas; e. g. svah-pazi in the SV.

^{*} But gir retains its short vowel in gir-vanas foul of proise and girvahus proised in sung.

^{*} How nearly extinct scandra is as an independent word is indicated by the fact that in the analysis of its six compounds it always appears as candra in the Pedapatha.

In post-Vedic Sanskrit only dustara, duhsaha.

c. A dental n in the second member is cerebralized after r, r, s in the first member:

a simost invariably, whether initial, medial, or final in a root, when a vertal derivative is compounded with a proposition that contains x; s. g. nir-nij f. bright growest, pari-hunts desied, prin-4 m. brook; and

even in suffixes, as pra-yana di Warrate (from ya go).

- B, predominantly in other compounds when the second number is a worked noun; e.g. grama-nl chief of a village, dur-gani dancers, pitryana tradden by the fathers, rakso-han denon-closing; but pure-yavan beside prater-yavan going out corly. Corebratization never takes place to gin the weak form of han killing; nor in aksa-nah tied to the arts, kravya-vahana concepting corpus, carma-musi turner, yuema-nita ted by you.
- y, less regularly when the second mamber is an ordinary (non-vertal) noun; e.g. uru-nass less these, pri-napit great-granden; but candra-nirall sering a brilliant garment, puncy nava ogain connect.
- d. The final vowel of the first member is often lengthened, especially before v; e.g. anná-vrdh prospering by food. This is often due to an old rhythmical tendency (also appearing in the sentence) to lengthen a vowel before a single consonant between two short syllables; e.g. ratha-sah able to draw the car.
- e. Final à or I of the first member is often shortened before a group of consonants or a long syllable; e.g. urnamradas soft as recol (urna); prthivi-stha standing on the carth (prthivi); amiva-catana driving away disease (amiva).

Doubling of Consonants.

51. The palatal ch etymologically represents a double sound and metrically lengthens a preceding short vowel. For the latter reason the RV. Pratisakhya prescribes the doubling of the (in the form of ech) after a short vowel, and, as regards long vowels, after a only, when a vowel follows. This rule is followed by Max Muller in his editions of the RV.; e.g. utá ochadih, a-cchád-vidhans, but me chantsat.

³ The Vedic MSS almost invariably write the simple ch, and this practice is followed by Aufrecht in his edition of the Rigarda and L. v. Schroeder in his edition of the MS. It is also followed in the present work.

52. Before vowels final n and n, if preceded by a short vowel, are doubled; e.g. kidfin indrah; ahann indrah. Though the nasal is always written double, the metre shows that this rule is only partially applied as regards pronunciation in the RV.

a. The compound vysan-sava with stallions in seeds (non) is an exception.

Initial Aspiration.

53. After a final c, înitial s regularly becomes ch; e.g. yac chaknavama for yad saknavama.

 a. The same change occasionally takes place after t; thus vipăt chutudri (for sutudri); turăşât chuşmi (for suşmi).

- 54. Initial h, after softening a preceding k, t, t, p, is changed to the soft aspirate of that mute; e.g. sadhryag ghita for hita; avad dhavyani for avat havyani; sidad dhota for sidat hota.
- 55. If gh, dh, bh, or h are at the end of a (radical) syllable beginning with g, d, or b, and lose their aspiration as final or otherwise, the initial consonants are aspirated by way of compensation; t e.g. from dagh reach the 3. s. injunctive is dhak (for dagh-t); -būdh waking becomes -bhūt; dūh wilking becomes dhūk.

B. Internal Sandhi.

56. The rules of internal Sandhi apply to the finals of roots and nominal and verbal stems before all endings of declension (except those beginning with conscinants of the middle stem; 73 a) and conjugation, before primary suffixes (182, 1) and before secondary suffixes (182, 2) beginning with a vowel or y. Many of these rules agree with those of external Sandhi. The most important of those which differ from external Sandhi are the following:

¹ This is not really compensation but the survival of the original initial aspiration of such roots, which was lost owing to the avoidance of an aspirate at the beginning and end of the same syllable. Hence when the final aspirate disappeared, the initial returned.

Final Vowels.

- 57. In many cases before a vowel i is changed to iy; u and ū to uv; e.g. dhi+e = dhiy-é dat. a. for thought; bhū+i = bhuy-i on earth; yu-yuv-è has joined (/ yu).
- 58. Final r before y becomes ri (154, 3); e.g. kr make; kri-yáte 3. s. pres. pass. is done. Final r before consonant terminations is changed to îr, after labials to ūr; e.g. gr meallow: gīr-yáte is swallowed, gīr-ņá swallowed; pr fill: pūr-yáte is filled, pūr-ņá filled.
- 59. e, ai, o, au are changed before suffixes beginning with vowels or y to ay, ay, av, av respectively; e.g. se+u = say-a lying; rai+e = ray-e for wealth; go+e = gay-e for a cow; nau+i = nav-i in a boat; go+ya = gay-ya relating to cows.

Final Consonants.

- 60. The most notable divergence from external Sandhi is the unchangeableness of the final consonants (ep. 32) of roots and verbal or nominal stems before suffixes and terminations beginning with vowels, semivowels and usuals (while before other letters they usually follow the rules of external Sandhi); e.g. vac-ya to be spoken, duras-yu workhipping, yasas-vat glorious; vac-mi I speak (but vakti speaks); voc-am I will speak, pappe-yat would mix; praficah nom. pl. forward.
- a. Before the primary suffix na, d is assimilated; e.g. in-na n. feet (for ad-na), chin-na sut off (for chid-na); and before the secondary suffixes munt and maya, t and d; e.g. vidyûn-mant accompanied by highlating (vidyût) and mrn-maya consisting of day (mfd). In the nominal case-form man-nam (for sat-nam) of siz (sas) the final t is assimilated.
- 61. Nominal or verbal stems ending in consonants and followed by terminations consisting of a single consonant, drop the termination altogether, two consonants not being tolerated at the end of a word (28). The final consonant that remains is then treated according to the rules of external

Sandhi. Thus pranc+s nom. s. forward becomes prance (the s being first dropped, the palatals being changed to gutturals by 27, and the k being then dropped by 28); similarly a-doh+t = \hat{a} -dhok he milked (55).

62. Aspirates followed by any sounds except vowels, semivowels or nasals (60) lose their aspiration; e. g. randh+dhi = rand-dhi! 2. s. nor. impv. subject; labh+sya-te = lap-syate (B.) 3. s. fut. will take; but yudh-i in battle; a-rabh-ya scieng.

a. A lost soft aspirate is, if possible, thrown back before dhy, bh, s (55); e.g. ind-dhyam 2. pl. impv. of indh kindle; bhud-bhis inst. pl., bhut-sú loc. pl. But before s this rule applies only partially; thus from dabh harm: des. dip-sa-ti desires to injure, dip-sú intending to hurt; bhas chee: baps-a-ti cheus; guh hide: des. ju-guk-şa-tas beside aghukşat; dah burn: part. dakşat beside dhakşant; duh milk: nor, á-dukşat beside â-dhukşat.

b. But it is thrown forward on a following t and th,² which are softened; e.g. rabh+ta = rab-dhā seized; runādh+ti = runād-dhi; rundh+tām = rund-dhām 3 s. impv. let him obstruct.

63. Palatals. a. While c regularly becomes guttural before consonants (cf. 61; 27; 7b), j in some cases (the majority) becomes guttural (k, g), in others cerebral (t, d, s);

¹ For the Vedic language telerates two aspirates neither at the beginning and the end of the same syllable, nor at the end of one and the beginning of the next. On the other hand, there is no loss of aspiration in the root if an aspirate (after a yewel) which belongs to a suffix or a second number of a compound follows; e.g. vibhū-bhis with the Vihaus; garbha dhi m. transing-place. (The two imperatives bothli for pho-dhi, and ja-hi strike for jha-hi, follow the general rules)

² Except in the case of the read did place, the weak stem of which dadh (following the analogy of 62 a) becomes dhat before 1 and th (cf. 184 B b).

³ j always becomes k before a conjugational a (ep. 144, 4); e. g. mrk-sva 2, s. impv. of mrj seps.

e. g. uk-tá spoken (vac); yuk-tá joined (vyi); rug-ņā broken (vri); ep. 65); but rấţ nom, s. king (for rãj+s); mṛḍ-ḍhi 2, s. impv. wipe (for mṛj-dhi); rāṣ-ṭrā kingdom (for rāj-tra; ep. 64).

b. The palatal á before bh (73 a) normally becomes d;' k before a;' always a before t and th (cp. 64); e. g. padbhís with looks (pás), vid-bhís with tribes (viá); vek-ayási fut, of viá enter; vik-sú loc. pl. (viá); dik nom. a. of dís direction; nák nom. a. of nás night; vis-tá entered (viá).

c. c and j (not s) palatalize a following n; e.g. yaj + na = yaj-ñá sacrifice, but pras-ná question.

d. The ch of the root prach ask is treated like 6: á-prāk-şit 8, s. siş- aor., á-prāt 3, s. s- aor. (= á-prach-s-t); prs-tá asked, prás-tum inf. to ask.

64. Cerebrals change following dentals to cerebrals (39); e.g. iş + tā = iş-ṭā; av-iş + dhi = aviḍ-ḍhi 2, s. impv. işaer. of av; şan + nām (for ṣaṭ-nām) = ṣan-nām (cp. 53, 60a).

a. While the cerebral sibilant seems always to become a cerebral mute (t or d) in declension and becomes d in conjugation, it regularly becomes k before s in conjugation (cp. 63 b and 67); e. g. dvis+s = dvit nom. s. hating, vi-prus+s = vi-prut drop, vi-prud-bhis inst. pl.; av-is+dhi = avid-dhi 2. s. impv. is-aur. of av fuccur; dvis+sa-t = dvik-sat 3. s. inj. sa-aur. of dvis hate.

65. Change of dental n to cerebral n.

A preceding cerebral r, r, r, s (even though vowels, guttural or labial mutes or nasals, y, v, or h intervene) changes a dental n (followed by a vowel or n, m, y, v) to cerebral n; e.g. nr+nam = nrnam of men; pitr+nam = pitrnam of fathers; var + na = varna m. colour: us + na = usna hot;

g in cases of dis and drs: dig-bhyas, drg-bhia.

But in the nom. vi; (vii), vi-pit (vi-pii) and spit up (spii) the corebral has taken the place of the phonetic k owing to the inflaence of other forms in which the corebral is phonetic.

¹ No example occurs of this sound before the su of the loc. plur.

krāmaņa n. slep (vowels and labial nasal intervene), arkėņa (guttural and vowel); grbhņāti seizes (labial mute); brahmaņyā decotion (vowel, h. labial nasal, vowel; n followed by y).

This rule is followed throughout within a word even when a ş which it contains is produced by Sandhi; e.g. u şuvanah

(for u suvanáh).

is. The cerebralization of n takes place almost as regularly in verbs compounded with the prepositions pro econe, park news, part result, nir (for nis) set, as well as in nominal derivatives of these combinations; e.g. para-nade (nud thrust), pre-netf guide (ni lead); pari-hunts denial; prainiti brouthes (van); nir hanyat (han swite), but not in forms with gin (e.g. abhi-pra-ghuanti); pra hinomi, but pari-hinomi hi impel).

b. In nominal compounds n is usually corebralized when it is the initial of the excend number in the RV.; e.g. dur-náman is-named, prá-napát grout-grandson; but tri-náká n. third acrees. It is less frequent medially; e.g. půrváhná forenom, vřez-manas manly-spécifel, but fai-manas of for energy mind; up-pána gioing drink to men, but pari-pána n. drink (ep. 50 × 8).

c. Corobalization is even extended to external Sanchi in a closely connected following word, most often initially in the shellife has so, rarely in other monesyllables such as mi nec, nd like, occasionally in other words also; * e.g. saho su pah; part peta... visat. It sometimes occurs medially, oftenest in the shellife pronoun enactats; e.g. indra epam. It occasionally appears in accomind words also after final r; e.g. gór óhens.

Table showing when n changes to n.

in spite of intervening vowels, gutturals (including h), r labials (including v), and y	change n to n	if followed by vowels, n, m, y, v.
---	------------------------	--

I There are two exceptions to this rule in the RV., the gen. plur. ustranam ami rastranam.

^{*} After the final cerebral ; of sat (for sas sir), assimilated to the following n (33), initial dental n is cerebralized in san-navati sandy-sir (TS.) and in san piramimita (R.).

66 A. The dental n

I. remains unchanged before y and v; e.g. han-yate is slain; tan-v-ana stretching, indhan-van possessed of fuel (indhana), asan-vant having a mouth.

as final of a root becomes Anusvara before s; e.g. ji-ghāṃ-sa-ti wishes to kill (√han); also when it is inserted before final s or s in the neuter plural (71c; 83); e.g. ėnāṃs-i n. pl. of ėnas sin; haviṃs-i n. pl. of havis oblation (83).

B. The dental a

1. becomes dental t as the final of roots or nominal stems

a. before the s of verbal suffixes (future, norist, desiderative) in the three verbs vas dicell, vas shine, and ghas cut; thus a-văt-sis thou hast dicelt; vát-syati will shine; ji-ghat-sati wishes to cut (171, 5) and jighat-sū hungry.

b. before case-endings with initial bh in the reduplicated perf. participle and in four other words; thus jäggvád-bhís inst. pl. having awakened; uṣād-bhis from uṣās f. duen; mād-bhis, mād-bhyás from mās m.month; svátavad-bhyas from svá-tavas self-strong. This change was extended without phonetic justification; to the nom acc. s. n. in the RV., as tatan-vát extending fur.

2. disappears

a. between mutes; e.g. á-bhak-ta 3, s. s- aor., for á-bhak-s-ta beside á-bhak-s-i, of bhaj share; caṣ-te for cakṣ-te (= original caś-s-te) 3, s. pres. of cakṣ speak; a-gdha uncuten for a-ghs-ta from ghas cat.

A similar loss occurs in verbal compounds formed with

¹ The change of a to t before the t of the 3. a. of a past tense, as in vy-avat has show forth from vi-vas, is probably not a phonetic change, but is rather due to the influence of the 3. a. of other pretariles with t; "4-vas-t having thus become 4 vat instead of "4vas.

² There having been no case ending a here. No example occurs in the RV, and AV, of a loo, pl. in vatan.

the preposition and and the roots stha stand and stamble support; e.g. ut-thits and ut-tablits raised up.

b. before dh; e. g. śā-dhi for śās-dhi 2, s. impv. of śās order; ā-dhvam 2 pl. mid. impv. of ās sit; also after becoming s and cerebralizing the following dental; e. g. á-sto-dhvam (for á-sto-ş-dhvam) 2. pl. aor, of stu praise.

67. Change of dental s to cerebral s.

A preceding vowel except å (even though Anusvara' intervenes) as well as k, r, ş change dental s (followed by a vowel, s, t, th, n, m, y, v) to cerebral ş; e, g, from havis oblation: haviş-å inst. s., havims-î nom. pl.; câkşus n. eye: câkşus-å inst. s., câkşūmş-î nom. pl.; haviş-şu loc. pl.; sráj f. wereth: srak-şu loc. pl.; gir f. song: gir-şu loc. pl.; ti-şthati stands from sthå stand; câkşuş-mant possessing eyes; bhavi-şyáti will be from bhū be; su-şvåpa has slept from svap sleep. But sarpíh (final); mánas-å (a precedes); us-rå matutinal.

e. The cerebralization of a regularly takes place in the RV. initially in verbal compounds after prepositions ending in 1 and u, as well as in nominal derivatives from such compound verbs; also after the preposition nis out; e.g. ni sida sit does, and squyanti they proise; nih-sahamanah comparing.

b. In nominal compounds, a is more usually corebralized than not, when the initial z of the second member is preceded by vowels other than ā; e. g. su-some having abundant Sessa. But a is often reisined in the KV., not only when r or r follows, as in brdi-spfs muching the hours, rai-avará song by sers, but also when there is no such cause to prevent.

¹ The a, however, remains in forms of hims injure, nims kiss, and pums man, probably under the influence of the strong forms hindsti, pumansam, &c.

Words in which s otherwise follows r or any rowel but a must be of foreign origin, as brange a demon, bias n. red fibre, bush n. rapour,

² a remains when immediately followed by r or r, e.g. tiaras, tisfbhia, tisfnam f, of tri three; usras gen., uari and usram loc., beside uşar voc. daura.

^{*} The a remains unchanged when followed by r (even when t intervence) or r (even though a intervence, with additional m or v in amor removable and svar second)

the charge; e.g. go-nakhi bezide go-sakhi possessing cattle. After r the a becomes a in svar-sa light minning, avar-salt it obtainment of light.

c. Cerebralization is even extended to external Sandhi in initial a after a final i and u in the RV, when the two words are syntactically closely connected. This change chiaffy takes place in monesyllabia pronouns and particles, such as ad, syn, sin, sma, swid, and particularly sit; e.g. it sit. It also occurs in numerous verbal forms and participles; e.g. yuyam hi stha for prove, that san being in hermal. In other words the change is ram; e.g. tri sadhastha? In the later Sarphitas this form of external Sandhi is very rare except in the combination it sit.

Table showing when s changes to s.

Vowels except å	change	if followed
(in spite of inter-	s	by vowels,
voning Anusyara),	to	t, th, n,
k, r, s	s	m, y, v.

- 68. The labial m remains unchanged before y, r, 1 (cp. 60 and 42 B I); e. g. yam-yámāna being guided, vam-rá m. ant, ápa-mlukta concealed. But before suffixes beginning with v it becomes n; e.g. jagan-van having gone (from gam go).
- 69. a. The breathing h becomes k in all roots before s; o.g. dhák-si 2. s. pres. from dah burn; sak-si 2. s. pres. from sah prevail.
- b. In roots beginning with d it is treated like gh before t, th, dh; e.g. dah + tá = dag-dhá burnt (62b), duh + tám = dug-dhám 3. du. pres. Similarly treated is the oldest form of the perf. pass. participle of the root muh: mug-dhá bewildered.
- a h in all other roots is treated like an aspirate cerebral, which after changing a following t, th, dh to dh and

In the RV, secars the Sandhi yajuh akannam (for akannam) without corebralization of the on (ep. 65).

iengthening a preceding short vowel, is dropped; a g-sah + ta = sā-dhá; overcome; rih + ta = rī-dhá licked; muh + ta = mū-dhá (AV.) bewildered; vah + ta = ū-dhá; vah + dhvám = vo-dhvám (VS.).*

d. An exception to c is the root nah bind, in which h is treated as dh: nad-dhá bound. An exception to both b and c is the root drh: dr-dhá firm (begins with d and has a short vowel).*

CHAPTER III

DECLENSION

70. Declension, or the inflexion of nominal stems by means of endings that express the various syntactical relations represented by the cases, is most conveniently treated, owing to characteristic difference of form; meaning, and use, under (1) nouns (including adjectives); (2) numerals; (3) pronouns.

In Vedic there are

- s. three genders: masculine, feminine, and neuter;
- b, three numbers: singular, dual, and plural;
- c. eight cases: nominative, vocative, accusative, instrumental, dative, ablative, genitive, locative.³

In all these past participles the 4h is in the RV, written as lh.

With Samprasarana.

⁵ Through wash-dhyam: ash here becoming o just as original as (through as) becomes o (ep. 45 b).

^{*} Before this dh the vowel r never appears lengthened, but it is presedically long (ep. 8, note 2).

⁶ This is the order of the cases in the Hindu Sanskrit grammarians, excepting the vocative, which is not regarded by them as a case. It is convenient as the only arrangement by which such cases as are identical in form, either in the singular, the dual, or the plural, may be grouped together.

71. The normal case-endings added to the stem are the following:-

	SINGULAR.		DUAL.		PLURAL.	
N.	M. F.	8.	М. Р.	M,	M. F.	B.
V.	am		nu	ī	as	10
L. D. Ab.)	ī. 0	bhyām		bhis bhyas	
C.	1 6	i.	OS		ám su	

a. The vocative is the same (apart from the accent) as the nominative in all numbers except the mass. and femsing. of vowel stems generally and the mass. sing. of consonant stems in -an, -man, -van; -mant, -vant; -in; -as; -yams, -vams; -tar.

b. The nom. acc. sing. has the bare stem excepting the words in -a, which add m.

c. The nom. voc. acc, plur. neut. before the ending i insert n after a vowel stem and before a single final mute or sibilant of a consonant stem (modifying the n according to the character of the consonant; cp. 66 A 2).

72. An important distinction in declension is that between the strong and the weak stem. It is fully developed only in derivative consonant stems formed with the suffixes -añc, -an, -man, -van; -ant, -mant, -vant; -tar; -yāms, -vāms. In the first four and in the last the weak stem is further reduced before vowel endings. The stem here has three forms, which may be distinguished as strong, middle, and weakest.

a. Shift of accent was the cause of the distinction. The stem, having been accented in the strong cases, here naturally preserved its full form; but it was shortened in the weak cases by the accent falling on the endings. For a similar reason the last vowel of the strong stem, if long, is regularly shortened in the vocative, because the accent always shifts to the first syllable in that case.

73. The strong stem appears in the following cases:

Nom. voc. acc. dual Nom. voc. (not acc.) plur.

Nom voc. acc. plural only of neuters.

a. When the stem has three forms, the middle stem appears before terminations beginning with a consonant to (bhyām, bhis, bhyas, su); the weakest before terminations beginning with a vowel in the remaining weak cases; e.g. pratyáño-au nom. du.; pratyág-bhis inst. pl.; pratic-ós gen. du. (93).

b. In neuters with three stems, the nom. voc. acc. sing. are middle, the nom. voc. acc. du. weakest; e.g. pratyak sing.; pratic-i du.; pratyanc-i pl. (93). The other cases are as in the masc.

NOUNS.

- 74. Nominal stems are, owing to divergences of inflexion, best classified under the main divisions of consonant and vowel declension.
 - I. Stems ending in consonants may be subdivided into A. unchangeable; B. changeable.
 - II. Stems ending in vowels into those in A. a and ā; B. i and u; C. I and ū.

¹ Excepting names of relationship in -tar (101), nearly all nonna with changeable stems form their featurine with the suffix -i (100).

^{*} Changeable stems are named in this grammar in their strong and original form, though the middle form would be more practical, inasmuch as that is the form in which changeable stems appear as prior member in compounds.

³ Some Sanakrit grammers begin with the vowel declension in a (II. A) since this contains the majority of all the declined stome in the language. But it appears preferable to begin with the consenant declension which adds the normal endings (71) without medification.

I. A. Unchangeable Stems.

- 75. These stems are for the most part primary or radical, but also include some secondary or derivative words. They end in consonants of all classes except guiturals (these having always become palatals, which however revert to the original sound in certain cases). They are liable to such changes only as are required by the rules of Sandhi before the consonant terminations (cp. 16 a). Masculines and feminines ending in the same consonant are inflected exactly alike; and the neuters differ only in the acc. s. and nom. voc. acc. du. and pl.
- 76. The final consonants of the stem retain their original sound before vowel terminations (71); but when there is no ending (i.e. in the nom. sing., in which the s of the m. and f. is dropped), and before the ending su of the loc. pl., they must be reduced to one of the letters k, t, t, p or Visarjantya (27) which respectively become g, d, d, b or r before the terminations beginning with bh.
- a. The voc. sing. m. f. is the same as the nom. except in stems in (derivative) as (83).
- b. Forms of the nom. voc. acc, pl. n. seem not to occur in the Samhitas except in the derivative as, is, us stems, where they are common; e.g. apamsi, arcimsi, caksumsi.

Stems in Dentals.

77. Paradigm tri-vrt m. f. n. threefold.

	SING.		DUAL.		Plur.
N. m. f. tri	vřt n. trivi		A. trivft-a,	N. m. f.	trivrt-as
A. m. f. tri	vřt-am n. trivi	t ni	f. litrivet-au	A. m. f.	trivft-as
I.	trivft-å		[trivrd-bhyam		
	4190 de 2	D.	trivid-bhyam	DAKE	hkvael
D.	trivrt-o			The second is	antagi
Ab. G.	trivŕt-as	G.	trivet-os	G.	trivft-am
L	trivét-i	I.	trivet-os		trivřt-su
					trivrt-as.

¹ But in the Britimanus are found from -bhrt towing, -vrt berning, -hu-t searfding the N. pl. n. forms -bhruti, -vrnti, -hunti.

- 1. Of the stems in t most are radical, nearly thirty of them being formed with a determinative t added to roots ending in the short vowels i, u, p; e.g. ji-t conquering, fru-t hearing, kp-t making. Nearly all of them, however, appear as the last member of compounds, except cit f. thought; dyu-t f. brilliance; npt f. dancing; vp-t f. host. From sarvahu-t offering completely occurs in N. pl. n. the form sarvahunti in the AB. There are also a few derivative stems formed with the suffixes -vat, -tat, -it, -ut, and secondary -t; e.g. pra-vat f. height, devá-tat f. divine service; sar-it f. stream; mar-ut m. storm-god; yakp-t n. liver, fakp-t u. excrement.
- There are only three stems in th: kaprth, n. penis, path m. path, abhi-snath adj. piercing.
- 3. a. About 100 stems end in radical d, all but a few being roots used as the final member of compounds; e.g. nom. adri-bhid mountain-cleaving. Only eight occur as monosyllabic substantives: nid f. contempt, bhid f. destroyer, vid f. knowledge, ud f. wave, mud f. joy, mfd f. clay, hfd n. heart (used in weak cases only); and pad m. foot. The latter lengthens its vowel in the strong cases:

Sing. N. pát. A. půd-am. I. pad-å. D. pad-é. Ab.G. pad-ás. L. pad-i.

Du. N.A. påd-ä. I. Ab. pad-bhyåm. G.L. pad-ös. Pl. N. påd-as. A. pad-és, I. pad-bhis. D. pad-bhyås. G. pad-åm. L. pat-sú.

- b. There are also six stems formed with derivative d (suffixal-ad-ud), seemingly all feminine: drs-ad and dhrs-ad nether millstone, bhas-ad hind quarters, van-ad longing, sar-ad antumn, kak-ud summit, kak-ud palate.
- 4. There are about fifty radical stems in dh, simple or compound. They are almost restricted to m. and f., no distinctively n. forms (N. A. du. pl.) occurring and only four forms being used as n. in the G. L. s. Seven stems appear

as monosyllabic nouns: vfdh strengthening as a masc. adj., the rest as fem. substantives: nadh bond; sridh foe; kṣudh hunger; yūdh fight; mfdh conflict; vfdh prosperity; spfdh battle.

5. Radical stems in n are formed from half a dozen roots. Four of these are monosyllabic substantives: tán f. succession; rán m. joy; ván m. wood; sván adj. sounding.\(^1\) There are also the compound adjectives tuvi-sván roaring aloud and go-şán winning cows. Han slaying occurs as the final member of at least thirty-five compounds, but as it follows for the most part the analogy of the an stems, it will be treated under these (θ2).

Stems in Labials.

- 78. These stems, which end in p, bh, and m only, are not numerous. No neuters occur in the first two and only one or two in the last.
- I. All the monosyllabic stems in p are fem. substantives. They are: ap water, kfp beauty, kṣap night, kṣap finger, rip deceit, rap earth, vip rod. There are also about a dozen compounds, all adjectives except vi-ṣṭap f. summit. Three of the adjectives occur as f., the rest as m.; e, g. paśu-tṛp m. delighting in cattle.
- a, áp lengthens the stem in the N.V. pl. åp-as, a form sometimes used for the A. also. The forms occurring are: Sing. I. ap-å. Ab.G. ap-ås. Du.N. åp-a. Pl.N.V. åp-as. A. ap-ås. I. ad-bhis. D.Ab. ad-bhyås. G. ap-åm. L. ap-su.
- 2. The six uncompounded stems in bh are all f. substantives: ksubh push, gfbh scising, nabh destroyer, subh splendour, stubh praise (also adj. praising), and kakubh peak. There are also more than a dozen compounds: the substantives are all f., the rest being m. or f. adjectives; there are

The occount of these stems is irregular in remaining on the radical syllable (App. III. 11, 1), except tank (beside tank) and vandam.

no neuters. The cases of tri-stubh f. triple praise (a metro) are: Sing. N. tristup. A. tristubh-am. I. tristubh-a. D. tristubh-a. Ab. tristubh-as. L. tristubh-i; Pl. A. tristubh-as.

a, nábh lengthens its vowel in the N. pl. nábh-as.

A. nábh-as.

3. There are five or six monosyllabic stems in m, and one compound: śám n. happiness, dám n. (?) house, kṣám, gám, jám f. carth, him m. (?) cold; sam-nám f. favour.

a. Gám and jám syncopate in the s. I.Ab.G.: gm-å; jm-å; gm-ås, jm-ås; kṣām syncopates in the Ab.G. s. and lengthens its vowel in N.du. pl.: kṣm-ås; kṣām-ā; kṣām-as. Dām has the G. s. dan (for dám-s) in the expressions pátir dán and pátī dán = dám-patīs and dám-patī lord of the house and lord and lady of the house.

Stems in Palatals.

- 79. The palatals (c, j, é) undergo a change of organ when final and before consonant terminations (cp. 63). c always becomes guttural (k or g), j and ś nearly always become guttural, but sometimes cerebral (t or d).
- 1. The unchangeable stems in c when uncompounded are monosyllabic and almost exclusively f. substantives. Tvác skin, however, twice occurs as a m., and kruñc curiew is m. Compounds, as adjectives, are often m., but only one form occurs as a n., in the adv. ā-pŕk in a mixed manner. Vác speech would be declined as follows:

Sing. N.V. vak. A. vac-am (Lat. voc-em). I. vac-a.
D. vac-e. Ab.G. vac-as. L. vac-i.

Dual. N.A.V. vac-a, vac-au. I. vag-bhyam.

Plur. N.V. vac-as. A. vac-as (rarely vac-as). I. vag-bhis. D.Ab. vag-bhyas. G. vac-am.

¹ Stems in derivative and are changeable (93).

Similarly declined are:—tvác skin¹; sic hem; rúc lustre, šúc flame, srúc ladle; fo stanza, mfo injury; ni-mrúc sunset and other compounds. Krúñe forms its N. s. krúň, du krúňcau.

- 2. There is only one stem in ch, formed from the root preh ask: N. du. m. bandhu-pfeh-ä asking after kinsmen; also the D. and A. infinitive forms preh-é to ask, sam-pfeh-a to greet; vi-pfeh-am and sam-pfeh-am to ask.
- 3. a. Uncompounded radical stems in j are mostly f. substantives; but aj dricer, vij stake at play are m., and yūj, rāj, bhrāj are m. as well as f. Neut, forms occur in compound adjectives, but never the distinctively n. endings of the N.A.V. du. and pl.º

When the j is derived from a guttural, it becomes a guttural in the N. s. and before consonant endings; when derived from an old palatal, it becomes a cerebral in the N. s.' and before consonants, but k before the su of the L. pl.

Thus in the N. űrk (űrj) vigour; nir-nik (nir-nij) bright garment; but bhrāţ m. shining (bhrāj), rāţ m. king, f. mistress; L. pl. srak-nú garlands (sráj), pra-yák-nu offerings (pra-yáj).

- m. The N. of uva-yal f. shore of the secrificial election and of avayal m. print the effect the ablation is anomalous in dropping the j and adding the s of the nom.: ava-yas, avayas (ep. 28a).
- b. There are seven m. and f. adj. or subst. formed with the suffixes -aj and -ij: a-svapn-aj sleepless, tran-aj thirsty.

yaj merifica).

From vyac sztené occurs the strong form nru-vyádcam for crimines, and from sac accesspusy only the strong forms A. -sac-am, and N. pl. -sac-as.

^{*} This word meaning component also has a musalized form in N.A. a dm : yan (for yank), yanj-am, yanj-a.

But in a Brahmana -bhāj storong forms the N. pl. n. form -bhānji.

Except in rtv-ik from rtu-ij m. sacrifting in suc season, recoi (from

dhṛṣ-áj bold, san-áj old; uŝ-ij desiring, bhur-ij f. arm, vaṇ-ij m. truder. There is also the n. ásṛj blood.

usij m.f. would be declined as follows:

Sing. N. uśik. A. uśij-am. I. uśij-a. D. uśij-e. G. uśij-as.

Du.N. uśij-ā. G.L. uśij-os.

Pl.N. uśij-as. A. uśij-as. I. uśig-bhis. D. uśig-bhyas. G. uśij-ām.

4. There are about sixty monosyllabic and compound stems in á formed from about a dozen roots. Nine monosyllabic stems are f.: dáá worship, díá direction, dfá look, náá night, páá sight, píá ornament, práá dispute, víá settlement, vríá finger. Two are m.: iš lord and spáá spy. All the rest are compounds (about twenty of them formed from dfá). Some half-dozen cases of the latter are used as neuter, but no distinctively n. forms (N.A. du, pl.) occur.

The s, as it represents an old palatal, normally becomes cerebral d before bh, but in dis and drs a guttural. Before the su of the L pl. it phonetically and regularly becomes k. It usually also becomes k in the N. s. (which originally ended in s), as dik, nak; but cerebral t in spas and vi-spas spy, vis and vi-pas a river.

The normal forms, if made from vis settlement, would be:
N.V. vit. A. vis-am. I. vis-a. D. vis-a. Ab.G. vis-as.
L. vis-i.

Du. N.A. viá-a, viá-au.

Pl. N.A. viś-as. I. vid-bhis. D. vid-bhyas. G. viś-am. L. vik-sú.

a. The N of some compounds of dra is nusalized, as ki-dra (for ki-drak) of skal kind?, but th-drk such.

The N. s irregularly represents the final palatal (28 a) in puredist

[!] This word is of obscure origin, but the 1 probably represents a reduced suffix.

Stems in Cerebrals.

80. The only cerebral stems that occur end in d and s. Of the former there are only two; id I. praise (only found in s. I. id-å and id f. refreshment (only in s. I. id-å and G. id-ås).

There are a number of stems from about a dozen roots ending in a preceded by i, u, r, or k. Seven of these are uncompounded: is f. refreshment, tvia f. excitement, dvia f. hatred, ria f. injury; ua f. dawn; pfka f. satiation; dadhfa bold. The rest are compounds of the above or of mis wink, aris tean, uka sprinkle, mua steal, prua drip, dhra dare, vra ruin; aka eye. The a becomes t in the N., and d before bh, but is of course dropped when k precedes; e.g. N. dvit, vi-prut f. drop, an-ak eyeless, blind; L pl. vi-prud-bhis.

a. The final becomes k in the advertial neuter form dadhik boldly.

Stems in h.

81. There are some eighty steme formed from about a dozen roots. All three genders are found in their inflexion, but the neuter is rare, occurring in two stems only, and never in the plural. Of monosyllabic stems nih destroyer, mih mist, guh hiding-place, run sprout are f., druh fiend is m. or f., san conqueror is m., man great, m. and n. All the rest are compounds, more than fifty being formed from the three roots druh hale, van curry, san overcome; over thirty of them from the last. The two stems usnih f. a metre, and saráh bee are obscure in origin.

a. As h represents both the old guttural gh and the old palatal jh it should phonetically become g or d before bh, but the cerebral represents both in the only two forms that occur with a bh ending. In the only L, pl. that occurs,

¹ ups-nan f. she occurs only in the L s ups-nah-i. Judging by the inflexion of the word in classical Sanskrit the h would become a dental in the N. s. and before consonant endings.

anadut-su (from anad-vah), the h unphonetically became to which has been dissimilated to t. In the N. the phonetic k appears in the six forms -dhak, -dhuk, -dhruk, -ruk, -sprk, nank, and the unphonetic t in the three forms -vat, sat, sarat.

b. Stems formed from vah and sah lengthen the radical vowel in the strong cases, the former always, the latter generally.

The forms actually occurring if made from sah victorious would be:

Sing. N.V. m. f. sat. A. m. f. sah-am. I. sah-a. D. sah-é. Ab.G. sah-as. L. sah-i.

Du. N.A.V. m. f. sah-a and sah-au. N.A. n. sah-i.

Pl. N.A.V. m. f. såh-as. A. m. sáh-as and sah-ás; f. sáh-as. D. sad-bhyás. G. m. sah-ám. L. m. sat-sú.

Stems in r.

82. There are over fifty stems in radical r.' The preceding vowel is nearly always i or u, only two stems containing a and three a. Twelve stems are monosyllabic (seven f., three m., two n.), the rest being compounds. The r remains before the su of the L. pl., and the radical vowel

^{*} anad-van being a changeable stem with three forms is treated under the irregular changeable stems (96),

When h becomes t the initial a is cerebratized,

³ There are no stems in 1; while the five which may be regarded as ending in the semivowels y or v are treated below (102) as al, o, or au stems.

^{*} The stems in which the r is derivative (and preceded by a), in the suffixes ar and tar, are treated below (101) as r stems.

s gir praise, drar door, dhux burden, pur stronghold, tar star, paur victuals, star star.

^{*} gir praising, war projector, mair destroyer.

war muter, whe light.

is lengthened in the N. s. and before consonant endings. The forms occurring, if made from pur, would be:

Sing. N. pur. A. pur-am. D. pur-é. Ab.6. pur-as. L. pur-i.

Du. N.A. pur-a, pur-au.

Pl. N.V. púr-as. A. púr-as. I. púr-bhis. D. pūr-bhyás. G. pur-ám. I. pūr-ṣú.

s. dvar has the weakened A. pl. form duras take once duras and once dvaras), the only weak case countring.

h tár occurs in one (strong) form only, N. pl. tár-as, and stár in

one (weak) form only, L pl. atfbhis.1

c. svar n. light has the two contracted forms D. sur-é, G. sur-as.*
It drops the case-ending in the L. s.* susr.

Stems in a.

- 83. I. The radical s stems number about forty. A dozen are monosyllabic, five being m.; jñås relative, mås month, vås abode, pums male, sås ruler; two f.; kås cough, nås nose; five n.: ås face, bhås light, mås flesh, dös arm, yós welfare. The rest are compounds, e.g. su-dås giving well, liberal.
- s. Before bit the a becomes d in the two forms L mad-bhis and D. mad-bhysa, and r in the only other one that secure : dor-bhysan.
- The A; pl. los the accentuation of weak cases in mas-as and phas-as.
- 2. The derivative stems in s are formed with the suffixes -as, -is, -us, and are, with few exceptions, neuter substantives. All of them lengthen their final vowel in the N.V.A. pl. n., e.g. manamsi, jyótimsi, cáksûmsi. The m. and f. are mostly compounds with these stems as their final member.
 - a. The as stems consist almost entirely of neuters, which

abent.

With irregular accent. 3 1

With the accent of a disyllable.

Like the an stems (90, 2).
 This word might be a feminine.
 This word will be treated later (96, 2) as an irregular changeable.

are accented on the root, as man-as wind, but these as final members of adjective compounds may be inflected in all three genders. There are also a few primary musculines, which are accented on the suffix, being either substantives, as raks-as m. demon, or adjectives (some of which occur also in the f. as well as n.), as ap-as active; and one primary f., ns-as duwn.

The N. s. m. f. lengthens the vowel of the suffix: e.g. angiras m., usas f., su-manas m. f. In about a dozen compounds the long vowel appears (owing to the influence of the m.) in the n. also; e.g. urna-mradas soft as wood.

Before endings with initial bh the suffix as becomes o (45 b). The forms actually occurring, if made from ap-as, n. (Lat. opus) work and ap-as m. f. active would be as follows:

Sing. N. ápas; apás. A. ápas; apás-am. I. ápas-ā; apás-a. D. ápas-c; apás-e. Ab. ápas-as; apás-as. L. ápas-i; apás-i. V. ápas.

Du. N.A.V. ápas-ī; apás-ā, apás-au. D. apó-bhyām. G. ápas-os.

Pl. ápāms-i; apās-as. I. ápo-bhis; apō-bhis. D. ápobhyas; apō-bhyas. G. ápas-ām; apās-ām. L. ápas-su; apās-su.

Similarly N. n. yasas glory, m. f. yasas glorious; f. apsaras remeph.

a. A number of forms have the appearance of being contractions in the A. s. and N.A. pl. m. f.; àm = aeam and às = asas; thus mahâm great, vedhâm entoner, uşâm daum, jarâm eld age, medhâm matem, vayâm rigour, ân-âgâm moless, apsarâm. Pl. N. m. ângirās, ân-âgâs, nā-vedās cognismit, sa-jōṣās muitod; f. medhās, â-joṣās matialis, nā-vedās, au-rādhās topantifut. A. m. ân-âgâs, au-medhās (?) intelligent; f. uṣās.

^{*} The rowal of this word is optionally lengthened in the A. s., N. A. du., N. V. pl. : usas-am beside usas-am, &c.

⁵ The ending an is here very rare and occurs chiefly in the later Sambitia.

b. The is stems, numbering about a dozen, consist primarily of neuters only. When they form final members of compounds, they are secondarily inflected as m.; only one single such form, N. s. svá-socis self-radiant, occurs as a f.

The final s becomes a before vowel-endings and the L. pl. su, and r before bh. The inflexion of the n. differs from that of the m. in the A. s., N.A. du. and pl. The actual forms occurring, if made from socis glow in the n. and from -socis m. (when it differs from the n.), would be:

Sing. N. śocis; A. śocis; m. -śocis-am. I. śocis-a, D. śocis-e. Ab.G. śocis-as. L. śocis-i. V. śocis. Pl. N.A. śocims-i, m. -śocis-as. I. śocir-bhis. D. śocir-bhyas. G. śocis-am. L. śocis-su (67).

a āšis f. proper, which is not really an is stem, being derived from \$4+55s (the reduced form of the root śās), is inflected thus: N. āšis. A. āšis-am. I. čšis-a. Ph. N. A. āšis-as.

c. The us stems, numbering at least sixteen exclusive of compounds, comprise several primary masculines as well as neuters; three of the latter when compounded are also inflected as f. Eleven of the us stems are n. substantives, all but one (jamus birth) accented on the radical syllable; four of these (arus, caksus, tapus, vapus) are also used as m. adjectives. Three of the exclusively m. us stems are adjectives accented on the suffix, while two (nahus, manus) are substantives accented on the root.

The final s becomes s before vowel endings, and r before bh. The inflexion of the n. is the same as that of the m. except in the A. s. and N.A. du. pl. The only f. forms (about half a dozen) occur in the N. and A.; c.g. N. caksus seeing, A. du. tapus-a hot.

The actual forms occurring, if made from caksus eye as n. and seeing as m. would be:

Sing. N. oáksus. A. cáksus; m. cáksus-am. I. cáksus-ā. D. cáksus-e. Ab.G. cáksus-as. I. cáksus-i.

Du. N.A. cakşuş-i; m. cakşuş-a. D. cakşur-bhyam.

Pl. N.A. cáksums-i; m. cáksus-as. I. cáksur-bhis. D. cáksur-bhyas. G. cáksus-ām.

I. B. Changeable Stems.

84. Regular changeable stems are found only among derivative nouns formed with suffixes ending in the dentals t, n, s, or the palatal c. Those in t are formed with the suffixes -ant, -mant, -vant; those in n with -an, -man, -van, and -in, -min, -vin; those in s with -yāms and -vāms; those in c with -anc (properly a root meaning to bend). The stems in -ant (85-86), -in (87), -yāms (88) have two forms, strong and weak; those in -an (90-92), -vāms (89), and -año (93) have three, strong, middle, and weakest (73).

Nouns with Two Stems.

85. Stems in -ant comprise present, future, and acrist participles (156) active (m. and n.). The strong stem is in -ant, the weak in -at*; e.g. ad-ant and ad-at cating from ad cat. These participles are inflected in the m. and n. only, the f. having a special stem in ī. The n. inflexion differs from the m. in the N.V.A. s. du. pl. only. The accent, if resting on the suffix, shifts in weak cases to the endings that begin with vowels.

Excepting those of the reduplicating verbs and a few others that follow their analogy (85 b).

² On the fermation of the L stems see 95.

³ In Latin and Greek the distinction was lost by normalization: G. edentia, Theren.

N. A. adáz

adánt-i

MASCULINE.

SINGULAR.	DUAL	PLUMAL.

A. adánt-am (Lat. ode	entem) adánt-a -au	adat-ás
J. adat-å D. adat-å Ab.G. adat-ås L. adat-í	D, adád-bhyām G. adat-ós	I. adád-bhis D.Ab. adád-bhyas G. adat-ám L. adát-su
	NEUTER.	

Other examples are: arc-ant singing, sid-ant (sad sit), ghn-ant (han slay), y-ant (i go), s-ant (as be); pasy-ant seeing; ich-ant wishing; krnv-ant doing; sunv-ant pressing; bhanj-ant breaking; jan-ant knowing; janay-ant begetting; yuyuts-ant wishing to fight; fut, karisy-ant about to do; acr.

adat-i

a. The analogy of these participles is followed by a few adjectives that have lost their old participial meaning: rhant weak, preant spotted, brhant great, rusant brilliant; also the substantive dant tooth. The adj. mahant great, also originally a participle, deviates from the participial declension in lengthening the vowel of the suffix in the strong forms:

Sing. N. m., mahán; n. mahát. A. mahánt-am. I. mahat-á. Du. N.A. mahánt-a, -au. D. mahád-bhyām.

Pl. N. mahant-as. A. mahat-as. I. mahad-bhis.

For original adant-a, cp. Lat. ofma.

saks-ant (sah overcome).

From the root man (originally magh). Cp. Lat, mag-nu-z,

² Probably an old participle of ad sat with prehistoric less of the initial a like a and being from as to.

b. The participles of verbs with a reduplicating present base, i.e. those of the third class (127, 2) and intensives (172), do not distinguish a strong stem, in other words, have at throughout; e.g. bibhyat fearing, ghanighn-at repeatedly killing (/ han). The analogy of these participles is followed by a few others formed from unreduplicated bases; das-at worshipping, sas-at instructing; also daks-at and dhaks-at nor. part. of dah burn. A few others, again. originally participles, have come to be used as substantives with a shift of accent to the suffix. Three of these are f. and two m. : vahát, sravát f. stream ; vehát f. barren cow ; vaghat m. sacrificer; suscat m. pursuer. Besides the first three substantives just mentioned there are no feminines except the adjective a-sascat unequalled when used as a f. Hardly any n. forms occur except from the old redunlicated participle jág-at going, living (from ga go), used chiefly as a substantive meaning the animate world. The inflexion of these reduplicated stems in at is like that of the compounded radical t stems (77), the accent never shifting to the endings.

The forms occurring if made from dadat giving (da)

would be:

Sing, N. m. n. dádat. A. m. dádat-am. I. dádat-a. D. dádat-a. G. dádat-as. L. dádat-i.

Plur. N.A. dádat-as. I. dádad-bhis. G. dádat-am.

86. The adjective stems formed with the suffixes -mant and -vant, which both mean possessing, are inflected exactly alike and differ from the stems in -ant solely in lengthening the yowel of the suffix in the N. s. m. The V. of these stems

Which has been weakened because here the accent is regularly on the reduplicative syllable.

^{*} But wib ant corrying as a participle.

But srav-ant flowing. * The derivation of this word is uncertain.

But saso-at as a participle (from sac accompany).

[&]quot; Lit having no spend; but & sascant-i us the L of the participle sascat.

The f. is formed with I from the weak stem : mat-I, vat-I (95).

is regularly i formed with mas and vas i; e.g. havis-mas from havis-mant; bhaga-vas from bhaga-vant,

From go-mant possessed of cores would be formed :

Sing. N. m. góman; n. gómat. A. m. gómant-am. L. gómat-i. V. m. gómas,

Pl. N. m. gómant-as; n. gómant-i.º A. m. gómat-as. L. gómat-su.

87. Adjective stems are formed with the suffixes -in, -min, -vin, which mean possessing. Those in -in are very common, those in -vin number nearly twenty, but there is only one in -min: rg-min praising. They are declined in the m. and n. only; but the n. forms are very rare, occurring in the s. N. I. G. only. These stems sometimes come to be used as m. substantives; e.g. gath-in singer. As in all derivative stems ending in n, the vowel of the suffix is lengthened in the N. s. m., and the n disappears in that case (in the n. also) and before consonant endings.

The forms actually occurring, if made from hast-in having hands, would be as follows:

Sing. m. N. hasti. A. hastin-am. I. hastin-a. D. hastin-e. Ab.G. hastin-as. I. hastin-i. V. hastin.

Du. m. N.A. hastin-a, -su. I.D. hasti-bhyam. G.L. hastin-os.

Pl. m. N. hastin-as. I. hasti-bhis. D. hasti-bhyas, G. hastin-am. L. hasti-su.

Sing. n. N. hasti. I. hastin-a. G. hastin-as.

³ There are sixteen in the RV, in was and only three in the later van (of which there are eight more in the AV.). There are aix vocatives in mas in the BV, but no example of the form in man.

^{*} There are also vocatives in vas from stems in van and varus (ep. the V. in yas from stems in yaras).

The only two forms that occur are ghrtávanti and pasumanti. The Padaphiba reads vanti and manti in these forms, and the lengthening of the vowel seems metrical.

[&]quot; The f. stem is formed with 1: advin presenting horser; f. advin-1.

MS-80]

88. 3. Comparative stems are formed with the suffix yams, which is nearly always added with the connecting vowel I to the accented root. Only two stems are formed with yams exclusively: jya-yams greater and san-yams older; six others are formed with yams as well as i-yams; e.g. bhu-yams and bhav-iyama more. The strong stem is reduced in the weak cases, by dropping the nasal and shortening the vowel, to yas. These stems are declined in the m. and n. only.1 No forms of the du, occur, and in the pl. only the N. A. G. are found. The V. s. ends in yas. The forms actually occurring, if made from kaniyams younger, would be as follows:

MASCULINE.

	BINGULAR	PLURAL.
N. 1	kánīyān	kanīyamsas
Δ. 1	kánīyāms-am	kaniyas-as
Ab. G. L.	kánīyas-ā kánīyas-e kánīyas-as kánīyas-i kánīyas	G. káníyas-ám
	Neuri	en.

N.A. kaniyas

káníyams-i

The I.D.Ah.G. sing. n., identical with the m., also occur.

Nouns with Three Stems.

89. 1. The stem of the perf. part. active is formed with the suffix vams. This is reduced in the weak cases in two ways : before consonant terminations (by dropping the nasal

F

The f, is formed by adding I to the week stem, w.g. preyas-i

Op, the mant, vant (S6), and the vams (S9) stems

and shortening the vowel) to vas which becomes vat'; and before vowel terminations (by loss of the masal accompanied by Samprasāraṇa) to us which becomes us. There are thus three stems: vāṃs, vat, and us. The accent always rests on the suffix in uncompounded forms. The inflexion is restricted to the m. and u. The only specifically u. form occurring is the A. s. The V. s. is regularly formed with vas. The forms actually occurring, if made from cakyvāṃs having done, would be as follows:

MASCULINE

a. In about a dozen of these participles the suffix vams is preceded by i (either as a reduced form of final radical a or as a connecting vowel):

jajňi-ván (from jňá know), tasthi-ván (sthá stand), papiván (pá drink), yayi-ván (yā go), rari-ván (rā give); īy-i-ván (i go), jagm-i-ván (beside jagan-ván : gam go), papt-i-ván (pat f/g), proș-i-ván (pra + vas dwell), viviś-i-ván (viś enter);

^{&#}x27; On the change of a to x ep. 66 B 1 b.

I The f. is formed with I from the weakest stem : e. g. cakrus-i.

Op. the mant, vant (86), and the yams sleme (88).
On the change of m to n see 68.

ok-i-van (ue be wont). This i is dropped before us; e.g. tasth-us-a, ly-us-as, jagm-us-c.

90. 2. Nouns in an, man, van include a large number of words, those in van being by far the commonest, those in an the least frequent. These stems are almost restricted to m. and n.; but some forms of adjective stems serve as f., and there is one specifically f. stem yos-an roman.

In the strong cases the a of the suffix is usually lengthened, a.g. adhvan-am; but in half a dozen an and man stems it remains unchanged, e.g. arya-man-am. In the weak cases the a is often syncopated before vowel endings, though never when man and van are preceded by a consonant, e.g. I. s. gravna from gravan pressing stone (but as-man-a stone), while before consonant endings the final n disappears, e.g. raja-bhis. In the RV, syncopation never takes place in the N.A. du. n., nor with one exception (sata-davni) in the L. s.

As in all other n stems, the nasal is dropped in the N. s., e. g. m. adhva, n. karma. But there are two poculiarities of inflexion which, being common to these three groups, do not appear elsewhere in the consonant declension. The ending of the L. s. is in the RV. dropped more often than not; e. g. murdhan beside murdhan-i on the head. In the N. A. pl. n. both the final n of the stem and the termination i are, in the RV., dropped in nineteen stems, e.g. karma; while they are retained in eighteen, e.g. karmani.

I. The an stems, which are both m. and n., besides the

With reversion to guttural, lack of reduplication, and strengthened radical vowel.

The stems in an and man form their f, with I added to their workest form; those in van substitute vari.

^{*} That is, the a represents an original sonant nasal.

^{*} Seven of these appear with a in the Samhita text, but with a like the rest, in the Pada text. The evidence of the Avesta indicates that the a form of the Samhita is the older.

I Six or seven adjectival forms are used as f.

one f. yósan, are not numerous. In the strong forms rbhu-kṣán chiaf of the Rbhus, púṣ-án, a god, and yóṣ-an woman retain short a; ukṣ-án ac and vṛṣ-an bull fluctuate between a and ā. In the inflexion of these stems (unlike those in man and van) the concurrence of three consonants is not avoided; c.g. śirsn-å, I. of śirs-án.

a. Six stems belong etymologically to this group though seeming to belong to one of the other two. They are: yū-v-an i m. youth, šv-ān i m. sop, rji-švan i m. a man, mātari-švan i m. a demi-god, vi-bhv-an i formating, pāri-jm-an i young round. Sire-ān n. is an extended form of Siras Acad = sir(a)=ān.

The normal forms, if made from rajan king, would be:

SINGULAR	. DUAI.	PEUBAE:
N. rājā	N.A. rājān-ā, -au	N. rūjān-as
A. rājān-ai V. rājan "	m	А. тајп-аз
l. rájň-a D. rájň-e	I.D. raja-bhyam	I. rāja-bhis D. rāja-bhyas
Ab.G. rajū-as	G. rājā-os	G. rājā-ām
L. rājan-i rājan		L. rāja-su

The n. differs in the N.A. only. No example of the s. N.A. occurs (p. 70, n. 1). But the du. of ahan day is ahan-i, pl. ahan-i.

2. The stems in man are about equally divided between in, and n., the former being mostly agent nouns, the latter verbal abstracts. About a dozen forms from these stems as final members of compounds are used as feminines.\(^{1}\) In

[|] See balow, 91. 3, 4,

¹ Probably from sh grove.

From bhū be.

From gam go,

The V. of materi-évan is materi-évas as if from a stem in van.

[&]quot;No certain examples of f. formed with I from man stems are found in the RV., though the AV. has five such at the end of compounds.

the strong forms arya-mán m. a god, t-mán m. self, jé-man victorious retain the short vowel in the suffix. In the weak forms, even when the suffix is preceded by a vowel, about a dezen forms do not syncopate the a, e.g. bhú-man-a, dâ-man-e. In the I. s. seven stems not only syncopate, but drop either the m or the n as well: prathi-n-a, pre-n-a, bhū-n-a, mahi-n-a, vari-n-a; draghm-a, raśm-a.

The normal forms, if made from as-man (Gk. anper)

m. stone, would be :-

Sing, N. áśmā, A. áśmān-am, I. áśman-â. D. áśman-e. Ab.G. áśman-as, I., áśman-i and áśman. V. áśman. Du. N.A.V. áśmān-ā. L. áśman-os.

Phir. N.V. ásman-as. A. ásman-as. I. ásma-bhis. D. ásma-bhyas. G. ásman-am. L. ásma-su.

The n. differs in the N.A. only. These cases from kárman act are:

Sing, kárma. Du. kármaņ-ī. Pl. kármāņ-i, kármā,

3. The stems in van are chiefly verbal adjectives and are almost exclusively declined in the m. Hardly a dozen of them make n. forms, and only five or six forms are used as f.² In the strong cases there is only one example of the a remaining short; anarván-am. In the weak cases, when the suffix is preceded by a vowel, the a is always syncopated in the Samhita text except in the forms da-ván-e, vasu-ván-e, and rti-van-i. The V. is usually formed in van, but there are four in vas: rtā-vas, eva-yā-vas, prātar-it-vas, vi-bhā-vas.³

When the suffix is preceded by a vowel, the a is generally syncoputed, as mahi-mn-å, also mahi-n-å, åc.

^{*} The f. of these stame is otherwise formed with i, which is, however, never added to van, but regularly to a collateral suffix vara.

Twenty-five such stems in vari are found in the RV.

Cp, the mant, vant, yams, vams stems.

The normal forms occurring, if made from gra-van m. pressing-stone, would be:

Sing. N. grāvā. A. grāvān-am, I. grāvņ-a. D. grāvņ-a. Ab.G. grāvņ-as. L. grāvan-i and grāvan. V. grāvan. Du. N.A.V. grāvān-ā, -au. I. grāva-bhyām. G. grāvn-os. Pl. N.V. grāvān-as. A. grāvn-as. I. grāva-bhis. D. grāva-bhyas. G. grāvn-ām. L. grāva-su.

The n. differs in the N.A. only. These cases (the du. does not occur) formed from dhánvan bow are: Sing-dhánva. Pl. dhánvani, dhánva, dhánva.

Irregular Stems in an.

- Pánth-an m. path, forming the strong stem pánthān, is best treated under the irregular stems in radical ă (97 A. 2 a).
- 2. áh-an n. day, otherwise regular, supplements the N. s. with áh-ar.
- 3. śv-án m. dog, otherwise inflected like rájan, takes Samprasāraņa in its weakest stem śún,* which, as representing an originally disyllabic stem,* retains the accent:

SINGULAR.	DUAL.	PLURAL
Ν. ένὰ (κύων)	éván-a, -au	śvan-as
A. éván-am	śván-ã, -au	śun-as
I. śún-a G. śún-as (κυρός)		I. śvá-bhis D. śvá-bhyas
		G. áún-ām

The normal N. in a appears to have been avoided in an stems, collateral stems always being substituted in this case, as also for alcain eye, &c.

² So also in Greek : meris - San-as,

² Op. Greek ever.

 yū-v-an, m. youth, otherwise regular, forms its weakest stem, yūn, by Samprasārana and contraction ' (yū-un):

	SINGULAR.	DUAL	PLURAL
N	, yūvā	N.A. yúván-á	N.V. yūvān-as
	yuvan yuvan-am		A. yūn-as
). yūn-e ² }. yūn-as		I. yúva-bhis D. yúva-bhyas

5. maghá-van bountiful, an epithet of Indra, also forms its weakest stem, maghón, by Samprasaraņa and contraction (maghá-un):

		SINGULAR.	DUAL	PLURAL.
- 11		maghá-vã	maghá-văn-ā	maghá-ván-ao
		mágha-van maghá-văn-am		maghón-as
	G.	maghón-as	maghón-os	maghón-ám

 ûdhan n. udder supplements the N. s. with ûdhar and ûdhas; before consonant endings, the latter stem also occurs: pl. L. ûdhas-su.

92. The root han, which forms the final member of thirty-five compounds in the RV., follows, for the most part, the analogy of derivative stems in an. The strong stem is

I The stem retains the account because it represents a disyllable;

cp, šván.

3 The supplementary stem maghá-vant is also used in the fellowing cases: N. maghávan. Pl. I. maghávad-bhis. D. maghávad-bhyss. L. maghávat-su.

Cp. Lat. javen-is and pin-for.

-han (with a long vowel in the N. s. only), the middle is -ha, and the weakest -ghn. The cases that occur would in the compound vrtra-han Vrtra-slaying be:

	BINGULAL	DUAL.	PLUBAL
N.		N.A. vrtra-hán-ā, -au	N. vṛtra-háṇ-as
	vřtra-hánam vřtra-hánam		A. vṛtra-ghn-às
	vrtra-gim-å vrtra-ghn-ë		L vrtra-há-bhis
G.	vrtra-ghn-ás vrtra-ghn-í		

3. Adjectives in anc.

93. These words, the suffix of which generally expresses the meaning of -ward, form the strong stem in and, the middle in ic or uc (according as uc is preceded by y or v). About fourteen stems have a weakest form in ic, and about six in uc, which, if they are the contractions of accented syllables, shift the accent to the endings. They are inflected in the m. and n. only, the f. being formed with i from the weakest stem. The only cases occurring in the pl. are the N.A. and in the du. N.A.I..

The forms actually found, if made from praty-and towards, would be:

Here the h reverts to the original guttural aspirate; the n in this combination is never corebralized.

³ Properly the root and head, which has, however, practically acquired the character of a suffix.

Here ye and ve irregularly contract to I and u, instead of i and u.

^{&#}x27;This is the general rule of the RV., but not of the AV. Thus A. pl. pratic-as RV., pratic-as AV.

TIT TITLE & T.

MASCULINE.

	BINDULAEL	DUAL	4.000000
N.	pratyáň (61)	N.A. pratyáňe-á, -au	N. pratyáňc-as
A	pratyáňo-am		A. pratic-ás
	pratic-à		

NEUTER.

L. pratic-ós

N.A. pratyák

Ab.G. pratic-as

L pratic-i

pratic-i

a. Other words similarly declined are:

STRONG STEM.	MIDDLE STEM-	Weakest Stem.
ny-ane downward	ny-ák sam-y-ák	nie sam-ie
sam-y-año united tir-y-año transverse	tir-y-ûk	tirás-c
úd-año upward anv-áño following	úd-ak any-ák	ud-ic t
visy-and all-percading	vişv-ak	vişüc

b. About a dozen stems, in which the año is preceded by a word ending in a, have no weakest form. Such are apaño backward, arvaño hitherward, ávaño downward, devaño godward, páraño turned away, praño forward. The only

¹ The stem nic seems to have retained the accent; for the f. is nic i (not nic-f), and the L. nick being used adverbially probably has an adverbial shift of accent, devadryanc concern also retains the accent on the suffix: L. devadrica.

The y is here inserted by analogy.

Here tiri takes the place of tiris across, from which the weakest stem tirase (tiris + no) is formed.

[&]quot; i, though no y precedes the a of the suffix, by analogy.

cases occurring in the du. and pt. are the N.A. m. The inflexion of these words may be illustrated by apane:

Sing. m. N. ápān (61). A. ápāne-am. I. ápāe-ā. L. ápāe-i.

Du. N.A. ápāňe-ā, ápāňe-au.

Pl. N. ápāno-as. A. ápāc-as.

The only distinctively n. form is N.A. s. prak. The f. is formed from the weak stem with I: prac-L

94. The points to be noted about changeable stems are:

- L The vowel of the suffix is lengthened in the N. s. m. except in ant and ane stems: go-man, agni-van; kanīyan; cakṛ-van; rajā; asmā, gravā, yuv-ā; hasti, rg-mi, taras-vi; but ad-an, pratyan.
- 2. The N. sing, ends in a nasal in all changeable stems except those in n, which drop it.
- 3. All changeable stems that lengthen the vowel in the N. s. m. shorten it in the V. Those that drop the n in the N., retain it in the V., while those that have n (after ā) in the N. drop it in the V., and add s:

thus rājan (N. rājā). ' ášman (N. ášmā), grāvan (N. grāvā). yūvan (N. yūvā); ' hāstin (N. hasti); hāvişmas (N. havişmān), mārutvas ' (N. marūtvān); kānīyas (N. kānīyān); cākṛvas (N. cākṛvān).

z. The only changeable stems in which the V. does not differ in form (though it does in ascent) from the N. are the ant and ane stems; sdan (N. adán); prátyań (N. pratyáń).

95. The feminines of nouns with changeable stems are

In B. some half-dezen N.A. plur. n. forms occur: práňol, pratyáňol, srváňol, samyáňol, sadhryaňol, anvaňol.

² One an stem has a V. in as ; mātari-šv-as (p. 68, n. 5).

^{*} Four van stems form their V. in was : ṛtā-vas, eva-yā-vas, prātarit-vas, vi-bhā-vas.

^{*} The EV, has three vocatives in van; arvan, šatāvan, šavasāvan.
The AV. has five others, but none in vas

formed by adding i to the weak stem (when there are two stems) or the weakest (when there are three); e.g. adat-i (m. adánt); dhenumát-i (m. dhenumánt), ámavat-i (m. ámavant); arkin-i (m. arkin); návyas-i (m. náviyāṃs); jagmúṣ-i (m. jagm-i-váṃs); sam-rájñ-i (m. rājan), maghón-i (m. maghávan), -ghn-i (m. -hán); pratic-i (m. pratyáñe); avitr-i (m. avitár).

a. The f. of the present participle active of the first conjugation (125) is made from the strong m. stem in ant (op. 150); that of the accord conjugation from the weak stem in at; o.g. bharantiteing, uchant-i strong, prisyant-i obtaining abundantly, codayant-i erging; but ghnat-f (m. ghnant) slaying, piprat-i furthering (m. piprat), kravat-f (m. kravani), yunjat-f (m. yunjant) poling, punat-f (m. punant) perfying.

b. The f. of the simple future participle is formed like the present participle of the first conjugation: su-syant-I about to bring forth, san-

inyant-I going to obtain.

Adjectives in van form their f. in var-1; σ.g. pf-van (siar) fut,
 f. pf-var-1 (siapa = πίfερα). The f. of the irregular yū-v-an young
 (91, 4) is yuva-ti.

Irregular Nouns with Changeable Stems.

96. 1. ap f. water lengthens its vowel in the strong cases du. and pl. and substitutes t for p before bh. The forms occurring are:

Sing, I. ap-å. Ab.G. ap-ås. Du. N. apa. Pl. N.V. ap-as. A. ap-ås. I. ad-bhis. D. ad-bhyas. G. ap-åm.

L. ap-sú.

2. anad-váh m. oz (lit. cart-drawer, from ánas + vah) has three stems; the last syllable is lengthened in the strong stem anad-váh; and shortened by Samprasarana in the weakest anad-uh and in the middle anad-ud (dissimilated

The weak stem appears once in sinc-at-1 sprinting beside the regular sinc-ant-1.

* In a compound.

for anad-ud). The N. is irregularly formed as if from a stem in vant. The forms occurring are:

	BINGULAR.	DUAL.	PLURAL.
N.		N. anad-vah-au	N. anad-vāh-as
G.	anad-vāh-am anad-uh-as anad-uh-i	A. anad-váh-au	A. anad-úh-as D. anad-úd-bhis L. anad-út-su

3. pu-mams m. man has three forms; its a is lengthened in the strong stem, and syncopated in the weakest to pums, in the middle to pum.* The forms occurring are:

SINGULAR.	PEURAL
N. půmän (89, 1)	půmäms-as
V. púmas A. púmāṃs-am	puṃs-ás
Ab.G. pums-ás	G. pums-am
L pums-i	L pum-sú

II. Stems ending in Vowels.

97. A. 1. The stems in derivative a (m. n.) and a (f.) constitute the most important declensions because the former embraces more than one half of all nominal stems, and the latter includes more feminines than any other declension.

I Probably an old compound, with the second part of which the Lat. note 'male' may be allied.

² With nonessary less of the a between consonants : ep. 28 and 16 a.

[&]quot; N. -as, -am = 6k. -or, -or ; Lat. -us, -um.

^{4 - 6 =} Gk. -a. -9: Lat. -a.

PERRAL.

Sycamore & B

These two declensions are also the most irregular since the endings diverge from the normal ones here more than elsewhere. The a declension is the only one in which the N.A. a. has an ending in the singular, and in which the Ab. s. is distinguished from the G. The inflexion of the addiffers from that of the m. in the N.A.V.s. du., and pl. only. The forms actually occurring, if made from priyá dear, would be:

Granonan			A District			
	MASC.	FEM.	MASC	PEM.		
N.	priyá-s	priya	N. priyas priyasas	priyās priyāsas ¹²		
Α.	priyá-m	priya-m	A. priyan'	priyas		
		priyáyā*	L (priyáis*	priyabhis		
		priyā	priyébhis	- 4		
	priyaya	priya-yai	D.Ab. priyébhyas	priyabhyas		
G.	priyát † priyásya ²} priyé priya	priyā-yās * priyā-yām * priye *	G. priyā-ņ-ām 10 L. priyésu 11 V. priyās priyāsas	priyā-ņ-ām priyāsu" priyās		

Dual. N.A. m. priyā, 13 priyáu; f. priyé. I.D.Ab. m. f. n. priyábhyám. G.L. m.f.n. priyá-y-os.

¹ Cortain adjectives in -as -a -am follow the pronominal declension (110).

These terminations originally came from the pronominal declaration (110). The final of ena is often lengthened (ena).

³ This form, made with the normal I, ending & is rare.

^{*} This ending is preserved in the Lat, o for oil (a.g. Ganicol in inscriptions) and in the Greek (Crotic) adverb vo-5s asset.

⁵ The terminations yat (=yā-o), yās (=yā-as), yām are due to the influence of the feminines in 1 (originally yā), e.g. davyāt, davyās, davyām (cp. 100).

⁽For notes ** it see next page.)

- a. The N.A. neuter forms are: Sing. priyá-m. Du. priyé. Pl. priyá¹⁴ and priyá-n-i.¹⁶
- a. In the Brahmanas and Sütras the D. s. f. ending at is used instead of the Ab.G. ending as both in this declension and elsewhere (28, \$a);
 e. g. Jirnāyai tvacah of dead ship.
- 2. Radical à stems, m. and f., are common in the RV., being formed from about thirty roots. Most of them appear only as the final member of compounds, but four are used as monosyllables in the m.: jå child, trå protector, då gieer, sthå standing; and seven in the f.: kṣå abode, khå well, gnå dieine woman, jå child, jyå bowstring, må measure, vrå troop. The forms occurring in the oblique cases are so

The form amba, occurring thrice in the RV., may have a V. meaning, O mother? The VS. and TS. have the V. amba as from a stem amba matter.

[†] This form seems to consist of a double ending: as-as. The form in as is about twice in the RV, and twenty-four times in the AV, as frequent as that in asas.

That the uniting was originally one is shown by the Sandhi (40.2); op. Gothic one, 6k, inser, orr.

^{*} This ending is preserved in such Greek datives as lawer. It is slightly commence in the RV, than priyabhis, but in the AV, it is five times as common. It is almost always used in the Brahmana.

If The n seems to have been due to the influence of the n stems.

¹¹ The u of su is almost invariably to be read with hiatus, even before u.

¹¹ This form is rare in the RV., being probably due to the influence of the many masculines.

¹⁷ The du, in a is more than seven times as common as that in au in the RV.

¹⁸ The form in a is commoner in the RV, than that in ani in the proportion of three to two. In the AV, the proportion is reversed.

¹³ This form is due to the influence of the an atoms, which form their n.pl. in both a and ant, e.g. nama and namani.

¹⁶ There are no distinctively n. forms, as the radical vowel in that gender is always shortened to a, and the stem is then inflected according to the derivative a declenaion.

¹² These stams become less common in the later Samhilas, where they often aborton the final vowel to a, and are then indected like derivative a stame.

rare that some endings, such as those of the L. s., the G.L. du., and the G. pl. are not represented at all. The m. always takes s in the N. s., but the f. often drops it, doubtless owing to the influence of the derivative a stems. The radical vowel is dropped before the endings et and as of the D. and G. v. The forms actually occurring, if made from ja child m. f., would be:

Sing. N. já-s; f. also já. A. jám. I. já. D. j-6. G. j-ás. V. ia-s.

Dual N.A.V. ja and jau. I. ja-bhyam.

Plur. N. Jas. A. jas. I. ja-bhis. D. ja-bhyas. Ab, ja-bhyas. I. ja-su.

u. Five anomalously formed in derivative stems in a follow the

analogy of the radical a stoma,

The strong stem of pathi m. path is in the RV. pantha only : Sing N. pantha-s. A. pantha-m. Pl. N. panthas. The AV, has besides the stem pánthan : Sing N. pántha. A. pánthanam. Pl. N. pánthan-as.

From the adverb tatha thus is formed the sing, N. a-tatha-a not say-

ing "yes".

usana m., a seer, bas a N. like a f. : usana. A. usana-m. D. usan-s. mantha cheming effect and maha great form the A. mantha-m and maha ni.

3. Radical a stems, m. n., numbering about twenty, consist almost entirely of stems in radical a that has been shortened to a. Excepting kha n. aperture they appear as final members of compounds only; e.g. prathama-já firstborn. -ha slaying is a reduced form of han; e.g. satru-ha slaving enemics.

98. B. Stems in i and u (m.f.n.),

Both declensions embrace a large number of nouns of all genders. But the i declension contains comparatively few n. stems, and, excepting the N.A. s. and pl., n. forms are

¹ Not, however, in most of the dative infinitives; a.g. para-dat to gier up, pra-khyńi to see, prati-mái śmitab (ep. 167).

Contrary to the rule generally applicable to menosyllable stems, the account remains on the radical syllable throughout,

rare in it, not occurring at all in several cases. In the u declension the masculines greatly prependerate, being about four times as numerous as the f. and n. stems taken together, while the neuters here greatly outnumber the feminines. The inflexion, which is closely parallel in both groups, is practically the same in all gonders except that the N.A. s. and pl. n. differ from the m. and f., and the A. pl. m. and f. differ from each other. The final vowel of the stem shows Guna in three of the weak cases of the a. (D.Ab,G.), as well as in the V. s. and the N. pl. m. f., while it is abnormally strengthened in the L s. The normal ending as of the Ab.G. s. is reduced to s, while that of the L. s. is always dropped in the i declension and usually in the u declension. The inflexion of the n stems has influenced the i declepsion in the L s. only, but the n declension in the G.Ab. and L. also, Oxytone stems, when i and u are changed to y and v, throw the accent on a following vowel, not as Svarita, but as Udatta, and even on the nam of the G. pl., though the stem vowel in that case does not lose its avllabic value.

The adjectives suc-1 bright and madh-u sweet may be used to illustrate the forms actually occurring:

SINGULAR

				CANADA CONTRACTOR		
	III.	Ť.	n	m.	f.	m.
	śuci-s śuci-m	áuci-s áúci-m	ádal ádal	máďhu-s mádhu-m	mådhu-s mådhu-m	mádhu mádhu
L	śdoy-a ' śdoi-n-a	šúci šúci	śúci-n-a	mádhy-a i mádhu-n-a	mádhv-á	mádhu-n-ā

^{&#}x27; Five stems in the RV. form their I, like sucya, but twenty-five (under the influence of the n decleration) like sucha.

D1931-2

¹ This is the regular formation, but the contracted form in I is more than twice as common in the RV. The latter is in the RV, further shortened to I in about a dozen work.

³ The normally formed I in a is made in the m, by only four stems, but that with na by thirty in the EV.; in the n, the na form is used almost exclusively.

ari m.f. decour and avi m. steep have ary-is and avy-as.

The derivative i, n and I stems are the only enes that do not take a or an in the dual.

" and solth sed is often used as a D. The RV, has seven datives in al, e.g. bhrty-ai for auxonance, following the analogy of the I declension.

The RV, has six forms according to the i declension, e.g. ynvaty-as. The form vedi on the alter, occurring twice, is the only L from an i stem with the normal ending i (= vedi-i).

This type occurs from over sixty stems, the normal formation (madhy-e) from only three stems in the RV.

* The normally formed type madhy-as is followed by six stems, the prevailing type midho-s by over seventy in the RV.

Seven stems follow this type, while nineteen follow madhau in the RV.

to From one slom also madhy-o.

11 Once also madhy-as.

II Also madhy-us, vary-as.

śuci-bhyam

éúcy-os

12 Only in the form sanav-i,

" The only example in RV, is urv-I the occ sorths. The VS, has idnn-n-i hee knees.

18 The only example is janu-n-cs (AV.).

IRLO

The form in au is more than twice as common as that in & in m, and f.

m. Twenty-seven i stems in the RV, show forms according to the derivative i declenation in the D.Ab.G.L. s.f.: e.g. bhrit f. sustances: D. bhrty-ši; bhůmi f. sark: Ab.G. bhůmy-ša, L. bhůmy-šm. Such forms in at, ša, šm are much commenor in the AV. In B. at is regularly used instead of \$\$ (cp. 97 s. a). Besides the numerous I. s. forms in nå the RV: has half a dozen i stems showing the influence of the n declenation in the instpicant use of the endings of in the N.A.V. du, n, and ni in the N.A. pl. n.

In the u decleusion the RV, has only three forms following the analogy of the derivative i deciension: iau £ error: D. iav-at, G. iav-as, su-visiv-as of the (river) Succide (all in late passages).* There are

³ The only stem not taking Guna is art decont which has the N. pl. ary as in. t.

The original ending us is in both sucin and madhan preserved in the Sandhi forms of me or mr (39, 49).

^{*} About ten atems in i in the RV, have N. pl. forms according to the derivative I decleration; e.g. avants stresse beside avanayas.

^{*} The normal type suci (- suci i) is of about the same frequency as its shortened form suci, both together occurring about fifty times in the HV. The secondary type sucini occurs about fourteen times.

^{*} There is only one example of the N. pl. m. without Guns ; midhv-as itself occurring four times.

There are two examples of the N. pl. f. without Guna: madhy as and sata-kraty-as having a hundred powers.

¹ The type without ending is made from twelve stems, the form with shortened rowel being nearly twice as common as that with u.

The secondary type madhuni is more frequent than madhu.

^{*} In B. the D. s. f. ending at is here regularly used instead of the Ab G. in.

also some forms following the analogy of the 4 declaraton : A. 4-bhirvam from 6-bhird forless and N. du. and pl. in yuv-2 and yuv-as from several stems derived with the suffix yu. Besides the numerous I. singulars m. and n., there are many alternative n. forms, in the remaining cases of the s. and N. A. pl., following the n declension: D. mádhu-ne, kašípu-ne; Ab. mádhu-nas, sánu-nas; G. cáru-nas, dáru-nas, drú-nas, mádhu-nas, vásu-nas; L. šyu-ni, sánu-ni; dáruni; N.A. pl. dira-ni, &c.

b. There is no example of a V. a n. from an i stem, and the only one from an u stem is gaggulu (AV.). This seems to indicate that the

V. s. in these stems was identical with the N.

c. Adjectives in a often use this stem for the f. also; c.g. cara dear; otherwise they form the f. in ū, as tanú m., tanú f. thia (Lat. tom-is); or in I, as urd may urv-f f. wide.

d. There are about a dozen stems in which final I seems to be radical in a secondary sense as representing a reduced form of roots ending in a. They are mostly in compounds formed with dhi; e.g. ni-dhi occasory. There are also about eight stems formed from roots in u, all of which except dyn day are final members of compounds; e. g. raghudru ruszing rossily; besides some twelve stems in which n is rullest in a secondary sense, as representing the shortened form of the vowel of three roots in û ; e.g. su-pû shrijjing sed! (from pû perijy), pari-bhû surrauniting (from blig be).

The inflexion of these radical 1 and u stems is exactly the same as

that of the derivative I and a stems given above-

Irregularities.

99. 1. páti (Gk. πόσι-s) m. husband is irregular in the D.G.L. a.: páty-e, páty-ur,1 páty-au; while the L in this sense has the normal form paty-a. When it means lord, either as a simple word or as final member of a compound, it is regular : D. patay-e, brhas-patay-e, G. pate-s, prajapate-s, L. go-patau; while the I. in this sense is formed with na: pati-na, brhas-patina. The f. is patni (Gk. πότνια) wife and lady.

The anomalous ending appears to be due to the influence of the Ah.O. in the names of relationship (101) in r like pitur, O. of pits failur.

- a. The f. jáni w/o takes the anomalous ending ur in the G.: jány-ur.¹
 It has the further anomaly of forming its N. jáni like the derivative i declaration.
- 2. sákh-i m. friend, besides having irregularities like páti in the weak cases of the s., has a strong stem formed with Vrddhi: N. sákhā, A. sákhāy-am, I. sákhy-ā, D. sákhy-e, Ab.G. sákhy-ur, 'V. sákhe.' Du. sákhāy-ā and sákhāy-au; Pl.N. sákhāy-az, A. sákhi-n, I. sákhi-bhis, D. sákhi-bhyas, G. sákhi-n-ăm.
- a. In the RV. skihl occurs as the final member of sight compounds in which it is inflected in the same way and is also used as a f.; e.g. murit-sakhā N, m. f. having the Maruts as friends.
- 3. ari décout is irregular in forming several cases like the radical i stems (except in accentuation); sing. A. ary-ám (beside ari-m) m., G. ary-ás m.; pl. N. ary-ás m. f., A. ary-ás m. f.
- n. The VS. has also the N. s. arf-s, beside the regular ari-s of the RV. dvi about (Lat. eri-s) also takes the normal ending as in the G. s.: avy-as. vi m. bird has in the RV. the N. s. v6-s beside vi-s.
- 4. The neuters ákşi eye, ásthi bone, dádhi curis, sákthi thigh, form their weakest cases from stems in án; e.g. I. dadhn-å, sakthn-å; G. akṣṇ-ás, asthn-ås, dadhn-ås. Du.N. ákṣi-ṇi (AV.), I. sákthi-bhyām, G. akṣṇ-ós, but sákthy-os (VS.). In the pl. the an stems are used in the N.A. also: akṣāṇ-i (beside ákṣī-ṇi, AV.), asthān-i (beside ákṣī-ṇi, AV.), asthān-i (beside ákṣī-ṇi, AV.), sakthān-i; I. akṣā-bhis, asthā-bhis; D. asthā-bhyss.
- 5. dyú m. f. sky (originally diu, weak grade of dyo, 102, 3) retains this stem before consonant terminations (taking Vrddhi in the N.V. s.), but changes it to div before vowels:

Pormed regularly like suce from adel.

Industrial, like paryur, by the names of relationship in r (101).

Sing. N. dyán-s (Zeús = Ajeús). A. div-am. I. div-a. D. div-6. Ab.G. div-as (Airos). I. div-i (Airi). V. dyau-s3 (Zev).

Pl.N. div-as. A. m. dyun, f. div-as. I. dyu-bhis.

100. C. Stems in I and u are mostly f. when substantives, but a great many as final members of compounds are

adjectives used in the m. as well as f.

I. The ī stems are very differently inflected according as they are radical (a) or derivative (b). The analogy of the primary radical group (1) is closely followed both in inflexion and accentuation by a secondary group (2) of about eighty polysyllabic stems which, though formed with derivative i, are for the sake of clearness best treated as

a division of the radical group.

a. The normal endings as they appear in the inflexion of consonant stems are taken throughout this declension. The G. pl., however, preserves the normal ending am in one single form only (dhiy-am), nam being otherwise always added. The N. s. always adds s. Accentuation on the final syllable of the stem is characteristic of this declension, and, except in monosyllabic stems, the acute remains on that syllable throughout. Before vowel endings the I is split to iy in monosyllabic nouns, even when they are final members of compounds, as A. dhiy-am, pl. N. nana-dhiy-as having diverse intentions; but in roots as final members of

3 These two forms, which occur only in the RV. or passages borrowed from it, always mean days.

The stem div, the Samprasarana form of dyav, has made its way into the strong cases, A. s. and N. pl., owing to the very frequent weak cases div-da, &c., which taken together occur more than 350 times in the RV.

² i.e. diau-s to be pronounced as a disyllable. The s of the N. is retained in this form.

^{*} Except accented -dhi, as a-dhiam (but su-dhi follows the general rule, as an-dhiy-as).

compounds only when two consonants precede, as yajña-priy-am sacrifice-loving, but yajña-nyam (= yajña-niam) leading the sacrifice. Otherwise i is always written as y, but is invariably to be pronounced as i, as nady-am pronounced nadiam stream.

The monosyllabic stems belonging to the radical class are the feminines this thought, bhi fear, sri glory, and the m. vi receiver (occurring only once in the N. s.). The compounds of the first three, being mostly Bahuvrihis (189), and the compounds formed from the roots kri buy, ni leud, pri love, mi diminish, vi move, si lie, sri mix, being mostly accusative Tatpurusas (187), are both m. and f.

The secondary group consists of more than eighty polysyllabic stems accented on the final syllable and probably for this reason following the analogy of the radical compounds. Excepting about half a dozen they are substantives, nearly all f. The masculines are ahi serpent, rathi charioteer, and about eight compounds.

b. The declension in derivative i embraces a large number of stems formed by means of the suffix i (originally yā) largely to supply a f. to m. words, and not normally accenting the suffix. It also includes a large number of miscellaneous f. stems of an independent character having no corresponding m., as šāc-i might. It includes seven m. stems, five of

³ In the secondary radical group (a 2, p. 87) the t is split only in samudal and partly in cakel.

² The resolved forms given below are spelt with i (not iy as they may have been prenounced) so as to avoid confusion with the written forms of the Samhitā text that are spelt with iy. Again the resolved rowel is given as I (not i) because long yowels are regularly shortened in pronunciation before yowels (p. 22, notes 1 and 5).

The exceptions are smoothy stems in which the preceding syllable, having been reduced, throws the accent forward, e.g. urd, f. urv-f., role; or in which, as proper names, the accent has shifted to indicate a change of meaning, e.g. asked a river, but asked to back.

which are proper names: Tiraści, Námī, Pŕthī, Mātalī,

Sóbhari, besides rastri ruler, sirí weuver.

The inflexion of these stems differs from that of the radical I stems in three respects:-(1) no s is added in the N. s. m. or f.; (2) the endings diverge considerably from the normal ones, the s. A. taking m, the D, ai, the Ab.G. as, the L. am, the pl. N.V.A. s; (8) stems accented on the final vowel shift the acute to the ending in the weak cases of the s., in the G.L. du., and in the G. pl.

In the later language the derivative group (b) absorbs the secondary radical group (a 2), while borrowing from the latter the N.A.Y. do, and the N.V. pl, forms,

PLUBAL.

N. dhiy-as	rathi-as	devi-s
A. dhiy-as	rathi-as	dovi-s
I. dhī-bhis	rathi-bhis	dovi-bhis
	D. rathi-bhyas	devi-bhyas
G. dhi-n-am	G, ruthi-n-am	devi-n-ăm
L dhī-sú	L rathi-su	devi-su
	and the same of th	V. dévi-s

a, Other words belonging to the secondary radical class (a 2) are : kumāri gai (A. kumāriam), tandri wearines (N. tandris), dūti mesenger (N. dūtis), nadi sireum (A. uadiam), lakami mark (N. lakamis, A. lakamism), simhi limum (N. simhis, A. eimhiam).

B. strl. seesas, originally a disyllable, is inflected as a radical monosyllable stem in the sing. A. and pl. N.A. I. : striy-am; striy-as, stri-bhis (accent); but retains traces of its derivative origin in the s. N. stri (no s), D. striy-as* (AV.), G. striy-as, L. striy-am (AV.).

II. The u declension, which comprises both radical and derivative stems, is much more homogeneous than the i declension. The inflexion of these two classes corresponds exactly to that of the two divisions of the radical i declension. Practically all the stems in this declension are oxytones (including both the compound radical and the derivative stems).

a. In the radical class there are seven monosyllabic stems, five of which are f.: dû gift, bhû earth, brû brow, syû thread, srû stream; one m. and f.: sû begetter and mother; one m.: jû speeding, steed. There are further two reduplicated f. substantives and one adjective: juhû tongw; juhû sacrificial spoon; jôgû singing aloud. Finally, there are about sixty compounds, almost exclusively formed from about eleven roots, e. g. pari-bhû surrounding.

dhi-n-im occurs seven times in the RV., dhiy-im only once, the latter being the only example of the normal ending.

^{*} In B, this form is used for the O.; e.g. striyal payah moman's with,

b. The derivative class comprises two divisions: the one consists of about eighteen oxytone t substantives, several of which correspond to m, or n, stems in u accented on the first syllable, e.g. a-grú (m, é-gru) maid; the other and more numerous division consists of oxytone f, adjectives corresponding to m, oxytones, e.g. babhrú (m. babhrú) brown.

some are taken throughout this decleration (radical and derivative). The G. pl., however, takes the normal am in uncompounded radical atems only, but namin all others. The N. a always adds a. Before rowel endings the a is split into uv in monosyllabic nouns and generally in compounds with roots as final member (even when preceded by a single consonant). In the minority of such compounds (some nine in the RV.) and in all derivative stems, it is written as v, but prenounced as u.* Time A. bhuv-am, a-bhuv-am present; but vi-bhu-am emissed, tanu-am.

The forms occurring if made from bhu earth and tanu body would be the following:

SINGULAE.

RADICAL	DESIVATIVE
N. bhū-s	tanu-s
A. bhuv-am	tanú-am
L bhuv-a	tanú-a
** ******	D. tanú-e
Ab.G. bhuv-ás	Ab.G. tanú-as
L. bhuy-i	, tanu-i
#11, project 100	L. tanů
	V, tanu

The derivative stems show an incipient tendency to be influenced by the inflection of the derivative i decleusion. The RV, has only one such form: evacrulam; the AV, has at least ten such; the VS, has A, purplealti-m courision, D, tanv-6i, G, tanv-8s. In B, the D, s. f. ending at is used for as; e.g. dhenvai retab the seed of the cour.

Judging by the only two forms that occur, bhuvam and jóguvam.
It is, huwavar, split in the derivative stems s-grå, kadrů Soma

^{*} Hence in such forms it is given below as u (abort because a vowel is shortened before another in pronunciation; op. p. 22, note 1).

101. D. Stems in τ (m. and f.), which in origin are consonant stems in derivative ar or tar, closely resemble an stems (90) in their declension. Derivative stems in τ consist of two groups, the one formed with the original suffix ar, the other with tar. The former is a small group of only eight stems, the latter a very large one of more than 150. Both groups agree in distinguishing strong and weak cases. The strong stem ends in ar or ar, which in the weak forms is reduced to τ before vowels and τ before consonants. Both groups further agree in dropping the final of the stem in the N. s. m. f., which case always ends in \bar{a} . They resemble the vowel declension in adding the ending τ in the A. pl. m. and τ in the A. pl. f., and in inserting τ before the τ m of the G. pl. They have the peculiar ending τ in the G. s.

1. The stems in ar are: m. dev-f husband's brother, nf mun; f. us-f dawn, nanandr husband's sister, svasp sister; n. ah-ur day, udh-ar udder, vadh-ar weapon, which

i Except unr-an.

Except svåer-am end når-am.

Except nár-as and nar-ás,

[&]quot; This word is probably derived with the suffix ar.

[&]quot; In this word the r is probably radical : ava-sar.

occur in the N.A. s. only." The forms that occur of the first five stems are:

a. Sing. A. devár-am. Pl. N. devár-as. L. devf-şu.

b. Sing, A. nár-am (ἀ·νέρ-α). D. nár-e. G. nár-as. L. nár-i (Ep. Gk. ἀ·νέρ-ι). Du. N.A. nár-ā. V. nár-ā and nár-au. Pl. N.V. nár-as (Ep. Gk. ἀ·νέρ-ες). A. nř-n. 1. nř-bhis. D.A. nř-bhyas. G. nar-ām and nṛ-ṇ-ām.² L. nř-su.

c. Sing. G. usr-ás. L. usr-í and usr-ám.' V. úsar.

Pl. A. usr-as.

d. Sing. G. nánāndur. L. nánāndari.

c. Sing, N. svásā. A. svásār-am. I. svásr-ā. D. svásr-c. Ab.G. svás-ur. Du. svásār-ā, -au. I. svásr-os. Pl. N. svásār-as. A. svásē-s. I. svásp-bhis. G. svásr-ām and

svásř-n-am.

2. This group includes two subdivisions, the one forming its strong stem in tar, the other in tar (Gk. -τηρ, -τωρ. Lat. -tor). The former consists of a small class of five names of relationship: three m., pi-tar futher, bhra-tar brother, nap-tar grandson, and two f., duh-i-tar daughter and ma-tar mother, together with the m. and f. compounds formed from them. The second division consists of more than 150 stems (including compounds) which are either agent nouns accented chiefly on the suffix, or participles accented chiefly on the root. These stems are never f., and only four are n.

In the redecleration three stems are to be distinguished: the strong, the er tar; the middle, tr; and the weakest, tr. The names of relationship take the Guna form, agent nouns the Vrddhi form of the

and udh-ar form their other eases from the an atoms ah-au and udh-an. Cp. 91. 6. 2 Often to be pronounced armam.

^{*} Pollowing the analogy of the derivative i declension.

^{*} swasr-am and nar-am are the only two forms of the z decimation in which am is added direct to the stem.

⁶ The strong stem n\u00e1p-tar does not occur in the RV., n\u00e1p\u00e1t taking its place.

strong stem. The inflexion of the m. and f. differs in the A. pl. only. The sing. G. is formed in ur, the L. in ari, the V. in ar ; the pl. A. m. in tra. f. tra. G. in train.

The inflexion of the three stems da-tf m. giver (δω-τήρ, da-lor), pi-tf m. father (πά-τήρ, pà-ter), mā-tf f. mother (μή-τηρ, mā-ter) is as follows:

SINGULAR.

N, dātā A. dātār-am	pità pitár-am	mátá mátár-am

L dătf-bhis D.Ab. dătf-bhyas	pitŕ-bhis pitŕ-bhyas	mátŕ-bhis mátŕ-bhyas
G. dātr-ņ-ām	pitř-ņ-ām	mātr-ņ-ām
L. dătf-șu	pitŕ-su	mātŕ-șu
V. dátār-as	pitar-as	mátar-as

s. nap-tr in the RV. cocurs in the weak stem only: Sing, L naptr-5, D. naptr-5, G. napt-ur. Pl. I. naptr-bhia. It is supplemented in the strong forms by napat (Lat. sept.): Sing, N.V. napat. A. napat-am.—Du. N.A. napat-5.—Pl. N.V. napat-as. In the TS occurs naptar-am

like avasar-am among the r stems .

& The only a stame occurring are sthar-if prop, dhms-if smile, stha-if stationary, vi-dhar-if meting out, and of those only about half a decen forms occur. The only oblique cases met with are the G. sthatur and the L. dhmatari. The N.A. a owing to its rarity seems never to have acquired fixity in the Veda, but sthatar represents the normal form. In B. the N.A. form in r begins to be used in an adjectival sense: bharif supporting, janayitf create.

c. The f. of agent nouns in tr is formed with I from the weak stem

of the m., e. g. janitr-I mether (inflected like devi).

102. E. Stems in ai, c, au. The only stems in diphthongs are: rái m. and (rarely) f. scalth, gó m. bull, f. cow, dyó m. f. sky, náu f. skip, gláu m. f. lump. They form a transition from the consonant to the vowel declension; for while they take the normal endings like the ordinary consonant declension, they add s in the N. s. m. f. and have a vowel before the endings with initial consonant. There are no neuter forms.

rát appears as rāy before vowels and rā before consonants. The forms occurring are: Sing. A. rá-m (Lat. re-m).
 ráy-å. D. rāy-ê (Lat. rē-i). Ab.G. rāy-ås.—Pl. N. rāy-as. A. rāy-ås.

2. go has as its strong form gau which appears as gā in the A. s. and pl. The Ab.G. are irregular in adding s only instead of ns.* The forms occurring are: Sing. N. gáu-s (βοῦ·s). A. gā-m (βῶ·s). I. gáv-ā. D. gáv-e. Ab.G. gó-s. L. gáv-i.—Du. gáv-ā, -au.—Pl. N. gáv-as. A. gā-s. I. gó-bhis. D. gó-bhyas. G. gáv-ām and gó-n-ām.* L. gó-şu. V. gáv-as.

Rarely ray-as; once ra-e (SV.).

² As regards accentuation this word is not treated as a monosyllabic stem, never shifting the accent to the endings.

^{*} This form, which follows the vowel declaration and is much less common than gav-am, occurs at the end of a Pada only.

3. dyó m. f. sky (ep. 99. 5) is declined like gó. The forms occurring are: Sing. N. dyáu-s¹ (Zeứ). A. dyắm (Lat. diem). Ab.G. dyó-s. L. dyáv-i. V. dyáu-s and dyàu-s¹ (Zeŷ).—Du. N.A. dyáv-a.—Pl. N.V. dyáv-as.

náu is inflected quite regularly as far as can be judged by the few forms occurring: Sing. N. náu-s (ναῦ-ς).
 N. náv-am (νῆξα). I. náv-a. G. nāv-ás (νηξ-ός). I. nāv-i (νηξ-ί). —Pl. N. náv-as (νῆξ-ες, nāp-ες). A. náv-as (νῆξ-ας).
 I. náu-bhis (ναῦ-φι).

5. gláu occurs in two forms only: Sing. N. gláu-s and Pl. L glau-bhís.3

Degrees of Comparison.

103. 1. The secondary suffixes of the comparative tara (Gk. -7epo) and the superlative tama (Lat. -timo) are regularly added to nominal stems (both simple and compound), substantives as well as adjectives, generally to the weak or middle stem; e.g. priyá-tara denver, tavás-tara stronger, vápus-tara more wonderful, bhágavat-tara more bounteous; vṛṭra-tāra a worse Vṛṭra; bhūri-dāvat-tara giving more abundantly; śaávat-tamā most constant; ratnadhā-tama best bestower of treusure; hiranya-vāši-mat-tama best wielder of the golden uze; rathi-tama best charioteer.

a. The final n of the stem is retained before these suffixes; e.g. madin-tara core-gladdening, vrsån-tama most manig. An n is some-times even inserted; e.g. surabhi-n-tara core fragions; rayin-tama ary rick.

The same as the N. of dyn (99, 5).

^{*} That is, diames with the proper V. accent, but with anomalous retention of the N. a.

The N. pl. glav-as also occurs in the AB.

^{*} The - condary comparatives and superlatives are commoner than the primary in the proportion of three to two.

- b. In a few instances the strong stem of a present participle is used; e.g. vradhan-same being seed mighty, adhan-tame most eitherious; and the weakest stem of a perfect participle; vidin-tame wear; milhus-tame mean overlous.
- e. These secondary suffixes are occasionally found added to the primary comparatives and superlatives, s.g. áréstha-tama send leantiful
- of. They also form a comparative and superlative from the proposition and up: at-tars higher, at-tama' highest.
 - 4. These suffixes t form their f. in 5; e.g. matf-tama mod motherly.
- 2. The primary suffix of the comparative iyams (Gk. -100). Lat. -101) and that of the superlative isthm (Gk. -1010) are added directly to the root, which is regularly accented and gunates i and û, but leaves a unchanged apart from nasalization in a few instances. Final radical a combines with the initial of the suffix to e, which is, however, usually to be read as two syllables. Examples are: téj-iyams sharper, tój-iṣṭhm very sharp (tij be sharp); jáv-iyams quicker, jáv-iṣṭhm quickest (jū be swift); yáj-iyāms sacrificing better, yáj-iṣṭhm sacrificing best; mámh-iṣṭhm most liberal (mah hestow abundantly); jýéṣṭhm greatest and jyeṣṭhā eldest (jyā overcome).
- a. In many instances these superlatives attach themselves in meaning to derivative adjectives, being formed from the root which the latter contain; e.g. an tyams smaller, an isthe smaller beside an unforth; dav-tyams furfar beside do-ra for; dragh-lyams longer, dragh-lights longer beside dirgh-4 long; lagh-lyams lighter boside lagh-4 light; inthe longer beside dirgh-4 long; lagh-lyams lighter boside lagh-4 light; var-lyams untiles, var-isthe seidest boside ur-4 reide; aas-lyams untiles, var-lyams untiles, var-lighter beside of an modely; barh-lighte erg fafty beside byh-ant great; yav-isthe georgest beside yav-an posts; var-isthe most scotlent boside var-a choice; aadh-isthe straightest boside sadh-4 straightest boside sadh-4 straightest

With the accent of the ordinal suffix tama,

When used as an ordinal suffix tama forms list f. in secented 1 (op. 107).
 Except lyestha meaning sides and kanistha meaning pumped.

- 8. In a few examples the suffix is added to the derivative form of the root which appears in the adjective; thus his isthe (decore-1) healds his n (decore-1) see/t (from an exact); thesp-types source boside tikens show (from til be show); nov-lyings seems, nov-inthe second beside nove and types of the control of the
- a. Beside the usual forms in īyāms there occur about half a dozen alternative comparatives made with the shorter form of the suffix, yāms: táv-yāms (táv-īyāms) stronger; náv-yāms (náv-īyām-s) newer; pān-yāms (pān-īyāms) more wonderful, bhū-yāms (bhāv-īyāms) becoming more, greater; rābh-yāms (rābh-īyāms) more violent; sáh-yāms (sāh-īyāms) stronger. Some half-dozen more have no alternative form beside them; jyā-yāms greater, older; pré-yāms dearer, pré-ṣṭha dearest (priyá dear); vás-yāms better, vás-iṣṭha best (vásu good); śré-yāms (kpēlœr) better, śré-ṣṭha best (śrī be bright), sán-yāms (Lat. sen-ior) older (sána old), sthé-yāms most steadfast (sthi-rá firm).
- b. Some comparatives and superlatives belong to their positives in sense only; a.g. kán-iyāms' lesser, younger, kán-iṣṭha smallest' and kan-iṣṭhá youngest (álpa small); néd-iṣṭha (Av. naæd-yah) nearer, néd-iṣṭha (Av. naæd-iṣṭa) nearest (antiká near), várṣ-iṣṭha highest (vṛddhá grown up).

From the adj. papa bad, the radical element of which is uncertain, is formed direct the comparative pap-trams in the TS.

² Here the vowel remains unchanged. This is also the case in the corresponding superlative bhu-y-isths, which moreover adds the suffix with an intervening y.

^{1 (}p. kan-ya giri (= kania), Gk, surd-r (= enryd-r).

Appears in this sense in the TS.

Dp. váry-man n., vary-mán m. height.

- 100,000,000, nyarbuda n.

and is an old dual form.

* The cardinals between 10 and 20 are Drandva compounds formed by prefixing the accented unit to dasa im.

Here 6ks stands for 6ks under the influence of dva-dass.

* Here the N. du. is retained instead of the stem form dva.

* trayo, for traysa (45. 2), is the N. pl. (105).

catur as first member of a compound is regularly accented eatur-.

For sas-dass through sas-dass (ep. 69 c, note 8).

This and the remaining cardinals are substantives. Those from accept to ninety are either old compounds (adj. and substantive: neo meader, &c.) or derivatives formed with -ti.

* catvarim for catvart, n. pl. (105), like vimeati and trimeat.

10 Sixty to ninety are abstract L nouns derived from the simple cardinals (except asi-ti) meaning hand of ton, &c.

it asl- is radically cognate to as-ta.

- a. The numbers intermediate between the decades 20-100 are Dyandva compounds formed by prefixing the accented unit to the decade; e. g. astā-viiņšati 28; éka-triṃšat 31; trāyas-triṃšat 33; nāva-catvāriṃšat 49; nāva-saṣṭi 69; nāvā-saṣṭi 69; nāvā-saṣṭi 69; pāūca-navati 95, ṣāṇ-ṇavati 96, aṣṭā-navati 98; éka-šatam 101, cātuḥ-šatam 104, triṃšāc-chatam 180.
- a. Intermediate numbers may also be expressed by adding together unit and decade with or without ca; e.g. nava on navatim on ninety and aim, navatim nava ninety-nine.
- 8. In the TS, the number preceding a decade is also expressed by 6kkin ná by one not minus one; thus ékkin ná rimústí fromly less one 19; ékkin ná catvárimáát 30; ékkin ná sasjí 50; ékkin násití 79; ékkin ná satám 99.
- b. There are two ways of forming multiples. The larger number in the du. or pl. may be multiplied by the smaller used as an adjective; e.g. dvé šatě 200; sastim sahásrā 60,000; trini šatā tri sahásrāni trimšáo ca náva ca 3,339. Otherwise the multiplier prefixed to the larger number forms with it a possessive (adjective) compound accented on the last syllable; e.g. tráyastrimšat tri-šatāḥ ṣaṭ-sahasrāḥ 6,883.
- a. Multiples of numbers below 100 are sometimes formed in these two ways; e.g. navatic nava nine nineties = 810; tri-sapté 21, tri-navé 27,

Declension of Cardinals.

- 105. Only the first four cardinals, like other adjectives, distinguish the genders. éka one, while inflected chiefly in the s., forms a pl. also in the sense of some; dvá heo is of course inflected in the dual only.
 - 1. éka is declined like the pronominal adjectives viáva

¹ A N. f. do. form of the in the sense of a certain appears in the yuvant (AV.) a certain pure of auditous,

and sarva (120 b). The forms occurring in the Samhitas are:

m. z. N. ékas. A. ékam. I. ékena. G. ékasya. I. ékasmin, Pl. N. éke. D. ékebhyas.

f. s. N. ékā. A. ékām. I. ékayā. G. ékasyās. Pl. N. Akins.

n. s. N. ékam. Pl. N. ékā.

2. dvá two is declined quite regularly as a dual, like priya (97 A. 1). The forms occurring are:

m. N. dva, dvau. 1. dvabhyam. G. dvayos. L. dvayos. f. N. dvé. L dvábhyam.

n. N. dvé. L. dváyos.

3. tri three is declined in the m. n. pl. quite regularly, like súci (98 B). The f. stem is tisf," the inflexion of which differs in the N.A. from other r stems, by adding the normal ending as to the unmodified stem. The forms occurring are :

m. Pl. trayas. A. trin. I. tribhis. D. tribhyas. G. trinam. L. trişu.

f. N. tisrás. A. tisrás. I. tisrbhis. D. tisrbhyas. G. tisrnam.

n. N.A. tri, trini.

4, catur four in the m. n. has the strong stem catvar (cp. Lat. quatuor). In the G. pl., though the stem ends in

The only form of the Ab. s. occurring, exat, follows the nominal decleusion; it is used in forming compound numerals, shan us trimadt 29, &c. (TS.); éksamát, used in the same way, occurs in a B. passage of the TS.

^{*} The dual form is ratained in the numeral compound dva-dasa 12. Otherwise dvi is used as the stem in compounds, as dvi-pad apel, and in derivation, as dvi-dhā ta noo sonys, &c.

Probably for tri-of, formed like sva-zr (101, 1, note 5).

[·] Except nar-as (101, 1 r),

³ Once written tisenam, though the r is actually long metrically.

a consonant, a is inserted before the case-ending. The f. stem is catasp, which is inflected exactly like tisf and shifts its accent like pance. The forms occurring are:

m. N. catvár-as. A. catúr-as. I. catúr-bhis. D. catúrbhyas. G. catur-nām.*

f. N. A. catasr-as. I. catasf-bhis. D. catasf-bhyas. G. catasrnam.

n. N.A. catvar-i.

106. The cardinals from five to nineteen, though used adjectivally, do not distinguish gender and take no ending in the N.A.* They also have in common the peculiarity of accenting a before the consonant terminations * and the final syllable in the G.

a. The forms of sas six occurring in the Samhitas are: N.A. sat (27). L. sad-bhis. D. sad-bhyas. L. sat-su.

b. The forms of asta eight indicate that it was an old dual. The forms that occur are:

N.A. asta, astau. Lasta-bhis. D. asta-bhyas. Lasta-su.

c. páñca fice as well as saptá seven and the cardinals from nine to nineteen are declined like neuters in an (90. 2) except in the G., which follows priyá (97). The forms occurring are:

N.A. páñes. I. pañeá-bhis. D. pañeá-bhyas. G. pañcănâm. L. pañeá-su.

Like san-nam, the G. of san, which, however, does not seem to occur in any of the Samhitas.

With accent on the final syllable like the (i. of paties, &c.

[&]quot; Except asta and astau which are N. A. dual forms,

[·] Except and, which accents the terminations.

^{*} Meaning probably the two tetroits (perhaps with reference to the dugers of the two hands).

[&]quot; asta is the stem used as the first member of compounds in the RV., but asta begins to be used in the AV.

196-167] SYNTAX OF CARDINALS. ORDINALS 101

N.A. saptá. I. saptá-bhis. D.Ab. saptá-bhyus. 6, saptánám.

N.A. náva. I. navá-bhis. D. navá-bhyas. G. navánám.
N.A. dáśa. I. daśá-bhis. D. daśá-bhyas. G. daśánám.
L. daśá-su.

N.A. ékādaśa. D. ekādaśá-bhyas. N. dvādaśa. D. dvādaśá-bhyas. N. tráyodaśa. I. trayodaśá-bhis. D. trayodaśá-bhyas. N. pañcadaśa-bhyas. D. pañcadaśá-bhyas. N. sodaśa-bhyas. N. saptádaśa. D. saptadaśá-bhyas. N. návadaśa-bhyas. N. návadaśa. I. navadaśá-bhis. D. ékān ná vim-šatyái (TS.).

d. The cardinals for the decades from twenty to ninety with their compounds are f. substantives, nearly always inflected in the sing, and according to the declension of the stem final; e.g. N. vimšati-s. A. vimšati-m. I. vimšaty-ā. N. trimšát. A. trimšát-am. I. trimšát-ā. L. trimšát-i. If the sense requires it these numerals may be used in the pl.; e.g. náva navatis nine nineties; navanám navatinám of nine nineties.

šatá hundred und sahásra thousand are neuters, which may be declined in all numbers; e.g. dvé šaté two hundred; saptá šatáni seven hundred; tri sahásrani three thousand.

a. In the group set to minutess the hare stem may be used in the oblique cases agreeing with substantives; e.g. saptá hótrbhíh seith sum priess (ep. 194 B s).

Ordinals.

107. The ordinals, being all adjectives ending in a, are declined in the m and n like priya. The f. is formed with I (declined like dovi) except in the first four, which take a.

The ordinals from first to tenth are formed with various suffixes, viz. (t)iya, tha, thama, ma. The formation

of the first four is somewhat irregular. The stems of the ordinals from eleventh to nineteenth differ from those of the corresponding cardinals only in being accented on the final syllable; their inflexion differs from that of the latter in following priyá. Thus ekādaśá eleventh forms the cases: m. s. A. ekādaśá-m. Pl. N. ekādaśásas. A. ekādaśan. I. ekadaśais.

The ordinals from twentieth to ninetieth fineluding their compounds), which also end in accented a, seem to be abbreviated forms of the corresponding cardinals; e.g. catvarimsá forticth,

The ordinals for hundredth and thousandth are formed with the superlative suffix tama accented on the final svilable: śata-tamá, sahasra-tamá,

Ist pra-thamá," f. a. 2nd dvi-t-iya, f. a. 3rd trt-iya, f. a (Lat. tertiu-s). tur-iya, f. a (for caturiya through k-tur-4th iya). catur-thá, f. i (rérap-10th daśa-má (Lut. deci-To-s, Lat. quartu-s).

5th panca-má; f. î. 6th sas-thá (Lat. ser-tu-s). saptá-tha, 7th sapta-má (Lat. sepli-11111-8). 8th asta-má. 9th nava-má.

ши-8).

¹ Only about three examples of this formation have been noted in the Samhitas, and four in the Brahmanas.

² Sahasra-tama has been noted in B. only.

² Probably for pra-tama formost, the th being due to the influence of calur-the, &c.

^{*} Both prathama and trifys have one ease-form each according to the pronominal declension in the AV. : G. prathamary as and L. trif-PREVAIL.

¹ From an older dvi-td accord.

[&]quot; From an older ty-th third,

When used in the fractional sense of one-fourth accented on the first syllable; thriya (AV.); similarly in B. caturtha one-fourth, tftiya one-Mird,

107-109] ORDINALS. NUMERAL DERIVATIVES 103

11th ekā-dašā. 21st eka-vimšā. 34th catus-trimšā (B.) 40th catvārimšā. 48th astā-catvārimšā. 52nd dvā-pañcāšá (B.). 61st eka-ṣaṣ-ṭá (B.). 100th šata-tamā. 1000th sahasra-tamā (B.).

Numeral Derivatives.

108. A number of derivatives, chiefly adverbs, are formed from the cardinals.

a. Multiplicative adverbs: sa-kft once (lit. one making); dví-s twice (Gk. čí-s, Lat. bi-s); tri-s thrice (Gk. τρί-s, Lat. tri-s); catús four times (for catúr-s). Others are expressed by the cardinal and the form kftv-as times (probably makings A. pl. of kftu) which is used as a separate word except in asta-kftvas (AV.) eight times; e. g. dáša kftvas (AV.) ten times, bhūri kftvas many times.

b. Adverbs of manner formed with the suffix dhā: dví-dhā in two ways or parts, tri-dhā and tre-dhā, caturdhā, pañca-dhā, şo-dhā, sapta-dhā, aṣṭa-dhā, nava-dhā, sahasra-dhā.

c. A few multiplicative adjectives derived with the suffixes a, taya, vaya meaning -fold: tray-a threefold, dvay-a tenfold; catur-vaya fono-fold.

PRONOUNS

109. Pronouns differ from nouns both in origin and declension. They are derived from a small class of roots with a demonstrative sense, and they have several distinct peculiarities of inflexion. These peculiarities have in varying degrees been extended to several groups of adjectives.

A. Personal Pronouns.

This class displays the greatest number of peculiarities: they are for each person derived from several roots or combinations of roots; they are specially irregular in inflexion; they do not distinguish gender, nor to some extent even number. Some resemble neuters in form; a few have no apparent case-ending; in two of them the A. pl. m; does duty as f. also.

DENG DEATE			FLURAL			
A.		tv-ám thou tv-ám theo tvá tvá-y-á		yû-y-ám ¹ ye yuşmân ² you		
	ma-hyam 1 to me		The Court of the C	yuşmá-bhyam for you		
	mád from me	tvád from thee	asmád from	yuşmad from		
	má-ma of me	tava of thee	asmåka-m '	yuşmaka-m'		
L	mú-y-i in me	tvá-y-i in thee	asmå-su * in us asmė *	yuşmé in you		

¹ Cp. Lat. wild and 10%.

STROTTLAN

* Only this, the normal form (- tv&-i), is found in the RV. The

irregular tvåyi appears in the later Samhitas.

* asmikam and yuşmikam are properly the A. u. s. of the possessives asmika our. yusmika sour.

2 sames is a new formation following the analogy of asmabhis.

a asmé is also used sa D.

^{*} asman and yuşman are new formations according to the nominal decleration. The stems are compounds of the pronominal elementa a+sma and yu+sma. The VS, twice has the distinctly t, new formation yuşmas.

^{*} Changed from original yus am by the influence of vay-am.

Dual. N. vám and avám (SB.) we two. A. avám (SB.) us two. Ab. ava-bhyam (K.) and avád (TS.) from us two. G. aváy-os (SB.) of us two.

N. yuvám ye two. A. yuvám you two. I. yuvá-bhyám and yuvá-bhyám by you two. Ab. yuvád from you

tico. G. yuv-os and yuvay-os of you tico.

a. The following unaccented forms, inadmissible at the beginning of a sentence, are also used: Sing A. mã, två. D.G. me '(Gk. per), te '(Gk. rer). Du. A.D.G. nau (Gk. vér), vàm. Pl. A.D.G. nau (Lat. sés).

vas (Int. ziii).

b. The usual stems of these pronouns used in derivation or as first member of compounds are: ma, asma; tva, yuva, yusua; thus asma-druh hading us; tva-yata presented by thee; yuva-yu desiring you two; yusua-yant desiring you. But the forms mad, asmad, tvad occur a few times as first member of compounds; thus mat-krta does by me; asmat, sakhi having us as companions; tvad-yani derived from thee.

B. Demonstrative Pronouns.

110. The inflexion of these pronouns, as compared with the nominal a declension, has the following peculiarities:

I. in the sing. d is added instead of m in the N.A. n.; the element sma appears between the root and the ending in the D.Ab.L. m. n., and syn in the D.Ab.G.L. f.; in (instead of i) is the ending in the L. m. n. 2. in the pl. the N. m. ends in a instead of as; the G. has a instead of n before the ending am.

The stem tá that (also he, she, il) may be taken as the type for the inflexion of adjectival pronouns:

¹ vám (probably abbreviated for avám), occurring once in the RV., seems to be the only N. du. form found in the Samhitas.

³ The N. avam (SB.) and A. avam (K. SB.) seem to have been the normal forms judging by yavam and yavam.

yay-6s occurs in the RV., yavay-os in the TS.

^{*} me and to, originally L., have come to be used as D. and G.

DUAL.

N.A. m. ta, tau, f. te, n. te. I.Ab. m. f. ta-bhyam. G.L. m. n. tay-os.

n. The stem to is frequently used in derivation, especially that of adverbs, as to-the thus; the n. form tod often appears as first member of a compound; s. g. tod-appea accustomed to the evert.

- a. There are three other demonstratives derived from ta:
- 1. e-ta " this here is inflected exactly like ta. The forms that occur are:

* ta-m, th-m, td-d = Gk, 76.0, 79.0, 76.

* Sometimes téna.

* These forms have the normal ending e: = tasma-e, tasya-e. In B. tasyal is substituted for the G. tasyas.

The Chandogya Upanisad once has saamad.

" Homeric Gk. raio (for sisjo).

stemin occurs nine times in the RV., tasmin twenty-two times.

" Cp. Lat. is server.

Gk, raise (for raram), ep. Lat. is-throne.

10 The stem used in derivation and composition is eta; e.g. etá-vant so great, etá-diá meh. In B. etad is sometimes thus used: etad-diá giring this, etan-máya consisting of this.

³ On the Sandhi of sas op. 48; sa, sa, tá-d = Gk, δ, ή, τό; Gothic sa, ε, that-a (Eng. that, Lat. is-fud).

m. Sing. N. eşá-s (67, 48). A. etám. I. eténa. D. etásmai. Ab, etásmad. G. etásya. - Du. N. etá, etáu. -Pl. N. eté. A. etán. I. etébhis, etáis. D. etébhyas. i. Sing. N. esa. A. etam. I. etáya. L. etásyam. - Du. N. eté. Pl. etás. A. etás. I. etábhis. L. etásu.

n. Sing. N. etád. Pl. N. etá, etáni.

2. tyå is derived from tá with the suffix ya and means that. It is common in the RV., but rare in the later Samhitas. Unlike ta it is used adjectivally only, hardly ever occurring without its substantive. It never begins a sentence except when followed by the particles u, cid, nú, or sú.

The forms occurring are:

m. Sing. N. sya. A. tyam. G. tyasya. - Du. N. tya. -Pl. N. tyé. A. tyán. I. tyébhis.

I. Sing. N. sya. A. tyam, I. tya. G. tyasyas. - Du. N. tyé.-Pl N. tyás. A. tyás.

n. Sing. tyád. Pl. tyá, tyáni.

3. A very rare derivative is ta-ka this little, which occuronly twice in the RV, in the two A. sing, forms m. také-m, n. taká-d.

u, aimá seems to have the sense of an emphatic demonstrative. The forms occurring are: Sing. N. simas. V. sima. D. simasmal (u.). Ab, aimásmád. Pl. simé.

111. In the inflexion of the demonstrative which in the N. s. m. appears as ayam this here the two pronominal

1 See 48, note 3 ...

¹ It is also found a few times in B.

It is generally given the meaning of cory, all, but the above is the more probable sense.

roots i (which nearly always has a double ending) and a are employed, the former in the N. (except the m. s.) and A., the latter in all the other cases. The A. s. m. f. starts from i-m (the A. of i), which appears in the du. and pl. also, so that all these cases have the appearance of being formed from a stem imá,

SINGULAR.			PLURAL			
	MASC. 8-y-ám im-ám	seur. i-d-ám i-d-ám	fin. 1-y-ám 1-m-ám	MASC. i-m-ë i-m-ën	skut. i-m-å i-m-åni	i-m-ås i-m-ås
I. D. Ab.		á 1 mái mád 1	a-y-ā a-syái a-syás		bhís bhyás	ā-bhís ā-bhyás
G.		yá * mín	a-syas a-syam	0-q 0-q	-åm ui	ā-s-ām ā-sū

DUAL.

N.A. m. im-å, -áu. f. im-é. n. im-é. m. D.Ah. a-bhyām. m. G.L. a-y-ós.

¹ These two roots are frequently used in derivation; e.g. d-tra here, d-tha then; i-dh now, i-hh here, f-tara other.

^{*} From this stem is formed the adverb ima-tha thus,

^{*} Here i-m is the A. of i, from which is also formed the A. f. i-m and the n. i-d, both used as particles.

Also twice eus. and and the remaining oblique cases, when used as noons and unemphatic, may lose their accent.

The At., according to the nominal declenaion, ad is used as a conjunction.

⁸ Both asya and asmai may be accorded saya and asmai when emphatic at the beginning of a Pada. The form image occurs once in the RV, instead of asya; and imaginal in the AA, for asmai.

Instead of ask the form anaya occurs twice in the RV. : it is the only form from ana found in the Saunhitas.

112. The demonstrative corresponding to syam employed to express remoteness in the sense of that there, you, and having in the N. s. the curious forms m. f. a-s-au, n. s-d-as, uses throughout its inflexion the root a, but always in an extended form. The fundamental stem used in every case (except the N. s.) is a-m A. m. of a. This is extended by the addition of the particle u to amu,' which appears throughout the sing. (with ū in A. f.) except the N. In the pl. amū is the f. and amī the m. stem (except the A.).

The forms occurring are:

m. Sing. N. a-sáu.² A. a-m-u-m. I. amu-n-ä. D. amuşmai. Ab. amu-şmād. G. amu-şya.² L. amu-şmin.— Pl. ami. A. amun. D. ami-bhyas. G. ami-şām.

f. Sing. N. a-sáu." A. a-m-ú-m. I. amu-y-å. D. amúsyai. G. amú-syās.—Du. N. amú.—Pl. N. amú-s. A. amú-s.

n. Sing. N. a-d-as. Pl. N. amu.

a. The unaccented defective pronoun of the third person e-na* (he, she, it) is declined in the A. of all numbers, besides the I. s. and the G. du.

A. sing. m. ena-m, f. ena-m, n. ena-d.—Du. m. enau, f. ene.—Pl. m. enan, f. ena-s.

I. sing. enena. G. du. en-os (RV.), enay-os (AV.).

a. Another unaccented demonstrative pronoun restricted to the RV. (excepting one form in the AV, and the TS.) is two meaning our, second

¹ This stem is used in derivation; e.g. amú-tas thence, amú-tra these, amú-thà thus (B.).

There the pronominal root a seems to be compounded with an extended by the particle u : a-sá-u and a-sá-u.

This is the only example of syn being added to any but an a stem.

[·] Used adverbially, with shifted accent.

Here the natter a-d of the pronominal root a is extended with the suffix as.

⁴ Here we have the same o (L. of a) as in 6-kn one, e-vá thus.

s one, generally repeated in the sonse of one swetter. The n. twad meaning partly is also found in B. The forms occurring are:

Sing. N. m. tvas, f. tva, n. tvad. A. m. tvam. I. m. tvens, D. m. tvasmai, f. tvasyai, --Pl. m. tvo.

- B. The pronoun avá this occurs only in the G. du. form avés in combination with vam meaning of you two being such (used like an In st tvám thou us such).
- y. The pronoun ama this occurs only once in the AV. (also in the AB.) in the formula ame 'ham asmi this am I.

C. Interrogative Pronoun.

- 113. The interrogative ká who? which? what? used as both substantive and adjective, is inflected exactly like ta, excepting the alternative neuter form ki-m, which instead of the pronominal d has the nominal m (never elsewhere attached to a stem in i). The forms occurring are:
- m. Sing, ká-s. A. ká-m. I. kéna. D. ká-smai. Ab. ká-smād. G. ká-sya. L. ká-smin.—Du. N. káu.— Pl. ké. I. ké-bhis. L. ké-şu.
- f. Sing. N. kā. A. kā-m. I. ká-y-ā. G. ká-syās.—Pl. N. kā-s. A. kā-s. I. kā-su.
- n. Sing. N.A. ká-d and kí-m. -Pl. N. ká and káni.
- a. In derivation the stems ki and ku as well as ke are used; e.g. kf-r-ant how great? kú-ha where? ká-ti how many?

As first member of a compound knd occurs twice: kat-payá greatly wedding, kád-artha having what purpose? kim is similarly used a few times in the later Samhitas and the Brahmanas; e.g. kim-kará servent.

b. ka-ya, an extended form of ka, occurring in the G. only, is found in combination with old: kayasya cid of salvaneous.

[!] From this pronoun are derived the I. and Ab. adverte (with shifted accent) and at home and amid from near.

¹ The N. s. m. is preserved as a petrified form in na-ki-s and ma-ki-s up one, adking.

⁷ The relative frequency of k4-d and kf-m is in the RV, as two to three.

D. Relative Pronoun.

114. The relative pronoun ya who, which, what is declined exactly like ta. The forms occurring are:

m. Sing. N. yá-s. A. yá-m. I. yénā and yéna. D. yá-smai. Ab. yá-smād. G. yá-sya. I. yá-smin.

Du. N. ya, yau. D. ya-bhyam. G. ya-y-os. L. ya-y-os and y-os.

Pl. N. yé. A. yán. I. yé-bhis and yáis. D. yé-bhyas. G. yé-s-ām. L. yé-su.

f. Sing, N. yā. A. yā-m. I. yá-y-ā. G. yá-syās. L. yā-syām.

Du. N. yé. G.L. yá-y-os.

Pl. N. yā-s. A. yā-s. I. yā-bhis. D. yā-bhyas. G. yās-ām. L. yā-su.

n. N.A. Sing. yá-d. Du. yé. Pl. ya, yani.

a. The stem of ya is used to form derivatives; e.g. ya-tha as. It also appears as first member of a compound in ya-dra which like. The neuter yad is also once used thus in the RV.: yat-kama desiring what; and a few times later, as yad-devatyh having what delty (K.), yat-karin doing what (SB.).

b. A form of the relative extended with the diminutive suffix ka, ya-ká ωλο, occurs only in the sing. N. m. ya-ká-s, f. ya-ká, and the pl.

N. m. ys-k6.

E. Reflexive Pronouns.

115. a. The reflexive indeclinable substantive sva-y-am* self is properly used as a N. referring to all three persons. Sometimes, however, its N. nature being forgotten, it is

The Ab., formed according to the nominal declension, yad is used as a conjunction.

3 y-ds for ya-y-os like yuv-ds for yuva-y-os (p. 105, note 3),

² yéna is twice as common in the KV, as yéna, but the Pada text always reads yéna.

^{*} Derived from ava with suffix am and interposed y (like a-y-am from a).

used as an A.; e.g. ayuji svayam dhuri I have yoked myself to the pole; or as agreeing in sense with another case. It occasionally means spontaneously.

b. tanů body is used in the RV. to express self in other cases than the N, and in all numbers. The reflexive pronoun svá and a possessive G, may be added; e.g. yájasva tanvám worship thyself and yájasva tanvám táva svám worship thine own self. The reflexive sense of tanû has disappeared in B.

e. There are one or two instances in the RV, of the incipient use of atman soul in a reflexive sense; o.g. balam dadhana atmani pulling force into himself. The A. atmanam is frequently thus used in the later Samhitas (though never in the RV.) and in B.

c. svå men is a reflexive adjective referring to all three persons and numbers. It is inflected like an ordinary adjective (priya) in the RV. (except the two isolated pronominal forms svásmin and svásyas). The forms occurring are:

m. Sing. N. svás (Lat. suus). A. svám. I. svéna and svónā. D. sváya. Ab. svád. G. svásya. I. své and svásmín (RV.).

Pl. N. svås. A. svån. I. svébhis and sváis. D. svébhyas, G. svånam, L. svésu.

f. Sing, N. svā (Lat. sua). A. svām. I. svāyā. D. svāyai. Ab. svāyās. G. svāsyās (RV.). L. svāyām.

Pl. N. svas, A. svas. I. svabhis, L. svasu.

n. Sing. N.A. svám (Lat. suum). Pl. A. svá (Lat. suu).

a. As first member of compounds ava several times appears in the substantive (as well as the adj.) sense; e.g. ava-yukta self-poked, avayam is similarly used in the Samhitas; e.g. avayam-jā self-born.

F. Possessive Pronouns.

116. Possessive pronouns are mre because the G. of the personal pronoun is generally used to express the sense which they convey.

a. The possessives of the first person are mama-ka and māma-ka my and asmā-ka our. The forms occurring are:

Sing. D. mámakāya. G. mámakasya.

Sing. N. m. māmaká-s. n. māmaká-m. Pl. G. māmakānām.

Sing. N.A. n. asmāka-m. I. asmākena. Pl. N. m. asmākāsas. I. asmāke-bhis.

The n. s. asmākam, by far the commonest of these forms, is used as the G. pl. of the personal pronoun = of us (109).

- b. The possessives of the second person are tāva-kā¹ thy (only D. pl. tāvakébhyas), tvá thy (only I. pl. f. tvá-bhis), and yuşmá-ka your. Of the latter, three forms occur: I. s. m. yuşmákena, pl. f. yuşmákā-bhis, and the N.A. n. yuşmákam used as the G. pl. of the second personal pronoun = of you.
- c. Besides being used reflexively svá is fairly often employed as a simple possessive, generally of the third person (like Lat. suus), his, her, their, but also of the second, thy, your, and of the first, my, our. The inflexion (115 c) is the same in both senses.

G. Pronominal Compounds and Derivatives,

117. With -drś in the RV. and other Samhitas, and with -drksa in the VS. are formed the following pronominal compounds: i-drś, tā-drś, etā-drś such, kī-drś what like; yā-drś what like; i-drksa, etā-drksa such.

Both formed from the G. of the personal pronoun mama. There also occurs once in the BV, the derivative makk-lna my.

[‡] The VS, has once the N. s. asmākā-s our formed like māmakā beside māmaka.

^{*} Formed from the G. tava.

In the Brahmanus (SB.) -drin begins to appear: I-drin, tā-drin, yū-drin.

N. a. m. ki-dfa,

With the very anomalous L. s. yadfamin.

- s. With the suffix -ka, conveying a diminutive or contemptaous meaning, very rarely used derivatives are formed from the pronouns tá, ya, sá, and asáu: ta-ká that little (110.8), yá-ka mán, máich (114b), sa-ká (only N. s. f. sa-ká), asakán N. s. f. that little (VS.).
- b. With the comparative suffix -tara derivatives are formed from t, kā, yā, and with the superlative suffix -taras from the latter two (ep. 120); i-tara other, ka-tará schich of two? ya-tará scho or schich of mony; ka-tamá scho or schich of mony.
- 118. a. With ti derivatives with a numerical sense are formed from ks, ts, and ys: ks-ti hose many? (Lat. quot); ts-ti so many (Lat. toli-dem); ys-ti as many. No inflected forms of these words occur. They appear in the sense of the N.A. pl. only.
- b. With yant expressing the quantitative meaning of much derivatives are formed from i and ki: i-yant so much: n. s. N. iyat, pl. iyanti; f. s. D. iyatyai; ki-yant how much?: sing. N. n. kiyat; f. kiyatī. D. m. kiyate. L. kiyati (for kiyati).
- c. With vant are formed derivatives from personal pronouns with the sense of like, attached to; and from others in the quantitative sense of great; thus två-vant like thee, må-vant like me, yuvå-vant devoted to you two (only D. yuvåvate); yuşmå-vant belonging to you (only L. pl. yuşmåvatsu); etä-vant and tå-vunt so great; ya-vant as great; i-vant so great (s. N. n. ivat. D. m. n. ivate. G. ivatas; pl. A. m. ivatas); ki-vant how fur? (G. s. kivatas).

Indefinite Pronouns.

119. a. The only simple pronoun which has an undoubtedly indefinite sense is sama (unaccented) any, every. The six forms that occur are: m. s. A. samam. D. samasmai. Ab. samasmād. G. samasya. L. samasmin, Pl. N. same.

b. Compound indefinite pronouns are formed by combining the particles ca, cana, or cid with the interrogative ka; thus kaś ca any, any one; kaś cana any one soever, every; kaś cid any, some; any one, some one.

Pronominal Adjectives.

- 120. Several adjectives derived from or allied in meaning to pronouns, follow the pronominal declension (110) altogether or in part.
- a. The adjectives that strictly adhere to the pronominal type of inflexion are anyá other and the derivatives formed with tara and tama from ká and yá. The specifically pronominal cases of the latter that have been met with are: Sing. N. n. katará-d, yatará-d; katamá-d, yatamá-d, D. katamá-smai. G. f. katamá-syās. L. f. yatamá-syām. Pl. N. m. katamé, yatamé, yataré (K.). From itara occur in the Kāṭhaka Saṃhitā m. D. s. itarasmai and N. pl. itare. The forms of anyá that occur are:
- m. Sing. N. anyá-s. A. anyá-m. I. anyána. D. anyásmai. G. anyá-sya. L. anyá-smin.—Pl. N. anyé. A. anyán. I. anyé-bhis and anyáis. D. anyó-bhyas. G. anyé-sām. L. anyé-su.
- f. Sing. N. anyā. A. anyām. I. anyá-y-ā. D. anyá-syai. G. anyá-syās. L. anyá-syām.—Du. N. anyá.—Pl. N. anyā-s. A. anyā-s. I. anyá-bhis. G. anyá-sam. L. anyá-su.
- n. Sing. N. anyá-d.—Du. I. anyá-bhyām.—Pl. N. anyā.
 b. viśva all. sárva schole, éka one are partially pronom-
- inal, differing only in taking m instead of d in the N.A. s. n. Thus:

Sing. D. viśvasmai. Ab. viśvasmād. L. viśvasmin.

¹ The RV, has the nominal forms D. viśvaya, Ab, viśvat, L. viśve, once each.

Pl. N. viśve. G. m. viśveşām. f. viśvāsām; but sing. N. n. viśvam.

Sing. D. m. sárvasmai. f. sárvasyai. Ab. m. sárvasmād. Pl. m. N. sárve. G. sárveṣām. f. sárvāsām; but sing. N. n. sárvam.

Sing, G. f. ékasyās. L. m. ékasmin, Pl. N. m. éke; but sing, N. n. ékam.

- c. More than a dozen other adjectives, having pronominal affinities in form or meaning, occasionally have pronominal case-forms (but always m instead of d in the N.A. s. n.):
- Eight adjectives formed with the comparative suffixes
 -tara and -ra, and the superlative suffix -ma: út-tara higher,
 later:

Sing. Ab. L. úttarasmād and úttarasmin beside úttarād and úttare. L. f. úttarasyām. Pl. N. úttare. G. úttareṣām (K.).

ápa-ra, áva-ra, úpa-ra lomer: sing. L. aparasmin (K.). Pl. N. m. ápare, ávare, úpare beside áparāsas, ávarāsas, úparāsas and úparās.

ava-má lowest: L. s. f. avamásyam.

upa-má highest: L. s. f. upamásyam.

para-má farthest: sing. f. G. paramásyās. L. paramásyām, Pl. m. N. paramó (K.).

madhya-má middlemost: sing. f. L. madhyamásyam.

2. Five other adjectives with a comparative or pronominal sense:

para ulterior: sing. D. m. parasmai. Ab. m. parasmad. L. m. parasmin beside pare. G. f. parasyas. Pl. m. N. pare beside parasas. G. parasam.

půrva prior: sing. D. půrvasmai. Ab. půrvasmad. L. půrvasmin (K.), f. půrvasyam. Pl. N. m. půrve (very common) beside půrvasas (very rare). G. m. půrveşam, f. půrvasam.

The AV, once has eke as L. sing.

noma tother; sing. L. m. nomasmin. Pl. N. m. nome, but G. nama-nam (unseconted).

ava see (116c), otherwise following the nominal declenation, has once sing G. f. avasyas and once L. n. avasmin.

samaná similar, common has once sing. Ab. n. samanásmád beside

3. Four adjectives, numerical in form or meaning, have occasional prenominal endings: prathamá first has the sing. G. f. prathamásyās; tṛtīya third has sing. L. f. tṛtīyasyām; übhaya of both kinds has pl. m. G. übhayeṣām and N. übhaye beside übhayāsas and übhayās; kévala sirelissive has once pl. N. m. kévale.

CHAPTER IV

CONJUGATION

121. Vedic verbs are inflected in two voices, active and middle. The middle forms may be employed in a passive sense, except in the present system, which has a special passive stem inflected with the middle endings. Some verbs are conjugated in both active and middle, e.g. kṛṇó-ti and kṛṇu-té makes; others in one voice only, e.g. ás-tí is; others partly in one, partly in the other; e.g. várta-te turns, but perfect va-várt-a has turned.

a. The Vedic verb has in each tense and mood three numbers, Singular, Dual, and Plural, all in regular use,

¹ Perhaps from nu+tma not this.

² Cp. 107, note 4.

[&]quot; ubhá ball is declined in the Du. only; N.A. m. ubhá, f. ubhó. I. ubhábhyán. G. ubháyos.

with three persons in each (except the imperative in which the first persons are wanting).

- 122. There are five tenses in ordinary use, the present, the imperfect, the perfect, the sorist, and the future. The terms imperfect, perfect, aorist are here used in a purely formal sense, that is, as corresponding in formation to the Greek tenses bearing those names. No Vedic tense has an imperfect meaning, while the perfect sense is generally expressed by the norist.
- a. Besides the indicative there are four moods, the subjunctive, the injunctive, the optative, and the imperative, all of which are formed from the stems of the present, the perfect, and the agrist. The imperfect has no moods; and the only modal form occurring in the future is the unique subjunctive karisyas from kr make.
- c. The subjunctive, very common in the RV, and the AV, is three or four times as frequent as the optative; the latter, comparatively rare in the Samhitas, occurs far oftener than the former in the Brahmanas. Both form stems with a special modal affix.

The subj. adds a to the indicative stem: when the latter diskinguishes a strong and a weak stem, the a is attached to the former, while it coalesces to a with the final of a stams. Thus the pr. subj. stem of dub suit is deb-a, of yuj joss yunaj-a, but of bhû te bhava.

The opt. adds ys or i, which when strong and weak stems are distinguished are attached to the latter. Stems in a take i throughout; others take I in the mid., ya in the act.; thus the pr. opt. stem of bhu is bhave (= bhava-I); of duh and yuj, act. duh-ya, yuōj-ya, mid. duh-l, yuōj-J.

The int. is identical in form with an unaugmented past tense (impf., sor., plup.). It is very common in the EV., but has almost disappeared from the Brahmanas, except when used with the prohibitive particle ma.

The impv. has no model affix, adding its endings direct to the tense stem; a.g. 2. a.pr. vid-dhi keese, pf. mumng-dhi selese, sor. sru-dhi keer. In the 2. 3. du. and 2. pl. not and mid. (anding in tem, tem; āthām, atām; ta; dhvam) it is identical with the inj.

b. Participles, active and middle, are formed from the tense stem of the present, future, sorist, and perfect. There are also passive participles, present, perfect, and future; the first being formed from the passive stem in ya, the other two from the root.

c. There are also gerunds, which are stereotyped cases (chiefly instrumentals) of verbal nouns and having the value of indeclinable active participles with a prevailingly past sense; e. g. gatvi and gatvaya having gonc.

d. There are about a dozen differently formed types of infinitives, which are cases of verbal nouns made directly or with a suffix from the root, and hardly ever connected with a tense stem; e. g. idh-am to kindle; gán-tavái to go.

The Present System.

123. While the perfect, acrist, and future tenses add the endings directly (or after inserting a sibilant) to the root, the present group (that is, the present with its moods and participles, and the imperfect) forms a special stem, which is made in eight different ways by primary verbs.

The Eight Classes.

124. These eight classes are divided into two conjugations. In the first, which comprises the first, fourth, and sixth classes, the present stem ends in a and remains unchanged throughout (like the a declension). The secondary conjugations in a (desideratives, intensives, causatives, denominatives) as well as the future follow this conjugation in their inflexion. The second or graded conjugation is characterized by shift of accent between stem and ending, accompanied by vowel gradation. It comprises the remaining five classes, in which the terminations are added directly to the final of the root or to the (graded) suffixes no or na, and the stem is changeable, being either strong or weak.

A. First Conjugation.

- 125. I. The first or Bhū class adds a to the last letter of the root, which being accented takes Guna of a final vowel (short or long) and of a short medial vowel followed by one consonant; e.g. ji conquer: jáy-a; bhū be: bháv-a; budh awale: bódh-a.
- The sixth or Tud class adds an accented a to the root, which being unaccented has no Guna. Before this a final r
 is changed to ir.
- 3. The fourth or Div class adds ya to the last letter of the root, which is accented; te.g. nah bind: nah-ya; div play: div-ya (cp. 15, 1 c).

B. Second Conjugation.

126. The strong forms are:

- 1. The singular present and imperfect active;
- 2. The whole subjunctive :
- 3. The third person singular imperative active.

In these forms the vowel of the root or of the affix, being accented, is strengthened; while in the weak forms it is reduced because the terminations are accented.

- s. In the ninth class the accented form of the affir is na, the unaccented ni or n; in the seventh they are respectively na and n.
- 127. I. The second or root class adds the terminations directly to the root (in the subjunctive and optative with the intervening modal suffix). The radical vowel in the strong forms is accented and takes Guna if possible (125, 1);

* Except in the augmented (128 c) imperfect singular because the augment is invariably accented.

The weak form in some instances assumed by the root points to the ye having originally been accented (op. 133 B 1).

e. g. from i go: sing. 1. é-mi, é-si, é-ti; dvis hate: dvés-mi, dvék-si, dvés-ți.

- 2. The third or reduplicating class adds the terminations directly to the reduplicated root, which in the strong forms takes Guna if possible. Contrary to analogy, the accent is not, in the majority of verbs belonging to this class, on the root in the strong forms, but on the reduplicative syllable (which is also accented in the 3. pl. act. and mid.). Thus hu sacrifice: Sing. 1. ju-hó-mi, pl. 1. ju-hu-más; bhr beur: Sing. 1. bi-bhar-mi, pl. 1. bibhr-más, 3. bí-bhr-ati.
- 3. The seventh or inflxing nasal class adds the terminations directly to the final consonant, before which na is inserted in the strong and n in the weak forms; e.g. yuj join; yu-na-j-mi, yufij-mas.
- 4. The fifth or nu class adds in the strong forms the accented syllable no, which in the weak forms is reduced to nu; e.g. kr make: kr-no-mi, krn-mas.
- a, Four roots anding in a have the appearance of being formed with a suffix u, but this is probably due to the an of the root being reduced to the somant masal; thus from tan stretch ta-nu (for tu-nu). In the tenth Mandala of the RV, the anomalous weak stem kurn appearathree times (beside the normal kr-nu) and the strong stem karo in the AV. These stems gave rise to the eighth or u class of Sanskrit grammar.
- 5. The ninth or nā class adds to the root in the strong forms the accented syllable nā, which in the weak forms is reduced to nī before consonants and n before vowels. The root shows a tendency to be weakened. Thus grabh scize: gṛbh-ṇā-mi, pl. 1. gṛbh-ṇī-māsi and gṛbh-ṇī-mās, S. gṛbh-ṇ-anti.

^{&#}x27; It is doubtless as a result of this secontuation that these vertes lose the n of the endings in these two forms: bibhr-ati, bibhr-ate,

² The intensives conjugated in the active (172) follow this class.

The a is dropped before the m of the I, pl, and set, and mid.

The Augment.

128. The imperfect, pluperfect, acrist, and conditional generally prefix to the stem the accented syllable a which gives to those forms the sense of past time.

a. This augment sometimes appears lengthened before the n, y, r, v of seven or eight roots: aor. û-nat (naś attain); impf. â-yunak, aor. â-yukta, â-yukṣātām (yuj join); impf. â-riṇak and aor. â-raik (ríc lease); aor. â-var (vṛ cover); impf. â-vṛṇi (vṛ choose); impf. â-vṛṇak (vṛj turn), impf. â-vidhyat (vyadh wound).

b. The augment contracts with the initial vowels i, u, r to the Vrddhi vowels ai, au, ār; e.g. áichat impf. of iş wish; áunat impf. of ud wet; ār-ta (Gk. δρ-το) 3, s. aor. mid. of r go.

c. The augment is very often dropped: this is doubtless a survival from the time when it was an independent particle that could be dispensed with if the past sense was clear from the context. In the RV, the unaugmented forms of past tenses are much more than half as numerous as the augmented ones. In sense the forms that drop the augment are either indicative or injunctive, these being about equal in number in the RV. About one-third of the injunctives in the RV, are used with the prohibitive particle $m\hat{a}$ (Gk, $\mu\hat{\eta}$). In the AV, nearly all the unaugmented forms are injunctives, of which four-tifths are used with $m\hat{a}$.

Reduplication.

129. Five verbal formations take reduplication: the present stem of the third conjugational class, the perfect (with the pluperfect), one kind of sorist, the desiderative, and the intensive. Each of these has certain peculiarities, which must be treated separately under the special rules of reduplication (180, 185, 149, 170, 173). Common to all are the following:

General Rules of Reduplication.

- The first syllable of a root (i.e. that portion of it which ends with a vowel)¹ is reduplicated; e.g. budh perceive: bu-budh.
- Aspirated letters are represented by the corresponding unaspirated; e.g. bhī fear: bi-bhī; dhā put: da-dhā.
- 3. Gutturals are represented by the corresponding palatals,³
 h by j; e, g, gam go: ja-gam; khan dig: ca-khan; han smite; ja-ghan.
- If the root begins with more than one consonant, the first only is reduplicated; e.g. kram stride: ca-kram.
- 5. If a root begins with a sibilant followed by a hard consonant, the latter is reduplicated; e.g. sthu stand: ta-sthu; skand leap: ca-skand. But svaj embrucc: sa-svaj (v is soft); smi smile: si-smi (m is soft).
- 6. If the radical vowel, whether final or medial, is long, it is shortened in the reduplicative syllable; e.g. dā give: da-dā; rādh succeed: ra-rādh.

Special Rule of Reduplication for the Third Class.

130. r and r are represented in reduplication by i; e.g. bhr bear; bi-bhar-ti; pr fill; pi-par-ti. The root vrt turn is the only exception; va-vart(t)-i.

a. Thirteen roots also reduplicate & with i, while nine do so with a.

¹ This is not always the case in the reduplication of intensives (178 b).

^{*} There are some exceptions to this rule in the reduplication of intensives (178, 3).

^{*} This rule does not apply to intensives (178), nor for the most part to the reduplicated agrist (149, 2), and in the reduplicated perfect it is subject to numerous exceptions (159, 9).

Three of these, på drink, atha send, han ship, have permanently gone over to the a conjugation, while ghra send is beginning to do se-

Terminations.

131. The following table gives the terminations, which are on the whole the same for all verbs, of the present system. The chief difference is in the optative which is characterized by e¹ in the first, and y\(\frac{1}{2}\) and i² in the second conjugation. The present indicative has the primary (mi, si, ti, &c.), and the imperfect, the optative, and (with some modifications) the imperative have the secondary terminations (m, s, t, &c.), while the subjunctive fluctuates between the two. Of the other tenses the future takes the primary, and the pluperfect and the acrist, with the benedictive and the conditional, take the secondary terminations; while the perfect has in the active (with many variations) the secondary, and in the middle the primary endings.

The following distinctions between the two conjugations should be noted. In the first or a conjugation (as in the a declension) the accent is never on the terminations, but always on the same syllable of the stem (the root in the first and fourth, the affix in the sixth class), which therefore remains unchanged. On the other hand, in the second conjugation (as in the declension of changeable stems) the accent falls on the strong stem, which is reduced in the weak forms by the shifting of the accent to the endings. In the second conjugation therefore the endings are accented except in the strong forms (126). The same applies to the unaugmented imperfect (128).

I That is, I coalescing with the final a of the stem; e.g. bhav-a-bhava-I.

¹ That is, the modal affix shows vowel gradation (50).

ACTIVE.

PRESENT. IM	PERFECT.	OPTA	TIVE.	SUB2.	1MPV.
		1st conj.	2nd conj.		
1. mi	(a)-m4	īyam "	yam	āni, ā	-
2. si	8	is	yas	a-si, a-s	-, tāt"
S. ti	t	ît	yat	a-ti, a-t	tu
I. vas i	va i	īva	yāva	ā-va	_
2, thas	tam	Itam	yātam	a-thas	tam
S. tas	tám	itām	yátám	a-tas	tām.
I, masi, mas	ma 1	īma	yama	ã-ma	-
2. tha, thana	ta, tana	īta	yata	a-tha	ta, tana 10
3. (a)-nti 4	(a)-n, ur	iyur	yúr	a-n	(a)-ntu *

³ The final a of the stem in the first conjugation is lengthened before m or v: bhávā-mi, bhávā-vas.

16 Only two axamples occur in the a conjugation; bhaja-tana and

In the RV, mast is more than five times as common as mas, but in the AV, mas is rather commoner than mast.

The only example of the ending thans in the a conjugation is

^{*} Redipplicated verbs and others treated as such drop the n in the S. pl. ind. pr. and impv. act. In the whole second conj. the n is dropped in the S. pl. pres. impf. impv. mid.

m in the first (4-bhava-m), am in the second (4-dveg-am).
 There are no examples of this ending in the a conjugation.

⁷ The ending uv is taken by nearly all the verbs of the reduplicating class and by several of the root class.

These endings coalesce with the final a of the stem to eram, es, at, &c.

Verbs of the a conjugation have normally no ending in the 2. a impv.; but they not infrequently add tat, which occurs in B. also. In the graded conjugation dhi, hi, tat are added to the weak stem, and and in some verbs of the ninth class: e.g. ad-dhi, anudhi; anu-hi, punl-hi; as-ana; vit-tat, knnu-sat.

MIDDLE.

3	PRESENT.	IMPF,	OPTATIVE.	SUBJUNCTIVE.	IMPERATIVE.
1.	0	£.1	īya t	ai	***
2.	80	thās	ī-thās	a-se, a-sai	sva
. 8.	te	ta	ī-ta	a-te, a-tai	tām ļ ām
1.	yahe 1	vahi 1	i-vahi	ā-vahai	-
2	othe * (1), nthe (2)	ethām (1), āthām (2)	í-y-āthām	sithe	othām (1) āthām (2)
8.	ete 3 (1), åte (2)	etām (1), ātām (2)	î-y-ātām	nite	etām 1 (1) ātām (2)
1.	maho!	mahi ¹	i-mahi	ā-mahai) ā-mahe	2
2	dhve	dhyam	i-dhvam	a-dhvai	dhyam
3.	nte (1), áte (2)	nta (1), ata (2)	1-r-an	n-ntai *)	ntām (1) atām (2)

The final a of the first conjugation is lengthened before m and v.

² This i combines with the final a of the first conjugation to e:

In these forms e takes the place of the final a of the a conjugation.

^{*} This modal i combines with the final a of the first conjugation to e; bhaveys, &c.

[&]quot; The BV. has a-so only, the AV. and the Brahmanas a-sai only.

[&]quot;The form a-ts is almost exclusively used in the RV., while a-tai is the prevailing one in the AV., and the only one later.

The ending a-ntai occurs in B. only.

^{*} The form in s-nts in the a conjugation, where it is very common, e.g. bhava-nta, is an injunctive; but in the graded conjugation a subj., e.g. krnav-s-nts (inj. krnvata).

Paradigms.

132. Since the three classes of the first conjugation, as well as all the secondary verbs the stems of which end in a, are inflected exactly alike,' one paradigm will suffice for all of them. The injunctive is not given here because its forms are identical with the unaugmented imperfect. Forms of which no examples are found in the Samhitas are added in square brackets.

All other conjugational atoms ending in a, the passive (154), the a future (151), the a (141a), the sa (147), and the reduplicated (149) aor, are similarly inflected.

133. A. First or Bhū Class. I. The radical vowel is lengthened in guh hide and in kram stride (in the act, only); gūha, krāma-ti (but mid. krāma-te); ūh consider takes Guṇa; ōh-a; kṛp-lament does not take Guṇa; kṛp-a.*

 gam go, yam restrain, yu separate form their present stems with cha (Gk. σκ): gá-cha (Gk. βά-σκω), yá-cha, yú-cha.

3. a. The four roots pā drink, sthā stand, sac accompany, sad sit form present stems that originally belonged to the reduplicating class: piba (Lat. bibo); tiṣṭha (ἴστη-μι. Lat. sislo); sắśca '(ἴστ sắ-s(a)c-a); sīda (for si-s(a)d-a; Lat. sido).

b. Four stems are transfers from the fifth or nu class, being either used beside or having entirely supersoded the simpler original stems: i-nv-a-ti (from i send) beside i-no-ti; ji-nv-a-ti (from ji quicken) beside ji-no-si; hi-nv-a-ti (from hi impel) beside hi-no-ti; pi-nv-a fatten, doubtless originally pi-nu (\sqrt{pi}).

4. dams bite and sañj hung lose their nasal; das-a, saj-a.

5. The ending tat (besides being regularly used in the 2. s. impv. by twelve verbs) is exceptionally used for the 3. s. in gacha-tat and smara-tat. Only one example occurs, in this class, of the 2. pl. impv. act. ending tana: bhaja-tana; and one of dhva (for dhvam) in the 2. pl. mid.: yaja-dhva.

A Instead of taking Guna.

But the reside remains unchanged (125, 1).

² Against 125, 1.

A reminiscence of the reduplicative origin of this atem is the lose of the meal in the 3, pl. pres, asse-sati and 3, pl. inj. mid. sase-sta.

B. Fourth or Ya Class. 1. The radical syllable is reduced in seven verbs: spaś see loses its initial: páś-yu; vyadh pierce takes Samprasāraņa: vidh-ya; ā is shortened in dhā suck: dhā-ya; mā exchange: má-ya; vā seesse: vá-ya; vyā encelope: vyá-ya; hvā call: hvá-ya.

Final \(\tilde{r}\) sometimes becomes both ir and \(\tilde{u}\)r: \(\tilde{f}\)r waste away: \(\tilde{u}\)r-ya and \(\tilde{t}\)r-ya (AV.); \(\tilde{t}\)r cross: \(\tilde{u}\)r-ya and \(\tilde{t}\)r-ya; \(\tilde{p}\)r \(\tilde{t}\)ll becomes pur-ya only (because of its initial labial).

3. śram he weary lengthens its vowel: śram-ya; in B. tam faint and mad be exhibited do the same: tam-ya, mad-ya.

C. Sixth Class. 1. The radical vowel is nasalized in eight verbs; krt cut: krnt-á; trp be pleased: trmp-á; piś adorn: pimá-á; mue release: muñe-á; lip smear: limp-á; lup breuk: lump-á; vid find: vind-á; sie sprinkle: siñc-á. Three other roots, tud thrust, drh make firm, áubh shine have occasional nasalized forms.

2. Four roots form their present stem with the suffix cha (ep. A 2); is wish: 1-chá; r go: r-chá; praš ask: pr-chá; vas shine; u-chá. The root vraše cut, which seems to be formed with c, takes Samprasarana: vrše-á.

 Three roots in r, kr scatter, gr swallow, tr cross, form the present stems kir-á, gir-á, tir-á (beside tár-a).

a. Beside the normal use of the imperative suffix tat for the 2. a. in mrds-tat, viss-tat, vrhs-tat, suvs-tat, it also appears for the 3. a in viss-tat.

134. A. Second or Root Class.

1. The root is irregularly strengthened in the following verbs:

a, kṣṇu whet, yu unite, nu and stu praise take Vṛddhi instead of Guṇa in the strong forms before terminations

With Samprasirana and loss of \$. Op. Lat. preser and pa(rc)=00, and Old German fraces 'ask' and foreson (foreches).

⁷ Cp. -vras-ka cutting, past participle vrx-nd cut, and vrk-a welf.

beginning with consonants; 1 e.g. stáu-mi, á-stau-t, but á-stav-am.

- b. mrj wipe takes Vrddhi in the strong forms: marj-mi, mars-ți, but mrj-mas, mrj-anti.
- c. śī lie mid. takes Guṇa and accents the radical syllable throughout its weak forms: e.g. s. 1. 3. śáy-e, 2. ść-se (κεί-σαι). It has the additional irregularity of inserting r before the endings in the 3. pl. pr., impv., impf. : ść-r-ate, ść-r-atām, ā-śe-r-an.
- a. i go, brû speak, stu praise, han skep before the ending of the 2. pl. impv. act. have the alternative forms e-ta and e-tana, bravi-tana, sto-ta, han-tana. Brû has the same irregularity in the 2. pl. impf. abravi-ta and abravi-tana.
- 2. The root is irregularly weakened in the following verbs:
- vaš desire takes Samprasāraņa in the weak forms:
 pl. uš-mási, part. uš-ānā, but 1. s. váš-mi.
- b. as be drops its initial a in the optative and all the weak forms of the pr. and impv.; e.g. opt. s-yat would be; pr. s-mas we are, s-anti (Lat. sunt) they are; impv. du. 2. s-tam, pl. 2. s-ta, 3. s-antu. The 2. s. impv. preserves the vowel (in an altered form) in c-dhi (for az-dhi, Av. zdi). In the impf. it inserts I before the endings of the 2. 3. s.: as-I-s, as-I-t (beside as = as-t).
- c. han slay in weak forms loses its n before terminations beginning with consonants (except m, y, v), as ha-thâ, but hân-ti. In the 3, pl. pr., impv., impf., and part., the a is syncopated and h reverts to the original guttural gh: ghn-anti, ghn-antu, a-ghn-an; ghn-ant. The 2 s. impv. is ja-hi (for jha-hi), with palatalized initial instead of gha-hi.

¹ In B. ru cry, au impel, sku tear, sun dient have the same peculiarity : rau-ti, san-ti, skan-ti, smu-ti.

- 3. A vowel or semivowel is irregularly inserted in the following verbs:
- a. The roots an breathe, rud weep, vam vomit, avas blow, svap sleep insert i before all terminations beginning with a consonant, except in the 2.3. s. impf., where they insert i; e.g. an-i-ti, an-i-t; a-vam-i-t; svas-i-ti.
- b. The roots id praise and is rule add i in some forms of the 2. a and pl. mid.; id-i-sva; is-i-se (beside ik-se), isi-dhye. Occasional forms (2. s. impv.) with connecting i from other roots also occur; jan-i-sva be born, vas-i-sva clothe, snath-i-hi pierce, stan-i-hi thunder.
- c. The root brū speak inserts i in the strong forms before terminations beginning with consonants: brav-i-mi, a-brav-i-t; am injure inserts i before consonants; thus am-i-ti, am-i-sva, ām-i-t (TS.).
 - 4. With regard to the endings:
- a. The root śās order loses the n in the 3. pl. act. and mid., and in the part. : śās-ate, śās-atu, śās-at.
- b. The root duh milk is very anomalous in its endings. The irregular forms are the following: act, impf. 3. s. á-duh-a-t beside á-dhok, 3. pl. á-duh-ran beside á-duh-an and duh-úr; opt. 3. s. duh-īyát (for duh-yát), 3. pl. duh-ī-yán (for duh-yúr). Mid. pr. ind. 3. pl. duh-ré and duh-rate beside the regular duh-até; impv. 3. s. duh-ám, 3. pl. duh-rám and duh-rátām; part. dugh-āna.
- c. Roots ending in ā take ur instead of an in the 3. pl. impf. act.; e.g. pā protect; á-p-ur. A few roots ending in consonants show the same irregularity; e.g. tvis be stirred; á-tvis-ur.
- a. The verbs is rate, duh wills, vid flad, si he frequently, and nit observe, bru speak rarely, take a instead of to in the 8. a. pr. mid. office, duh-6, vid-6, say-e; cit-6, bruy-6.
- B. In the AV, and B, subj. forms with a instead of a are not uncommon; e.g. áy-ā-a, ās-ā-t, bráv-ā-thas, hān-ā-tha, ād-ā-n.

But with Irregular accent, as also rib-ate they lick.

^{*} In the AV, the S. s. impv. mid, is similarly formed in say-am.

This irregularity occurs in B. also.

[.] In B. subj. forms with primary endings are very rare.

- B. Third or Reduplicating Class.
- Roots ending in a drop the radical vowel before terminations beginning with vowels; e.g. ma measure:
 s. mim-e, 3. pl. mim-ate.
- a. The a of ma measure, ma bellow, ra give, sa sharpen, ha go away is in weak forms usually changed to i before consonants (op. 5 c); mimi-te; rari-thas; 'sisi-masi; jihi-te.
- b. dā give, dhā place, the two commonest verbs in this class, use dad and dadh as their stems in all weak forms; dåd-mahe, dadh-mäsi. When the aspiration of dadh is lost before t, th, s it is thrown back on the initial; dhat-te, dhat-thá, dhat-svá. The 2. s. impv. act. is de-hi (for daz-dhi) beside dad-dhi and dat-tát; and dhe-hi (for dhaz-dhi) beside dhat-tát.
- The root vyac takes Samprasaraņa, e.g. 3. du. pr. vivik-tas; hvar be crooked makes some forms with Samprasaraņa and then reduplicates with u: e.g. ju-hūr-thās, 2. s. inj. mid.
- 3. bhas cher, sac accompany, has laugh syncopate the radical vowel in weak forms; thus ba-ps-ati 3 pl. ind. pr. (but ba-bhas-a-t 3. s. subj.); sá-śc-ati 3. pl. ind. pr., sá-śc-ata 3. pl. inj.; já-kṣ-at (for ja-gh(a)s-at) pr. part.
- a. The roots y yo, då give, thu pad, pr coss, yu separate, så sharpen, hu sagrifir have several forms with a strong yowel in the 2. Impv. act. s. yn-yo-dhi, ši-šā-dhi (beside ši-šī-hi); du. yu-yō-tam (beside yu-yu-tām); pl. i-y-ar-ta, dā-dā-ta and dā-dā-tana, dā-dhā-ta and dā-dhā-tana, pi-par-tana, yu-yō-ta and yu-yō-tana, ju-hō-ta and ju-hō-tana, dā, dhā, hā leses, have similar strong forms in the 2, pl. impl.: ā-da-dā-ta, ā-da-dhā-ta, ā-jahā-tana.
- B. There are numerous transfers from this to other classes. The roots på driek, atha sand, han a land form such stems according to the a conjugation exclusively, piba, tistha, jighm (op. 133 A. 3 a); while ghrd smell, bhas then, må bellete, rå give, soo accordingly contained the a stems lighra, bapsa, mima, rans, sasses. The roots da give and tha put also make some forms from their weak stems according to the

But 2. s. impy, and rara-sva AV.).

a conjugation, as 3, s. pr. mid. dad-a-re, 3, pl. net. dadn-a-ntf, 3, pl. impv. dadh-a-ntu. The former, dad, has even an inciplent tendency to become a root; thus it forms the past part, pass, dat-ta gives.

- C. Fifth or Nu Class. 1. The u of the suffix is dropped before the m of the 1. pl. ind. act. and mid., as kṛṇ-mas, kṛṇ-mahe.
- 2. When nu is preceded by a consonant its u becomes uv before vowel endings; e.g. 3. pl. pr. as-nuv-anti (but su-nv-anti).
- śru hear forms (by dissimilation) the stem śr-nu, and vr cover (with interchange of vowel and semivowel) nr-nu beside the regular vr-nu.
- 4. Beside the regular and very frequent present stem kṛ-ṇu (from kṛ make) there begins to appear in the tenth Maṇdala of the RV, the very anomalous kuru. The strong form of this stem, karó, which has the further anomaly of Guna in the root, first appears in the AV.
- a. The four roots ending in n, tan street, man think, van win, san goin, have the appearance of forming their stem with the suffix n, as tan-u. These (with three later roots) form a separate (eighth) class according to the Hindu grammarians. But the a of these present stems in reality probably represents the senant nasal, tp-nu. This group was joined by kur-u, the late and anomalous present stem of kr make (op. C 4).
- 8. Five stems of this class, i-nu, p-nu, pi-nu, pi-nu, hi-nu, have some to be used frequently as secondary roots forming present stems according to the a conjugation : inv-a, fuv-a, jinv-a, pinv-a, hinv-a.
- y. In the 3. pl. pr. mid. six verbs of this class take the ending re with connecting vowel i: inv-l-ré, rpv-l-ré, pinv-l-ré, érpv-l-ré, sunv-l-ré, hinv-i-ré.

TRUE

After the proposition part around this stem prefixes an unoriginal s: part-s-kruy-anti they where.

³ Twice in the 2, z, impv. kuru and once in the I. pl, pr, ind, kur-max.

But the forms made from krun are still six times as common in the AV, as those from kare, kurn, which are the only stems used in B.

^{*} Like duh-re in the root class.

- 3. In the impv. the 2, a act, has the ending hi, as sruu-hi, three times as often in the RV, as the form without ending, as sruu; in the AV, it occurs only about one-sixth as often as the latter; in B. It has almost disappeared. In the RV, the ending thi also occurs in sruu-dhf. The ending this occurs in kruu-tht, himu-tht, kuru-tht. In the 2, du, are found the strong forms kruo-tam, himo-tam; and in the 2 pl. kruo-ta and kruo-tana, sruo-ta and sruo-tana, auno-ta and suno-tana, himo-ta and himo-tana; tano-ta and karo-ta.
- D. Infixing Nasal Class. I. anj ancint, bhanj break, hims injure drop their nasal before inserting na: as a-ná-k-ti, bha-ná-k-ti, hi-ná-s-ti.
- 2. trh crush infixes no in the strong forms; e.g. tr-no-dhi (60 c).
- E. Ninth or Na Class. 1. The three roots ji overyower, jū hasten, pū purify shorten their vowel before the affix: ji-nā-mi, ju-nā-si, pu-nā-ti.
- grabh seise and its later form grah take Samprasarana;
 grbh-na-mi, grh-na-mi (AV.).
- 3. jñā know and the four roots which in forms outside the present system appear with a nasal, bandh bind, manth slake, skambh make form, stambh prop, drop their nasal: jā-nā-ti, badh-nā-ti, math-nā-ti, skabh-nā-ti, stabh-nā-ti.
- 4. Four roots ending in consonants, as cat, grah selse, bandh bind, stambh prop, have the peculiar ending ana in the 2. s. impv. act.: as-ana, grh-ana, badh-ana, stabh-ana.
- a pr //// and my crees make, boside the regular stems prof and mruf, the transfer stems, according to the a conjugation, pros and mruf, from which several forms occur.

The Perfect Tense.

135. This tense is formed by reduplication. Like the present, it has, besides an indicative, the subjunctive, injunctive, optative, and imperative moods, as well as participles, and an augmented form, the pluperfect. It is very common, being formed by nearly 300 verbs in the Samhitas.

Special Rules of Reduplication.

- r and r (= ar) and 1 (= al) always reduplicate with a (ep. 139, 9);
 e.g. kr do: ca-kr;
 tr̄ cross: ta-tr;
 klp be adapted: ca-klp;
 r go: ar (= a-ar).
- 2. Initial a or a becomes a; e.g. an breathe: an; ap obtain: ap. The long vowels i and a remain unchanged (=i-i and u-u); e.g. is move: 1. s. is-e; an consider: 3. s. ah-e.
- 3. Roots beginning with i and u contract i+i to i and u+u to u except in the sing, act., where the reduplicative syllable is separated from the strong radical syllable by its own semivowel: e.g. i 90: 2. s. i-y-é-tha; uo be pleased: 2. s. mid. uc-i-sé, but 3. s. act. u-v-óc-a.
- 4. Roots containing ya or va and liable to Samprasarana in other forms (such as the past part. pass.) reduplicate with i and u respectively. There are four such with ya: tyaj forsake, yaj sacrifice, vyac extend, syand more on: ti-tyaj, i-yaj, vi-vyac, si-syand; and five with va: vac speak, vad speak, vap strew, vah carry, svap steep: u-vac, u-vad, u-vap, u-vah, su-svap. On the other hand the three roots yam stretch, van win, vas wear have the full reduplication ya or va throughout: ya-yam, va-van, va-vas.
- 136. The singular perfect active is strong (like the sing. pr. and impf. act.), the root being accented; the remaining forms are weak, the terminations being accented. The endings are the following:

		ACTIVE.			Mionie.	
	SING.	DUAL	Phus	sing.	DUAL	PLUE.
1. 2. 3.	a tha a	[vá] áthur átur	má á úr	ố số ổ	[value] athe ate	máho dhvé ré

was has two forms with the full reduplication : 3, x, not, va-vac-a and 2, z, mid, va-vak-se.

- a. Terminations beginning with initial consenants are as a rule added directly to the stem; make is invariably so added. The endings that, ma, se, re are nearly always added direct to stems ending in vowels; thus from dā give; dadā-tha; ji conquer: ji-gé-tha; nī lead: niné-tha; su press: suṣu-mā; hū call: juhū-ré; kṛ make: cakār-tha, cakṛ-mā, cakṛ-ṣē, but cakr-i-ró. The same endings tha, ma, se, re are added directly to roots ending in consonants, if the final syllable of the stem is presodically short, but with connecting i² if it is long; a.g. tatān-tha; jagan-mā, jagph-mā, yuyuj-mā; vivit-sē; cā-kļp-rē, tatas-rē, yuyuj-rē, vivid-rē; but uvóc-i-tha, ūc-i-mā, papt-i-mā; ij-i-rē.
 - b. Before terminations beginning with vowels (cp. 187, 1a)
- i preceded by one consonant become y, if preceded by more than one, iy; e.g. bhi fear: bibhy-atur; śri msort: śiśriy-ó.

 ñ ordinarily become uv ; e.g. yu join : yuyuv-é ; áru hear : śuśruv-é ; śū swell : śūśuv-é.

3. r becomes r, r becomes ir; e.g. kr make; cakr-é, cakr-é; tr cross; titir-úr; str strew; tistir-é.

The Strong Stem.

 Short vowels followed by a single consonant take Guna throughout the singular active; e.g. dis point: di-dés-a; ue be cont: uv-ôc-a; kṛt cut: ca-kart-a; but jinv quicken: li-jinv-athur.

¹ Roots in a always add re with connecting i.

The final zadical vawel a in weak forms is reduced to i, e.g. from the put dadhi-dhyo. This reduced vowel in the very common vertex da and the was probably the starting-point for the use of i as a connecting yowel in other verbs.

² This is due to the rhythmic rule that the stem may not have two prosodically short vowels in successive syllables. Cp. p. 155, note 2.

^{*} But hip cuit : juhy-e; bhit !- : babhur-a; su bring forth: va-nuv-a.

2. Final vowels take Vrddhi in the 5. s.; e.g. nī loud: ni-nāy-a; šru hear: šu-šrāv-a; kṛ make; on-kār-a.

 Medial a followed by a single consonant takes Vrddhi in the 3, z.; e.g. han strike: ja-ghan-a, but take fashion

ta-tákş-a.

4. Roots ending in ā take the anomalous ending au in the 1. and 3. s. act.; e.g. dhā put: da-dháu. The only exception is the root prā fill, which once forms the 3. s. pa-prā beside the regular pa-prāu.

The Weak Stem.

137. 1. In roots containing the vowels i, v, r the radical syllable remains unchanged except by Sandhi; e.g. yuj join: yu-yuj-mā; vid find: vi-vid-é; kṛ make: ca-kṛ-mā.

a. Before terminations beginning with vowels, i and r, if preceded by one consonant become y and r, if by more than one, iy and ar; while û and r regularly become uv and ir; e.g. ji conquer: ji-gy-ûr; bhi fear: bi-bhy-ûr; kr make: cakr-ûr; śri resort: śi-śriy-é; yu join: yu-yuv-é; śru hear: śu-śruv-é; śū swell: śŭ-śuy-é; tr cross: ti-tir-ûr; str strese: ti-stir-é.

2. In roots containing a medial a or final a the radical

syllable is weakened.

a. About a dozen roots in which a is preceded and followed by a single consonant (e. g. pat) and which reduplicate the initial consonant unchanged (this excludes roots beginning with aspirates, gutturals, and for the most part v) contract the two syllables to one containing the diphthong e (op. Lat. fac.io, foc.i). They are the following:

 3 This wowel spread from contracted forms like as-zd (Av. lezs) weak perfect stem of and sit (az becoming e; sp. 134, 2 b and 133 A 1).

The 1. sing, never takes Vrddhi in the RV, and AV. In an Upanisad and a Sutra cakera occurs as 1. sing, and in a Sutra jigsya (vii) also.

tap heat, dabh harm, nam bend, pac cook, pat fly, yat stretch, yam extend, rabh grasp, labh take, sak be able, sap curse, sap serre. Examples are: pat: pet-atur; sak: sek-ur.

The two roots tan stretch and sac follow join this class in the AV.

b. Four roots with medial a but initial guttural, syncopate their vowel: khan dig: ca-khn; gam go: ja-gm; ghas eat; ja-ky; han smile: ja-ghn.

Six other roots, though conforming to the conditions described above (2 a), syncopate the a instead of contracting : jan beget: ja-jn; tan stretch: ta-tn; pan admire: pa-pn; man think: ma-mn; van ein: va-vn; sac follow: sa-śc.

- a. pat My both contracts and syncopates in the RV. : pot and pa-pt.
- c. Eight roots containing the syllables ya, va, ra take Samprasarana: yaj sacrifice, vac and vad speak, vap stree, vas deell, vah carry, svap sleep, grabh and grah seize; e.g. su-sup, ja-grbh and ja-grh. In the first six, as they reduplicate with i or u, the result is a contraction to i and û. Thus yaj: ij (= i-ij); vac: ûc (= u-uc).
- d. A few roots with medial a and penultimate masal, drop the latter: krand cry out: ca-krad; tams shake; ta-tas; skambh prop: ca-skabh (AV.): stambh prop: ta-stabh.
- e. Roots ending in a reduce it to i before consonante and drop it before vowels; e.g. dhā place: dadhi-mā; dadh-úr.

* From raj occurs one form according to the contracting class (2 o):

In the wk, perfect of yat and yam the contraction is based on the combination of the full reduplicative syllable and the radical syllable with Samprasirans: yet - ya-is, yem - ya-im.

Paradigms of the Reduplicated Perfect.

138. 1. tud strike: strong stem tu-tód; weak tu-tud.

	SINGULAR.	ACTIVA.	PLUBAL

1. 2. 3.	ja-gám-a	ja-gan-vá	ja-gan-má
	ja-gán-tha	ja-gm-áthur	ja-gm-ú
	ja-gáma	ja-gm-átur	ja-gm-úr

138-1391

MIDDLE

1.	ja-gm-é	ja-gan-vahe	ja-gan-máhe
2,	ja-gm-i-só	ja-gm-åthe	a-gm-i-dhve
8.	ja-gm-ė	ja-gm-āto	ja-gm-i-rô

8. vac speuk: strong stem u-vác, u-vác; weak üc.

Acriva.

	u-vác-a	üc-i-va	űc-i-má
2	u-vak-tha	ūo-áthur	űc-á
3,	u-vao-a	no-atur	üc-ür

MIDDLE.

1.	ûc-é	ne-i-vahe	uc-i-máhe)
2,	ûc-i-şô	üc-åthe	ūc-i-dhvé
3.	üc-é	[uc-ate]	űc-í-ró

Irregularities.

- 139. I. bhaj share, though beginning with an aspirate, follows the analogy of the contracting perfects with e (137, 2 a); e.g. ba-bhāj-a: bhej-ē, bandh bind, after dropping its nasal, does the same; e.g. ba-bāndh-a: bedh-ūr (AV.).
- 2. yam quide, van win, vas cear have the full reduplication throughout (135, 4); yam takes Samprasāraņa of the radical syllable: ya-yāma: yem-ē (= ya-im-e); van syncopates its a: va-vān-a, va-vn-ē; vas retains its radical syllable unweakened throughout: vā-vas-ē (cp. 139, 0).

- vid know forms an unreduplicated perfect with present meaning: 1. véd-a l'know (οlôa, German weiss), 2. vét-tha (οlô-θα; weiss-l), 8. véd-a (οlôε; weiss); pl. 1. vid-má (lô-μεν; wissen), 2. vid-á, 3. vid-úr.
- a. A few isolated unreduplicated forms from about six other roots occur: taky-šthur; skumbh-šthur and skumbh-ür; est-štur; yamštur and yam-ūr; nind-i-mā; arh-i-rē.
- 4. The initial of ci gather, ci observe, cit pervice, ji conquer, han kill reverts to the original guttural in the radical syllable: 3. s. act. ci-kāy-a, ci-kēt-a, ji-gāy-a, ja-ghān-a. bhr tear almost invariably reduplicates with j in the RV.: ja-bhār-tha, ja-bhāra, ja-bhr-dr; ja-bhr-ē, ja-bhr-i-ṣē, ja-bhr-t-rē; but only once with b: ba-bhr-ē.
- 5. ah say is defective, forming only the 3. a and pl.: āh-a and āh-ūr. The two additional forms 2. a āt-tha, 3. du. āh-ātur occur in the Brāhmaņas.
- 6. Five roots beginning with a prosodically long a reduplicate with an: ams attain, anj anoint, and thrive, are praise, arh deserve. Only the first two make several forms. Here the radical masal is repeated with the initial vowel: 3. ān-ams-a (Gk. ην εγκ a); pl. 1. ān-ās-mā, 2. ān-as-ā, 3. ān-as-ūr; mid. s. 3. ān-as-ē; s. 3. ān-añja, mid. s. 1. ān-aj-ē, pl. 3. ān-aj-rē. The analogy spread from these to the roots which have no masal; pl. 3. ān-re-ūr, ān-rdh-ūr, ān-rh-ūr; mid. s. 3. ān-re-ē, ān-rdh-ē.
- 7. bhū bc has the double irregularity of reduplicating with a and retaining its ū throughout (cp. Gk. πε-φύ-āσι): sing. I. ba-bhū-v-a (Gk. πέ-φυ-κα). 2. ba-bhū-tha and ba-bhū-v-i-tha. 3. ba-bhū-v-a. Du. 2. ba-bhū-v-áthur. 3. ba-bhū-v-áthur. Pl. I. ba-bhū-v-i-mā. 2. ba-bhū-v-á. 3. ba-bhū-v-úr.

In a Sûtra occurs the 2: pl. mid. an-aa-a-dhve.

su bring forth has the same peculiarities' in sa-su-v-a, the only perfect form of this root occurring.

8. cyu stir reduplicates ci-oyu (beside cu-oyu) and dyut shine similarly di-dyut. This was due to the vocalie

pronunciation of the y: ciu, diut.

9. The reduplicative vowel is lengthened in more than thirty perfect stems ; e.g. kan be pleased : ca-kan ; gr wake : jā-gr; kip be adapted: cā-kip; dhī think: dī-dhī; tu be strong : tū-tu ; śū swell : śū-śu."

z. In the Mantra portion of the Sambitas there once occurs a pariphrastic perfect form with the reduplicated perfect of ky make governing the acc, of a fem, substantive in a derived from a secondary (cansative) verbal stem. This form is gamayam cakara (AV.) he counsel to go (lit. ments a causing to go). In the Brahmana parts of the later Samhitas (TS., MS., K.) such periphrastic forms are occasionally met with, and they become more frequent in the regular Brahmanas.

Moods of the Perfect.

140. Modal forms of the perfect are of rare occurrence in the Sambitas except the RV.

1. The subjunctive is normally formed by adding a to the strong perfect stem accented on the radical syllable. In the active the secondary endings are the more usual; when the primary endings are used the reduplicative syllable is in several forms accented.1 In about a dozen forms the weak stem is used. Middle forms, of which only seven or

I The root at its also reduplicates with a in the part as-say-and. These three, bhu, su, si, are the only roots with an 1 or a vowel that reduplicate with a.

Cp. the accontaction of the reduplicating class in the present

avateur.

Here the radical vowel itself is shortened. The quantitative form of the stem is subject to the rule that it may not contain two presodically short vowels (except in the f. s, act.). Hence sah reduplicates either as sa-rah or sa-sah (in a weak form)

eight occur, are almost restricted to the 3, sing. Examples are:

Act, s. 1. an-aj-a (añj anoint); 2. ta-tán-a-s (tan stretch), bu-bódh-a-s (budh scake), pi-práy-a-s (pri please); jú-jos-a-si (jus enjoy); ci-kit-a-s (cit observe), mu-muc-a-s (muc rolease). 3. ci-ket-a-t, ja-ghán-a-t (han smite), ta-tán-a-t, tu-stáv-a-t (vstu praise), pi-práy-a-t; di-des-a-ti (dis point), bú-bodh-a-ti, mu-moc-a-ti; mu-muc-a-t, vi-vid-a-t (vid find).

Du. 2. ci-ket-a-thas, ju-jos-a-thas. Pl. 1. ta-tan-a-ma.

2. ju-jos-a-tha. 3. ta-tán-a-n.

Mid. s. 3. ta-táp-a-te, jú-joş-a-te, Pl. 1. an-ás-ámahai.

2. The injunctive occurs in hardly a dozen forms, a few in the sing. act., the rest in the 3. pl. mid.; e.g. s. 2. śa-śās (= śa-śās-s: śās order). 3. dū-dho-t (dhū shake), su-sro-t (sru flow); mid. pl. 3. ta-tán-a-nta (cp. 140, 6).

The optative is formed by adding the accented modal suffix combined with the endings to the weak perfect stem. The active forms are much commoner than the middle.

Examples are:

Act. s. 1. ăn-uś-yām, ja-gam-yūm, ri-ric-yam, vavrt-yām. 2. ba-bhū-yās, va-vrt-yās. 3. an-aj-yāt, jagam-yāt, va-vrt-yāt, ba-bhū-yāt.

Du. 2. ja-gam-yatam. Pl. 1. va-vrt-ya-ma 3. ja-gam-

yür, va-vrt-yür.

Mid. s. l. va-vṛt-iya. 2. va-vṛdh-i-thas. 3. va-vṛt-i-ta. Pl. l. va-vṛt-i-mahi.

a. There also occurs one mid. precative form sa-sah-i-s-thas (eah ourcome).

In these three forms the \$\tilde{a}\$ of the reduplicative syllable an is shortened as if the indicative contained an augment.

Identical in form with the unaugmented pluperfect (140, 6);

^{*} From ains affain, with the long reduplicative vowel retained. Cp. 130, 6.

4. The imperative perfect is formed like that of the present reduplicating class, the radical syllable being weak except in the 3. s. act., where it is strong. Nearly all the forms occurring, which number about twenty, are active. Examples are:

Act. s. 2. ci-kid-dhi (voit), di-did-dhi (vdis), mumug-dhí (/muo), śa-śa-dhí (/śas), 8, ba-bhú-tu, mu-mók-tu.

Du. 2. mu-muk-tam, va-vrk-tam (vrj twist). Pl. 2. di-dis-tana (vdis), va-vrt-tana.

Mid. s. 2. va-vrt-svá. Pl. 2. va-vrd-dhvám.

Participle.

5. Both active and middle forms of the perfect participle are common. It is formed from the weak perfect stem. with the accent on the suffix, as cakr-vams, cakr-ana. If, in the active form, the stem is reduced to a monosyllable, the suffix is nearly always added with the connecting yowel i, but not when the stem is unreduplicated; e.g. papt-i-vams (Gk. πεπτ-ώς), but vid-vams (Gk. ε/δ-ώς). Examples are:

Act. ja-gan-vams (/gam), ja-grbh-vams (/grabh), ji-gi-vams (/ji), jū-ju-vams (/jū), ta-sthi-vams (/sthā), ba-bhū-vāms (Gk. πε-φυ-ώς), ri-rik-vāms (vrio), va-vrtvams, va-vrdh-vams, sa-sah-vams, su-sup-vams(√svap); īy-i-vāms (vi), ūs-i-vāms (vas dicell); dāś-vāms (dāś worship), sah-vams (v sah).

Mid, ăn-aj-ăná (vañj), ân-aś-āná (vamś), ij-ăná (vaj), ūc-ānā (√vac), ja-gm-ānā (√gum), ti-stir-āṇā (√stī), tepānā (vtap), pa-spaš-ānā (vspaš), bhej-ānā (vbhaj),

¹ Cp. Gk. si-kan-be, I. pl. si-che-re (khr = hrn hone).

³ With a unahanged as in strong forms elsewhere (180, 7),

¹ With long reduplicative vowel.

yem-ānā ($\sqrt{\sin}$), vā-vṛdh-ānā, śa-śay-ānā ($\sqrt{\sin}$), ši-śriy-āṇā ($\sqrt{\sin}$), si-ṣmiy-āṇā ($\sqrt{\sin}$), su-ṣup-āṇā ($\sqrt{\sup}$), seh-ānā ($\sqrt{\sinh}$).

Pluperfect.

6. Corresponding to the imperfect there is an augmented form of the perfect called the pluperfect. The strong stem is used in the singular active, the weak elsewhere. The secondary endings only are used; in the 3. pl. ur always appears in the active and iran, in the middle. The s and t of the 2 and 3. s. are in some forms preserved by an interposed i. There are also several forms made with thematic a in this tense. The augment is often dropped, as in other past tenses. The total number of pluperfect forms occurring is about sixty. Examples are:

Act. s. l. á-cacakṣ-am, á-jagrabh-am, á-tuṣṭav-am; cakar-am, ciket-am (√cit). 2. ā-jagan (= á-jagam-s); na-nam-a-s; á-viveá-ī-a (√viá). 3. á-jagan (= á-jagam-t), a-ciket (√cit); rā-ran (= rāran-t: ran rejoice); á-jagrabh-ī-t; á-cikit-a-t and á-ciket-a-t; tastambh-a-t.

Du. 2. á-mu-muk-tam; mu-muk-tam. 8. á-vāvas-ī-tām (vās davas).

Pl. 2. á-jagan-ta; á-cucyav-ī-tana. 3. á-cucyav-ur.

Mid. s. 1. á-šuśrav-i. 3. didiş-ţa (√diś). Pl. 3. á-cakriran, á-jagm-iran, á-pec-iran; á-vavṛt-ran, á-sasṛg-ram (√sṛj).* There are also several transfer forms as from a stems; e.g. á-titviṣ-a-nta, cakṛp-á-nta, dá-dhṛṣ-a-nta.

Aorist.

141. This tense is of very common occurrence in the Vedas, being formed from more that 450 roots. It is an

^{*} Two forms take run only instead of iran. There are also several transfer forms in anta.

⁴ With reversion of the palatal to original guttural, and anding ram for ran.

augmented tense, taking the secondary endings and forming moods and participles. It is distinguished from the imperfect by having no corresponding present and by difference of meaning. There are two types of sorist. The first or signatic sorist is formed by inserting s, with or without an added a, between the root and the endings. It is taken by more than 200 roots. The second sorist adds the endings to the simple or the reduplicated root either directly or with the connecting vowel a. It is taken by over 250 roots. There are four forms of the first Aorist, and three of the second. Upwards of 50 roots take more than one form. One verb, budh wake, has forms from five varieties of this tense.

First Aorist.

a. The stem of the first form is made by adding to the augmented root the suffix sa. It is inflected like an imperfect of the sixth or a class of the first conjugation, the sa being accented in unaugmented forms. It is taken in the Samhitās by only ten roots containing one of the vowels i, u, r, and ending in one of the consonants j, s, s, or h, all of which phonetically become k before s. These roots are: mrj wipe, yaj sacrifice, vrj twist; krus cry out, mrs and sprs touch; dvis hate; guh hide, duh milk, ruh ascend. In the indicative no dual forms are found; and in the mid, only the 3. s. and pl. are met with. The only moods occurring are the injunctive and the imperative, with altogether fewer than a dozen forms. This form of the sorist corresponds to the Greek First Aorist (e.g. ž-ŝeife, Lat. dixi-t). The augment, as in other past tenses, is sometimes dropped.

In B. nine additional roots take the as sorist: kre drag, dis point, dib maser, dri see, drub to heatile, pig crush, milk masgers, vis outer, wrb tear; and in S. lib life.

^{*} The stem of this sorist therefore always ands in kas.

Indicative. Act. s. 1. ávrksam. 2. ádruksas (B.), ádhuksas. 3. ákruksat, ághuksat, áduksat i and ádhuksat, ámrksat (/mrš), áruksat, ásprksat. Pl. 1. ámrksama. (/mrj), áruksama. 3. ádhuksan; duksan i and dhuksan.

Mid. s. S. adhuksata; duksata' and dhuksata. Pl. S. amrksanta (/ mrj).

In the injunctive only the following forms occur:

Act. s. 2. dukşás, mrkşás (/mrś). 3. dvikşát. Pl. 2. mrkşata (/mrś).

Mid. s. 3. duksáta and dhuksáta, dviksáta. Pl. 3. dhuksánta.

In the imperative only three forms occur:

Act. du. 2. mrksátam (/mrj). 3. yaksátám.

Mid. s. 2. dhukşásva.

142. The other three forms of the First Aorist are made by adding to the augmented root the suffixes s, is, s-is respectively. They are inflected like imperfects of the second or graded conjugation. The sis form is used in the act, only (excepting three optative forms) and is taken by not more than six roots. The other two are very common, being formed from nearly 300 roots in V. and B. taken together.

Second or s form.

143. This form of the agrist is taken by at least 135 roots in V, and B. In addition to the indicative it forms all the moods and a participle.

Indicative.

 The radical vowel as a rule takes Vrddhi (a being lengthened) in the active. In the middle, excepting final i and u (which take Guna) the radical vowel remains un-

¹ On these forms without initial aspiration up. 62 c.

changed. The only point in which the inflexion differs from that of the imperfect of the graded conjugation is that the 3. pl. act. invariably ends in ur. In the active, the endings s and t of the 2. 3. s. disappear and the tense sign also, unless the root ends in a vowel; e.g. å-hår = å-hår-s-t, but å-hå-s = å-hå-s-t. The AV. and TS., however, less often than not, insert a connecting ī before these endings, thus preserving both the latter and the s of the tense stem; e.g. å-naik-ş-ī-t (nij wash). The forms of the indicative actually occurring would, if made from bhr bear in the active, and from budh waks in the middle, be as follows:

ACTIVE.

SINGULAD.	DUAL.	PLURAL.
I. á-bhār-ş-am 2. á-bhār	[á-bhārş-va] á-bhārs-tam	á-bhárs-ma á-bhárs-ta
3. á-bhár	á-bhūrṣ-jām	á-bhār-ş-ur

MIDDLE.

	SINGULAR.	DUAL.	PLURAL.
3,	á-bhut-s-i (62 a) á-bud-dhās (62 b) á-bud-dha (62 b)	(á-bhut-s-vahi) á-bhut-s-áthám á-bhut-s-átám	á-bhut-s-mahi á-bhud-dhyam (62 a)

The middle voice, as exemplified by a root ending in u, stu praise, is inflected as follows:

Sing. 1. á-sto-ş-i. 2. á-sto-ş-thās 3. á-sto-ş-ṭa. Du. 1. [á-sto-ş-vahi]. 2. [á-sto-ş-āthām]. 3. á-sto-ş-ātām. Pl. 1. á-sto-ş-mahi. 2. á-sto-dhvam (66 B 2 b). 3. á-sto-ş-ata.

I The RV, and K, have no forms with the inserted i; while in B, the chief forms without it are adrek (drá se) and a; à; (ya) complet; also bhais (ybhf) = bhais-a, which while losing the a ending preserves the appearance of a 2 sing.

2. The subjunctive is common in the RV, in active forms, but not in the middle. The root regularly takes Guna throughout (active and middle). The primary endings are frequent. The forms occurring, if made from stu praise, would be:

Act. sing. 1. stó-ş-āṇi. 2. stó-ş-a-si, stó-ş-a-s. 3. stóş-a-ti, stó-ş-a-t. Du. 2. stó-ş-a-thas. 3. stó-ş-a-tas. Pl. 1. stó-ş-ā-ma. 2. stó-ş-a-tha. 3. stó-ş-a-n.

Mid. sing. 1. stó-s-ai. 2. stó-s-a-se. 3. stó-s-a-te. Du. 2. stó-s-athe (for stó-s-aithe). Pl. 3. stó-s-a-nte.

3. Injunctive forms are fairly common. When normal they are of course identical with the unaugmented indicative. But the sing. I. act. is irregular in never taking Vrddhi: all the forms of it that occur either have Guna, as sto-s-am, je-s-am (vii); or lengthen the radical vowel, as yū-ş-am (yū separate); or substitute e for ā in roots ending in ā, as ye-ş-am (yā yo), ge-ş-am (gū yo), athe-ṣ-am (sthā stand). The latter irregularity also appears in pl. 1: je-ṣ-ma, ge-ṣ-ma, de-ṣ-ma (dā qūv), beside the normal yau-ṣ-ma (yu separate).

t. The optative occurs in the middle only, the 2, 3, a always having the precative a (with one exception). The

forms actually occurring are:

Sing. I. di-ş-iyā (dā cut), bhak-ṣ-īyā (bhaj divide), ma-s-īyā (man think), mnk-ṣ-īyā (mno release), rā-s-īyā (rā gice), sāk-ṣ-īyā (AV.), stṛ-ṣ-īyā (stṛ strew). 2. maṃs-ī-ṣ-ṭhās (man think). 3. dar-ṣ-ī-ṣ-ṭa (dr tear), bhak-ṣīta (SV.), maṃ-s-ī-ṣ-ṭa, mrk-ṣ-ī-ṣ-ṭa (mro injure). Du. 2.

With radical a reduced to it op, 5 c. Similarly dhi-s-lya (/dha) in R.

With an reduced to a (= sonant nasal),

³ Subjunctives of this sor, are very rare in B, except yaks-a-t (\sqrt{ya}) and vaks-a-t (\sqrt{yah}).

⁴ From sah overcoms, with radical vowel lengthsned.

Anusvara for a (05 A 2).

Without the precative a.

trā-s-ī-thām¹ (trā protect). Pl. 1. bhak-ṣ-ī-máhi, mam-s-ī-máhi, vam-s-ī-máhi and va-s-ī-máhi (van win), sak-ṣ-ī-máhi (sac follow), dhuk-ṣ-ī-máhi (duh milk). 8. mam-s-ĭrata.

- 5. Only six imperative forms occur, and four of these are transfers (with thematic a). They are: Act. s. 2. ne-ş-a (nī lead) and par-ş-a (pr luke across). Mid. s. 2. sāk-ṣva (√sah). 3. rā-s-a-tām. Du. 2. rā-s-āthām. Pl. 3. rā-s-a-ntām.
- Only two or three forms of the active participle occur: dák-ş-at and dhák-ş-at (dah burn), sák-ş-at (√sah).

About a dozen stems, irregularly formed by adding s to the root with an intermediate a and taking the regular ending ana, may be accounted middle s aorist participles; e.g. mand-a-s-ana rejoicing, yam-a-s-ana being driven.

Irregularities of the a form.

- 144. 1. Before the suffix s, (a) final radical n (as well as m) becomes Anusvāra (66 A 2), as á-mam-s-ata ($\sqrt{\text{man}}$), vam-s-i-māhi ($\sqrt{\text{van}}$); (b) a becomes t in the verb vas dwell and possibly also in vas shine; á-vāt-s-i-s* (AV.) thou hast dwelt and á-vāt (= á-vas-s-t) has shone (AV.).
- 2. The RV. has one example of an incipient tendency to preserve the a and t of the 2. 3. s. in 2. s. á-yā-s (=a-yaj-s-s) beside the phonetically regular form of the 3. s. á-yāt (=á-yaj-s-t). The AV. has three or four examples of this: s. 2. srā-s (= sraj-s-s: √srj); 3. á-śrai-t (= á-śrai-s-t;

For tra-s-tyatham.

With Anusvars for n (66 A 2).

[&]quot; With an reduced to a (= sonant assal).

^{*} Without initial aspiration; ep. 62 a and 156 a,

^{*} See 66 B 1. In an Upanisad the 2 du appears as 4-vas-tam, the aer, suffix a having been lost without affecting the radical s.

Çri); á-hai-t (= á-hai-s-t: √hi); á-vā-t' (= a-vas-s-t: vas shine). The later Samhitās here frequently preserve these endings by inserting i before them: s. 2. á-rāt-s-i-s (√rādh), á-vāt-s-i-s (vas duell); 3. á-tām-s-i-t (√tan), á-natk-ṣ-i-t (√nij), tāp-s-i-t (√tap), bhai-ṣ-i-t (√bhī), vāk-ṣ-i-t (√vah), hā-s-i-t, hvār-ṣ-i-t (√hvar).

a. The ending divam (before which the sof the aux is lost) becomes divam when the s would have been corebralized (66 B 2): 5-sto-divam (=6-sto-g-divam) is the only example.

3. The roots dă gire and dă cut reduce the radical vowel to î în á-di-ş-i, di-y-īyá; gam, man, van lose îheir nasal în á-ga-smahi, ma-s-īyá, va-s-ī-máhi (beside vam-s-ī-máhi); while sah lengthens its vowel in á-sāk-ş-i, sāk-ş-i; sāk-ş-āma; sāk-ş-īya; sāk-ş-va.

4. The roots srj emit and pre mix take metathesis in the net.: s. 2. sra-s (= srak). 3. á-srak; á-prak. Do. 2.

å-sräs-tam.

- 5. The following are the forms occurring in the 3. s. ind. act. in which (a) the ending t is lost: â-jai-s (/ji), â-prā-s, â-hā-s; (b) both the tense-sign s and the ending t are lost: â-krăn (krand cry out), â-kṣār (kṣar flow), â-cait (cit perceive), â-chān (chand seem), â-tān (tan sirelch), â-tsār (tsar approach stealthily), â-dyaut (dyut shine), â-dhāk (dah lurn), â-prāk (pre mix), â-prāt (prach ask), â-bhār (bhṛ), â-yāṭ (yaj saerlfice), â-yān (yam guide), â-raut (rudh chstruct), â-vāṭ (vah convey), â-vāt (vas shine), â-svait (śvit be bright), â-syān (syand move on), â-srāk (sri emit), â-svār (svar sound), â-hār (hṛ take), â-raik (ric leave).
 - 6. After a consonant other than n, m, r the tense sign s is dropped before t, th, and dh; e.g. a-bhak-ta (beside a-bhak-e-i); a-muk-thas (beside a-muk-s-i).

But the timey in this instance represent the changed final radical a: 144, 1 (a). There are a few additional examples in B: a sit (beside ajais and sinight: √B); neut (√ci); nait (√ni).
 And even the final consenant of the root when there are two (28).

Third or is form.

145. About 145 roots take this sorist in V. and B. It differs from the s sorist merely in adding the s with the connecting vowel i, which changes it to s (67).

Indicative.

1. The radical vowel as a rule takes Guna throughout; but in the active a final vowel takes Vrddhi and a medial vowel is sometimes lengthened. The endings are the same as those of the s acrist except that the 2. 3, s, end in is (= i5-s) and it (= i5-t). This acrist has all the moods, but no participle. Middle forms are not common and very few occur except in the 2, 3, sing.

The normal forms occurring, if made from kram stride, would be:

Act. sing. 1. á-kram-iş-am. 2. á-kram-iş. 3. á-kram-it. Du. 3. á-kram-iş-tam. Pl. 1. á-kram-iş-ma. 3. á-kramiş-ur.

Mid. sing. 1. á-kram-iş-i. 2. á-kram-iş-thās. 3. á-kramiş-ta. Du. 3. á-kram-iş-ātām. Pl. 8. á-kram-iş-ata.

2: Subjunctive forms are rare except in the 2, 3, a, act. Examples are:

Act, sing. I. dáv-iş-āņi. 2. áv-iş-a-s, kān-iş-a-s. 3. kāriş-a-t, bodh-iş-a-t. Pl. 3. sán-iş-a-n.

Mid. pl. I. yac-iş-a-mahe. S. san-iş-a-nta.

3. Injunctive are commoner than subjunctive forms. They occur most frequently in the 2. 3. s. and plur. Examples are:

Act. sing. I. šáms-iş-am (šams proise). 2. áv-is (av favour). tár-is (tř cross), yódh-is (yudh fight), sáv-is (sū generate). 3. áś-it (uś cat), tár-īt. Du. 2. táriş-tam, márdh-iṣ-tam (mṛdh neglect). Pl. I. śrám-iṣ-mu. 2. vádh-iṣ-ta and vádh-iṣ-tana. 3. jár-iṣ-ur (Jř waste away).

Mid. sing. I. radh-is-i (radh succeed). 2, márs-is-thás

(mṛṣ not heed). 3. pāv-iṣ-ṭa (pū purify). Pl. 1. vyāth-iṣ-mahi (vyath waver).

4. Optative forms are rare, occurring in the middle only. The 2. 3. s. take the precative s. Examples are:

Sing. I. edh-iş-īyá (edh thrice). 2. mod-iş-ī-ş-thás (mud rojoice). 8. jan-iş-ī-ş-tá. Du. I. sah-iş-ī-váhi. Pl. tār-iş-i-māhi.

- Imperative forms are rare, occurring in the active only.
 Sing. 2. av-iq-qhi. 3. av-iş-tu. Du. 2. av-iş-tam. 3. av-iş-tam. Pl. 2. av-iş-tama.
- s. The radical medial a is lengthened in kan every, car more, das stade, and extilerate, stan thouser, avan sound, and extinually in vad speak, ran reject, san gain, sah pressit; while the radical syllable appears in a reduced or unstroughened form in the opt. a. 1. mid. of gam and rue shows gun-in-lya and rue-in-lya.

b. The root grabb seize takes the connecting vowel I (as it does in

other verbal forms) instead of t, as a-grabh-ig-ma.

c. In s. I. ind. set, the anding im appears instead of is-am in the three torms a-kram-im, a-grabh-im, and vadh-im, doubtless owing to the analogy of the 2. S. s. in is, it. In B. is also found a-grah-ais-am (Vgrah).

Fourth or sis form.

- 146. This form differs from the preceding one simply in prefixing an additional s to the suffix. Only seven verbs ending in ā, n, or m, gā sing, jūā know, pyā fill up, yā go, hā leave, van win, ram rejuice, take this acrist. The total number of forms occurring is under twenty; and middle forms are found in the optative only. The forms occurring are:
- Indicative. Sing. 1. á-yā-sis-am. Du. 3. á-yā-sisţām. Pl. 2. á-yā-sis-ţa. 3. á-gā-sis-ur, á-yā-sis-ur.
 - 2. Subjunctive. Sing, 3. ga-sis-a-t, ya-sis-a-t.

¹ In B. also occurs this think, beaules forms in a-1t from dra sleep, va blow, hva call.

- Optative. Sing, I. vam-siş-īyá. 2. yā-siş-ī-a-thās,
 Pl. I. pyā-siş-ī-mahi.
- Injunctive. Sing. 1. ram-siş-am. Du. 2. hā-siş-ţam.
 hā-siş-ţām. Pl. 2. hā-siş-ṭa. 3. hā-siş-ur.
 - 5. Imperative. Du. 2. yā-sis-tám. Pl. 2. yā-sīs-tá.

Second Aorist.

147. This agrist resembles an imperfect formed directly from the root, the terminations being added with or without the connecting yowel a.

The first form is like an imperfect of the accented a class (125, 2), the stem being formed by adding a to the unmodified root. It corresponds to the second agrist of the first conjugation in Greek. It is taken, in V. and B. together, by nearly eighty roots, chiefly with a medial vowel, Middle forms are rare.

I. Indicative. The forms actually occurring would, if made from vid find, be as follows:

Act. sing, I. ávidam. 2. ávidas: 3. ávidat. Du. I. ávidava. Pl. l. ávidama. 2. ávidata. 3. ávidan.

Mid. sing. 1. ávíde. 2. ávidathas. 3. ávidata. Du. 1. ávidāvahi. 3. ávidetām. Pl. 1. ávidāmahi, 3. ávidanta.

2. The subjunctive forms from the same root would be:

Act. sing. 2. vidási, vídás. 8. vidáti, vidát. Du. 1. vidáva. 2. vidáthas. 8. vidátas. Pl. 1. vidáma. 2. vidátha, vidáthana.

Mid, sing. 3, vidate. Pl. 1, vidamahe.

3. The injunctive forms from vid would be:

Act. sing. 1. vidám. 2. vidás. 3. vidát. Pl. 3. vidán. Mid. sing. 3. vidáta. Pl. 1. vidámahi. 3. vidánta.

4. The optative is rare in V., but not infrequent in B,

¹ With precative a.

² With I for L

Three roots with r, however, show forms with Guna (147 a 2 and s).

It is almost restricted to the active. The forms from vid would be:

Act. sing. 1. vidéyam. 2. vidés. 3. vidét. Pl. 1. vidéms.

Mid. sing. 1. vidéya. Pl. 1. vidémahi. There also occurs one precative form, s. 8. vidésta (AV).

5. Imperative forms are rare and almost restricted to the active. Those made by sad sit are:

Sing. 2. sadá. 3. sadátu. Du. 2. sadátam. 3. sadátam. Pl. 2. sadáta, sadátana. 3. sadántu.

Mid. pl. 2. sadadhvam. 8. sadantām.

 Rather more than a dozen examples of the participle, taking active and middle together, occur; e.g. trp-ant, sucant; guhamana, sucamana.

Irregularities.

- Several roots form transfer stems seconding to this instead of the root form, chiefly by reducing the radical syllable.
- 1. hhyā see, vyā emekça, hvā sail shorten their ā to a: ā-khya-t, ā-vya-t, ā-hva-t; dā gies, dhā put, athā shand occasionally do the same, in the forms å-da-t; ā-dha-t (SV.) and dha-t; ā-atha-t (AV.); sās order shortens a to 1; c. g. 5. s. inj. āigat, part, āigānt.
- 2. ky make and gam ye form a few transfers from the root class in the AV., retaining the strong radical vowel; s-kar-s-t, s-gam-a-t, s-gam-a-p.
- A The root is reduced by the loss of its massl in krand my ow, tame shalls, divame smaller, theraps full, randh weaks subject, aranga full; e.g. 3, sing. finsat; pl. divasan; subj. pl. 1. radham; inj. sing. 1. radham; 2 kradas; 3. bhrasat;
- c. The root takes Guna in r po, drá ses, sr 30e ; e.g. ár-anta (unaugmented 3. pl. ind. mid.); dárá-am (a. 1. inj., but pl. 3. inj. dráan, opt. 1. s. dráéyam, pl. drásma); sárat (unaugmented 5. s.).

Second Form: Root Aorist.

148. This form of the simple agrist is taken by about 100 roots in V., and about 25 others in B., the commonest being those with medial a (about 30). It corresponds to

the second agrist of the second conjugation in Greek. It is inflected in both active and middle.

Indicative.

1. The root is strong in the sing, act., but weak elsewhere. Roots ending in vowels, however, tend to retain the strong vowel throughout the active except the 3. pl. Those ending in 3 regularly retain that vowel throughout the ind. act. except in 3. pl. where it is dropped before ur, which is always the ending in these verbs. In the 3. pl. mid, the ending ran is more than twice as common as ata; ram as well as ran is taken by three roots.

a. The forms occurring from roots ending in a, if made from stha, would be:

Act. sing. I. á-sthā-m (ἔ-στη-ν). 2. á-sthā-s. 3. á-sthā-t (ἔ-στη). Du. 2. á-sthā-tam. 3. á-sthā-tām. Pl. 1. á-sthā-ma (ἔ-στη-μεν). 2. á-sthā-ta. 3. á-sth-ur.

Mid. sing. 2. å-sthi-thäs (έ-στά-θης). 3. å-sthi-ta. Pl. I. å-sthi-mahi. 3. å-sthi-ran.

b. Roots in r take Guna throughout the ind. act. except the 3. pl. The forms from kr would be:

Act. sing, I. á-kar-am. 2. á-kar. 3. á-kar. Du. 2. á-kar-tam. 3. á-kar-tam. Pl. I. á-kar-ma. 2. á-kar-ta. 3. á-kr-an.

Mid. sing. I. á-kr-i. 2. á-kṛ-thās. 3. á-kṛ-ta. Do. I. á-kṛ-vahi. 3. á-kṛ-tām. Pl. I. á-kṛ-mahi. 2. á-kṛdhyam. 3. á-kṛ-ata.

e. bhu he retains its u throughout (as in the perfect), interposing v between it and a following a:

Act. 1. á-bhuv-am. 2. á-bhū-s. 3. á-bhū-t (ξ-φυ). Du. 2. á-bhū-tam. 3. á-bhū-tām. Pl. 1. á-bhū-ma (ξ-φυ-μεν). 2. á-bhū-ta and á-bhū-tana. 3. á-bhū-v-an.

d. The following are forms of the 2. 3. s. act, in which

¹ With split a; in the later language a-bhuv-am.

the endings s and t are lost: 2. á-kar, á-gan (= á-gam-s), á-ghas, á-var (vr. cover), á-spar (spr. win); with lengthened augment: á-nat! (naš ultain), â-var (vr. cover), â-vas! (vas shine).

3. á-kar, á-kran! (kram stride), á-gan,! á-ghas, á-cet (cit observe), á-tan, á-dar (dr. pierce), á-bhet (bhid pierce), á-bhrāt (bhrāt shine), á-mok (muc release), á-myak (myaks be situated), á-vart (vrt turn), á-star; with lengthened augment: â-nat, tá-var (vr cover), á-vas! (vas shine); without augment: vark! (vrj twist), skan! (skand leap).

c. In the 3 pl. act, and mid. roots with medial a are syncopated: á-kṣ-an (=á-ghas-an), á-gm-an (=á-gam-an); á-gm-ata (=á-gam-ata), á-tn-ata (=á-tan-ata); but in the 2. 3, s. mid. they lose their nasal: á-ga-thās, á-ga-ta, á-ma-ta (but 1. du. gan-vahi, pl. á-gan-mahi).

f. Final à is in the mid, ind, reduced to i, and before m also to i; e.g. 2. á-di-thās, á-sthi-thās. 3. á-dhi-ta (έ-θε-το). Pl. 1. á-dhi-mahi (TS.) and á-di-mahi (VS.), á-dhī-mahi.

g. In the 3. s. ind. ghas is reduced to g: gdha (= ghas-ta); while r go takes Guna: ar-ta (unaugmented) and ar-ta (ωρ-ro), 3. pl. ar-ata.

h. The forms taking ran in 3, pl. mid. are; å-krp-ran, å-grbb-ran, å-jus-ran, å-drś-ran, å-pad-ran, å-budh-ran, å-yuj-ran, å-vas-ran (vas shine), å-vis-ran, å-vrt-ran, å-srg-ran, å-sthi-ran, å-sprdh-ran; with ram; å-drś-ram, å-budh-ram, å-srg-ram.

¹ For a-mas-s, the phonetic result of which should have been a-mak (63t),

² For a-vas-s, a-vas-t. These forms have by an oversight been unlitted in § 400 of my Fadic Grammar.

² For a-kram-1, a-gam-1.

^{*} For a-nes-t, For varj-t. * For skand-t.

¹ By syncopation gh-s-ta; loss of a between consenants (66 B 2a) gh-ta, and loss of aspiration, which is thrown forward on the 4 and renders it sonant (62 8).

With reversion to the original guttural.

The subjunctive is common, nearly 100 forms being met with. The forms occurring, if made from kr, would be:

Ant. sing. 1. kárá and kár-aṇi. 2. kár-a-si and kár-a-s. 3. kár-a-ti and kár-a-t. Du. 2. kár-a-thas. 3. kár-a-tas. Pl. 1. kár-ā-ma. 3. kár-anti, kár-a-n.

Mid. sing. 2. kár-a-se. 3. kár-a-te. Pl. 1. kár-a-mahe and kár-a-mahai. 3. kár-anta.

3. The injunctive is fairly frequent, nearly sixty forms of it being met with. Examples are:

Act. sing. 1. kar-am, darś-am, bhuv-am, bhoj-am. 2. je-s, bhū-s, bhé-s (bhī fear), dhak ' (dagh reach), bhet (bhid split), rok (ruj break). 3. bhū-t, śro-t (√śri), nak and nat (naś attain). Pl. 1. dagh-ma, bhū-ma; ched-ma, ho-ma ' (hū call). 3. bhūv-an, vr-an (vr cover); kram-ur, dur (dā giec), dh-ūr (dhā put).

Mid. sing. 1. namé-i (namé = naé attain). 2. nut-thūs (nud push), mṛ-thūs (mṛ die), mṛṣ-thūs (mṛṣ noglect), rik-thūs (ric leave). 3. ar-ta (ṛ go), aṣ-ṭa (aś attain), vik-ta (vij tremble), vṛ-ta (vṛ choose). Pl. 1. dhī-mahi (dhū put).

4. More than forty optative forms are met with. Examples are:

Act. sing. 1. aś-yẩm (aś obtain), vrj-yẩm, de-yẩm (đã give). 2. aś-yẩs, rdh-yẩs, gam-yảs, jũe-yẩs, bhū-yẩs. 3. bhū-yất (AV.). Pl. 1. aś-yẩma, rdh-yẩma, kri-yẩma, bhū-yẩma, sthe-yẩma. 3. aś-yúr (aś attain), dhe-yúr.

Mid. sing. 1. aś-īyā. 3. ar-ī-tā (r 90). Pl. 1. aś-ī-máhi, idh-ī-máhi (idh kimille), naś-ī-máhi (naś reuch).

¹ The root is weak in the isolated forms fdh-a-t, bhuv-a-t, srdv-a-t.

The weak root appears once in the form idh-a-té. The weak root also appears ence in the 2. du. form rdh-athe.

This may, however, be an irregular a norist : ep. 147 c.

^{*} For dagh-s.

² With strong radical yowel,

^{*} The RV. has no forms of the 3. s. in yat, but only precatives in yat (- yas-t).

a. There are also about thirty precative forms (made from about twenty roots in the Samhitas), all of which except two are active. Examples are:

Act. sing. 1. bhū-yāsam. 3. aś-yās (= aś-yūs-t), gamyās, dagh-yās, pe-yās (pā drink), bhū-yās. Du. 2. bhū-yāstam. Pl. 1. kri-yāsma. 2. bhū-yāsta.

Mid, s. 8. pad-ī-ş-ţa, muc-ī-ş-ţa.

5. Over ninety forms of the imperative occur, all but about twelve being active. Several forms in the 2 persons act. have a strong root, which is then usually accented. Examples are:

Act a 2. kṛ-dhi, ga-dhi (gam), pūr-dhi (pṛ fill), bo-dhi, 'yō-dhi ' (yudh fight), śag-dhi (śak be able); ga-hi (gam go), mā-hi (mā measure), sā-hi (sā bind). 3. gán-tu (gam go), dhā-tu, bhū-tu, śrō-tu.

Du. 2. kṛ-tám and kār-tam (AV.), ga-tám and gan-tám, dā-tām, dhak-tam (dagh reach), bhū-tám, var-tam (vṛ-cour), vo-lhám (vah carry), śru-tám. 3. gan-tām, pā-tām, vo-lhám. Pl. 2. kṛ-ta and kār-ta, ga-ta and gān-ta, bhū-ta, yān-ta, śru-ta and śrō-ta; kār-tana, gán-tana, dhū-tana, bhū-tana. 3. gám-antu, dhāntu, śruv-antu.

Mid. s. 2. kr-svá, dhi-svá (dhá pul), yuk-svá (yuj join); accented on the root: mát-sva, yák-sva (yaj sacrífice), rá-sva, vám-sva (van win), sák-sva (sac follow). Pl. 2. kr-dhvam, vo-dhvam.

6. Of the participle only seven or eight examples occur in the active, but nearly forty in the middle. Examples are: Act. rdh-ant, kr-ant, gm-ant, sthant.

Mid. ar-āṇā, idh-ānā, kr-āṇā, dŕś-āna and dṛś-ānā, budh-ānā, bhiy-ānā, vr-āṇā (vr cover), śubh-ānā and śum-bhānā, suv-ānā (always to be pronounced svānā) and sv-ānā (SV.).

^{*} Formed from both bhu se (for bhu-dhi) and buth meats (for bod-dhi instead of bud-dhi).

For yad-dhi (through yod-dhi).

Third or Reduplicated Form.

149. This agrist is formed from nearly ninety verbs in the Samhitus and from nearly thirty more in the Bruhmanas. Though (with a few slight exceptions) unconnected in form with the causative, it has come to be connected with the causative in sense, having a causative meaning when the corresponding verb in ava has that meaning. The characteristic feature of this agrist is the almost invariable quantitative sequence of a long reduplicative and a short radical vowel (- c). In order to bring about this rhythm, the reduplicative yowel (unless it becomes long by position) is lengthened, if the radical vowel is (or is made) prosodically short. With this view the radical vowel is shortened in vas bellow, sadh succeed, hid be hostile and, by dropping the nasal, in krand cry out, jambh crush, randh subject, syand flow, srams full. The stem of the great majority of forms is made with a thematic a. But about a dozen roots ending in vowels (ā, i, ū, r) and svap sleep make occasional forms from stema without thematic a, the inflexion then being like that of an imperfect of the reduplicating class (127, 2). A medial radical yowel remains unchanged or is weakened, but a final vowel takes Guna. All the moods occur, but no participle.

Special Rules of Reduplication.

a. The vowels a, r, t are represented in the reduplicative syllable by i.

 The vowel of the reduplicative syllable, unless already long by position, is lengthened.

 The forms of the indicative actually occurring would, if made from jan beget, be as follows:

Act. s. l. ájíjanam. 2. ájíjanas. 3. ájíjanat. Du. 2. ájíjanatam. Pl. 1. ájíjanama. 2. ájíjanata. 3. ájíjanan. Mid. s. 3. ájíjanata. Pl. 2. ájíjanadhvam. 3. ájíjananta. The following are examples:

Act. s. 1. ánīnašam (naš be lost), ácīkṛṣam (kṛṣ dray), ápiplavam (B.), ápīparam (pr pass). 2. áci-krad-as, ábūbhuvas; siṣvapas; without thematic a: á-jīgar (gr swallow and gr waken); siṣvap. 3. ácīkļpat, ácucyavat (K.), ájīhiḍat (~hīḍ), ádidyutat, ábūbudhat, ávīvašat (~vāś), ávī-vṛdhat, ásiṣyadat (~syand); bībhayat, śiśnathat (śnath pieres); without thematic a: á-šiśre-t (~śri), á-šiśnat, Pl. 3. ávīvašan (~vāś), ásiṣrasan (~sraṃs), ásīṣadan (~sad); ábībhajur (B.).

Mid. s. S. ávīvarata (vr cover). Pl. 2. ávīvrdhadhvam. 3. ábībhayanta, ávīvasanta (√vāš), ásisyadanta.

2. The subjunctive is rare, only about a dozen forms occurring, all active except one. Examples are:

Act. s. 1. rāradhā. 2. tītapāsi. 3. cīkļpāti, pispṛśati,¹ zīṣadhāti (√sādh). Pl. 1. rīramāma, sīṣadhāma.

3. Injunctive forms are fairly common, more than fifty occurring in the active, but only five in the middle. Examples are:

Act. s. l. cukrudham, didharam (dhṛ hold). 2. cikṣipas, pispṛṣas, rīradhas, siṣadhas. 3. cucyavat, didharat, mīmayat (mā hellow), siṣvadat (svad sweeten).

Du. 2. jihvaratam. Pl. 2. rīradhata. 3. rīraman, śūśucan (śuc shine). 3. sīṣapanta (sap serve).

4. The optative forms number hardly a dozen, being made from only three roots, mostly from vac speak, the rest from cyu stir and ris hurt. They are:

Act. s. 1. vocéyam. 2. rīriņes, vocés. 3. vocét.

Du. 2. vocétam. Pl. 1. vocéma. 3. vocéyur.

Mid. s. l. vocéys. Pl. l. szcywww.renhi, vocémahi, 3. czoywwi.ratu. There is also the 3. s. mid. precative form riris-i-s-ta.

¹ Without thematic a.

140-150] MOODS OF THE REDUPLICATED AORIST 175

Hardly more than a dozen imperative forms occur, all of them active. These are:

Sing. 2. vocatat, 3. vocatu.

Du. 2. jigytám (gr waken), didhrtám, vocatam. Pl. 2. jigy-tá, didhrtá, paptata, vocata, susúdáta (AV.). 3. půpurantu (pr fill), šišrathantu.

Irregularities.

s. I. The reduplicative syllable of dynt shins has it : \$-didyntat; that of am injure repeats the whole root : \$m-am-at (= \$-am-am-at); while it is left short in lightam, lighta (beside \$-jigar), didhrisin, didhrid (beside \$-jigar), and in the isolated inj. didhra for

didipas (dip shine).

2. The radical syllable suffers contraction or syncopation (as in the weak forms of the perfect) in the three verbs mas be hel, vac speak, and pat fail; thus since-at (= sinamas-at), since-at (= sinamas-at), since-at (= sinamas-at) and since-at: cp. Gk, i-ev-o-s) and sinappriat. Having all had the reduplicative rewel of the perfect (while the regular sorist reduplicative I appears in the alternative forms sinamas-at and sinput-at), they were probably pluperfects in origin. But they have come to be sorists as is shown by their meaning and by the occurrence of modul forms (as vocatu, &c., and papeats).

3. The initial of the suffix is retained from the constitue stems jun-pays, sthu-pays, ha-pays, bhi-gays, ar-pays, ja-pays (√ji). The radical vowel is reduced to i in the first four, while the reduplicative vowel comes after instead of before the radical vowel in the fifth; thus a-ji-jñip-at; a-tl-gthip-at; ji-hip-as; bi-bhig-as, bi-bhig-as.

athas; arp-ip-am4; a-ji-jap-a-ta1 (VS).

Renedictive or Precative.

150. This is a form of the optative which adds an a after the modal suffix and which is made almost exclusively from agrist stems. In the RV, it occurs in the I. S. s. and

Without thematic a.

² Cp. its perfect reduplication: 189, 8.

Up, the perfect reduplication of roots with a + nasal (189, 6).
 Here the p of the suffix is not only retained, but reduplicated.

The causative of ji conquer from which this acr. is formed, would normally have been jay-aya. In B. also occurs the form a-ji-jip-ata.

1. pl. active, and in the 2, 3, a mid. The endings together with the modal suffix are:

Act, s. 1. yā-s-am. 3. yā-s (= yās-s); pl. 1. yā-s-ma. Míd. s. 2. î-ş-țhās. 3. î-s-ța.

 a. The only perfect precative occurring is the 2. s. mid.: sā-sah-i-s-thās.

b. Of the root sorist nearly thirty precatives are met with in the Samhitas. They occur in the act. I. 3. «, 2. du., I. 2. pl.; mid. 3. s. (see 148, 4 α). The a sorist and the reduplicated acr. have one precative form each in the 3. s. mid. (147, 4 and 149, 4). In the a sorist four precative forms occur in the 2, and 3. s. mid. (see 143, 4).

Simple Future.

151. The stem is formed by adding the suffix sya or (rather less frequently with connecting i) i-sya to the root. As the future sense is often expressed by the subjunctive and sometimes also by the indicative, the future tense is not common in the RV., being formed from only sixteen roots, while the AV. makes it from about thirty-two others, and the TS. forms it from over sixty roots. In V. and B. taken together over one hundred form the future in sya and over eighty that in isya. The only derivative verbs that form the future (always with isya) are causatives, of which four stems appear, two in the RV. and two in the AV. Roots ending in r always take isya, whereas those ending in other vowels generally take sya.

a. Final vowels and prosodically short medial vowels take Guna, final a and medial a remaining anchanged; e.g. ji conquer: je-sya; ni lead: ne-sya; da give: da-sya; mih shed water: mek-sya; voj join: yok-sya; kṛt cut: kart-sya; dah burn: dhak-sya; banch bind: bhant-sya; bhū be: bhav-iṣya; sṛ flore: sar-iṣya; vṛt furn: vart-iṣya.

- Causatives, which always take toys, retain the present atom, dropping only the final a; thus dharay-toys (dhr support); vasay-toys (vas seer); due-ay-toys (due spoil); varay-toys (vr seer).
- b. The inflaxion of the future is like that of the present of the first conjugation (bhávāmi). Middle forms occur in the sing. only. The forms met with, if made from kr do, would be:

Act. s. 1. kar-işyami. 2. kar-işyasi. 3. kar-işyati.

Du. 2. kar-işyáthas. 3. kar-işyátas. Pl. 1. kar-işyámas, -masí. 2. kar-işyátha. 8. kar-işyánti.

Mid. s. 1. kar-isyé. 2. kar-isyáse. 3. kar-isyáte.

- 1. Only one subjunctive, the 2. s. act. kar-isyae, has been met with in V., and one other, L du. mid., not-syavahai (nud push) in B.
- 2. More than twenty participles occur, of which only four are mid. Examples are:

Act. kar-işy-ûnt, dhak-şy-ûnt (dah); mid. yak-şyû-mana (yaj), stavişyû-mana (stu).

Irregularities.

f. In an bring forth the future atom is formed with unchanged final vowel, which is moreover accented: su-sya; while the medial a of sah is longthened: sāk-ayā.

Periphrastic Future.

152. There is no certain example of this form of the future in the Samhitas. But such a phrase as anv-aganta yajñapatir vo atra (TS., VS.) the sacrificer is following after you here may be an example of its incipient use.

In B. this future is taken by nearly thirty roots. It is made by using the N. s. of an agent noun in tr (180), to which the present of the verb as be is added in the 1. 2. persons, while in the 2. persons dutual pl. the N. du. and pl. appear. The use of this tense-form is

N

The foregrunners in V. of this new tense-formation in B. are the agent nouns in tr which, generally accounted on the root, are used participitally governing an acc, and may be employed predicatively with or without the copula; e. g. data yo vanita magnam (iii, 187) who gives and some beauty.

almost limited to the active, only a few isolated examples being found in the middle. Forms occurring if made from bhú le, would be: Act. sing. 1. bhavitásmi; 3. bhavitá. Pl. 1. bhavitásmas; 3. bhavitásm. Mid. sing. 1. 2. bhavitáso. Pl. 1. bhavitásmahe.

Conditional.

153. This is a past tense of the future meaning would have. Only one example occurs in the Samhitas: á-bhar-ieya-t (RV. ii. 30') was going to bear off. This form is very rare in B. also, except in the SB. where it is found more than fifty times.

Passive.

154. The passive, which takes the terminations of the middle, differs from the latter only in the forms made from the present stem and in the 3. s. nor. From the middle of verbs of the fourth class it differs in accent only: nah-ya-te binds: nah-ya-te is bound.

The stem is formed by adding accented ys to the root, which appears in its weak form.

- Final a mostly becomes i; e.g. da give: di-ya; but it also remains; e.g. jña know; jña-ya.
- Final i and n are lengthened; e.g. ji conquer: ji-ya-te;
 śru hear: śrū-yá-te.
 - 3. Final r becomes ri ; e. g. kr make: kri-yá-te.1
 - 4. Final r becomes ir ; e. g. śr crush : śir-ya-te."
- 5. Roots ending in a consonant preceded by a nasal, lose the nasal; e.g. anj unoint: aj-yá-te; bandh bind: badhyá-te; bhanj brenk: bhaj-yá-te; vanc move erookedly: vacyá-te; śams praise: śas-yá-te.

The only two roots in which r is preceded by two commonants and which form a passive are say area and surressorter. Their passives do not occur in the Samhitas, but in B are found stri-ya-te and smar-ya-te.

^{*} The passive of pr. Mi does not occur in the Samhitas, but in B. it is pur-ya-to (the r being preceded by a labial).

- Roots liable to Samprasarana (17 note 1) take it; e.g. vac speak: uc-yá-te; vad speak: ud-yá-te; vah carry: uh-yá-te; grah ssize: grh-yá-te.
- a. Derivative verbs in aya (causatives) drop the suffix while retaining the strong radical vowel. Only one such stem has been noted in the Samhitas: bhaj-ya-te is coused to share (from bhaj-aya samative of bhaj share).
- a. The forms of the present indicative passive occurring, if made from hū call, would be:

Sing. 1. hū-yé. 2. hū-yá-se. 3. hū-yá-te. Du. 3. hū-yé-te. Pl. 1. hū-yá-mahe. 3. hū-yá-nte.

- b. As regards the moods only two certain subjunctive forms (s. 3. uh-yā-te, bhri-yā-te) and one injunctive (s. 3. sū-ya-ta: sū bring forth) occur. No optative forms occur in the RV. or AV.¹ There are, however, nearly thirty imperative forms occurring in the 2. 3. s. pl. These forms, illustrated by hū call, are: s. 2. hū-yá-sva. 3. hū-yá-tām. Pl. 2. hū-yá-dhvam. 3. hū-yá-ntām.
- c. Of the participle over forty examples occur; e.g. hū-yá-māna being called. Of the imperfect only about eight forms have been noted, occurring only in the 3. s. and pl.: á-hū-ya-ta and á-hū-yanta.

Irregularities.

is, tan strick forms its passive from th: th-yd-to?. Similarly jan beget becomes jh-ya-to as born, which, however, in form belongs to the radically accented fourth class, mri-yd-to dies (\sqrt{mp}) and thri-yd-to (\sqrt{dhr}) is stead/not, while passive in form, are intransitive in sense.

Aorist Passive.

155. Outside the present system the passive has no special finite form except in the 3, sing, acr. This is a peculiar middle form (made from about forty-five roots in

¹ But they are met with in the Brahmanas.

In B. khā-yā-te is formed from khan dig.

the Samhitas) which is used with a predominantly passive meaning. When it is formed from verbs with a neuter sense, like gam go, that sense remains unchanged (as in the past passive participle). It is a S. a ind. in which the augmented root takes the ending i. The characteristic feature of this form is the strengthening of the root as compared with other middle forms; e.g. á-kār-i beside á-kr-i (l. s. mid.). Prosodically short medial i, u, r take Guna, and medial a is normally lengthened; final i, u, r take Vrddhi, while final â interposes a y before the ending. The accent of unaugmented forms is always on the root. Examples are: á-ved-i (vid find), á-bodh-i (budh wake), á-darf-i (drá ser), á-vāc-i (vac speak); á-śrāy-i (śri resori), á-stāv-i (stu praise), á-kār-i (kr do), á-dhā-y-i (dhā put).

More than twenty unaugmented forms are also used injunctively; e.g. śrav-i let be heard.

Irregularities.

c. 1. The medial a is not lengthoused in a jan-i, the unaugmented jan-i (beside jan-i), and a-vah-i.

2. From the denominative stem jaraya play the the unique form jaraya-y-1 tet him be embrased to formed.

PARTICIPLES, GERUNDS, AND INFINITIVE.

I. Active Participles.

156. The stem of the present (except the reduplicating class), the future, and the acrist active participle is formed with the suffix ant. The strong stem may be obtained by dropping the i of the 3. pl. ind. act.; v. g. bhav-ant, kṣip-ant, as-yant; duh-ant, kṛṇy-ant, bhind-ant, pri-ṇant.

About a dozon more are found in B.

³ On the declension of participles in ant sea 85; on the formation of their fam. stome. 05 a.

Stems of the reduplicating class do not distinguish strong forms because they drop the n: e.g. juhv-at (3. pl. juhv-ati).

The strong stem of the future participle may similarly be obtained by dropping the i of the 3. pl. act.: bhavisyant, karisyant.

The active participle is formed by the root agrist, the a agrist, and the s agrist, from the unaugmented tense stem in the latter two; e.g. vidá-nt, sák-ş-ant (sah prevail); and from the weakened or unmodified root in the former; e.g. páh-ánt, kr-ánt (kr make), gm-ánt (gam go), pánt (pā drink).

a. Irrogularities.—In the pres, part, the initial a of as to and the medial a of han stop are lost; saint (3. pl. saint), ghn-ant (3. pl. ghn-anti); while the n of the suffix is lost in das-at sure hyprogund ads-at (3. pl. sas-ati). The n is also lost in the a sor, part, of dah hows; daky-at and dhake-at. Whether it was also best in saky-at, the part, of the same sor, from sah preced, is uncertain because it is only mut with in a weak case.

157. The reduplicated perfect participle is formed from the weak (but uncontracted or unsyncopated) stem to which the suffix vams is directly added. There are more than fifty such stems. Examples are: cakr-vams, jagan-vams (gam go), tastabh-vams (stambh prop), tasthi-vams (athā stand), dadṛś-vams, dad-vams (dā gire), ba-bhū-vams, vavṛr-vams, sasa-vams (san gain), suṣup-vams (svap steep).

a. Some half-dozen of these participles are formed by adding the suffix with connecting I to the reduplicated stem contracted to a single syllable; I-y-i-vāms (i 90); ūs-i-vāms (vas dwell); ok-i-vāms (no be pleased); papt-i-vāms (pat fall); sašc-i-vāms (sac follow); in the later Samhitās also

³ Both das and sas belong to the root, and not the reduplicating class.

With strong radical vowel and reversion to the original guttural.

jaks-i-vams (ghas cat). The only certain example of a perf. part, adding the suffix with connecting i to the fully reduplicated stem is vivis-i-vams (TS.).

b. A few perfect participles are formed by attaching vams to the unreduplicated stem: das-vams conshipping, vid-vams knowing, sah-vams premiling, and perhaps khid-vams apprexing. Similarly formed is migh-vams bountiful, though the root does not occur in independent use. Three unreduplicated roots take connecting i in the later Samhitas: das-i-vams (SV.) conshipping, vis-i-vams (AV.) contening, varj-i-vams (AV.) having twisted.

e. Irregularities.—In seven stems the palatal reverts to the original guttural; cikit-vāms (√cit), jigi-vāms (√ji), ririk-vāms (√ric), ruruk-vāms (√ruc), vivik-vāms (√uc), sašuk-vāms (√suc), ok-i-vāms (√uc). The radical vowel is strong in dadā-vāms (AV.), ok-i-vāms, sāh-vāms; while the reduplicative vowel is long in sāsah-vāms and šūšu-vāms (√sū).

II. Middle and Passive Participles.

158. The participles of the future middle, of the present passive, and the present middle of the a conjugation are formed by adding the suffix mana to the stem (which always ends in a); e.g. fut. mid. yaksya-mana (/ yaj); pres. pass. kriya-mana (/ kr); pres. mid. yaja-mana.

a. Verbe of the second conjugation add the suffix and to the weak stem in the pres. mid.; e.g. bruv-āņā (√brū), jūhv-āna (√hu), rundh-ānā (√rudh), kṛṇv-ānā (√kṛ), pun-ānā (√pū).

a. There are several irregularities in the formation of the middle participles of the root class. 1. The root is at optionally takes the anomalous suffix ins; &s-ins beside as-ana. 2. The final of the root

[|] jake symbopated for jagh(a)s.

In B. are also found dadys-i-vanus and cichid-i-vama.

² Occurring only in the voc. khidvas.

^{*} Presupposed by the fem, varjust.

dun mak optionally reverts to the original guttural: dugh-ana boside the regular duh-ana. 5. A few roots take Guna: ob-ana (vuh), yodh-ana (vuh), say-ana (vi), atav-ana (vetu). 4. Several of these participles optionally accent the radical syllable instead of the final yould of the suffix; e.g. wid-ana boside wid-ana.

159. The Perfect Middle Participle is formed by adding the suffix -and to the weak form of the stem as it appears before the ending of the 3. pl. mid. re (ire, rire). It is common, more than eighty examples occurring. The following are some of them: ānaj-ānā (<anj), ānaś-ānā (<ampa), ār-āṇā (<raf), ij-ānā (</anj), ūc-ānā (</anj), ānaś-ānā (<ampa), ār-āṇā (</ar>
(rip.ana (rip.ana (<a href="https://rip.ana") (rip.ana (<a

c. Irregularities.—I. This participle of \$\tilde{a}\$ is the double anomaly of reduplicating with a and of atrengthening the radical syllable: 1 \$\tilde{a}\$ \$\tilde{a}\$ \$\tilde{a}\$ and \$\tilde{a}\$ are reduplicated as well as to a contracted stem: 1 \$\tilde{a}\$ \$\tild

160. The Perfect Passive Participle is formed by adding, in the great unifority of instances, the suffix to (with or without connecting i) or, far less commonly, the suffix no idirectly) to the root.

Cp. a similar irregularity of \$i in 184, 1 b.

Also normally, but less frequently, accented totul-and.

² Cp. the Ck. perf. mid. part. sread-pire-t.

The first three cannot be accounted intensives because they have not the intensive reduplicative vowel (173, 2). Though the reduplicative vowel of sidest-kna may be that of either perfect or intensive, the consurrance of the perf form saiddur beside it favours the view that it is a perf. participle.

1. ná, which is taken by primary verbs only, is attached to the (unweakened) root, which ends in a long vowel or one of the consonants d and (rarely) c or j. Before this suffix, ī and ū remain unchanged; ā remains or is reduced to ī or i; ī becomes īr or (generally when a labial procedes) ūr; d is assimilated to n; c and j revert to the original guttural. Thus if eling: lī-nā; dū burn: dū-nā; drā sleep: drā-nā; dā divide: di-nā; hā leave: hī-nā; gī swallow: gīr-nā; mṛ crush: mūr-nā; jī waste away: jūr-nā; bhīd splīt: bhīn-nā; skand leap: skan-nā; vraśe cut up: vṛk-nā; ruj break: rug-nā.

a. Several roots take alternative forms in ta; nun-na and nut-ta (vnud); vin-na and vit-ta (vid /bul); san-na and sat-ta (ead wl); si-na and si-ta (sya coopulate); pf fill; pur-na and pur-ta; af creat: sir-na and sur-ta; pro min; -pro-na and prk-ta.

 The final paintal of pre sure, wrase cut up and ruj break reverts to the guttural (op. 169, 1).

2. When tá is added direct the root tends to appear in its weak form: verbs liable to Samprasarana take it; a medial or final nasal is lost; ā is often reduced to ī or ī; yā sometimes to ī. Examples are: yū-tá, ji-tā, bhī-tā, stu-tá, hū-tā, kṛ-tā; naṣ-ṭā (√naṣ be lost), sik-tā (√sic), yuk-tā (√yuj), gū-ḍhā (√guh), dug-dhā (√duh), sṛṣ-ṭā (√sṛj); iṣ-ṭā (√yaj), vid-dhā (√yyadh), uk-tā (√vac), ū-ḍhā (√yah), sup-tā (√svap), pṛṣ-ṭā (√prach); ak-tā (√añj), ta-tā (√tan), ga-tā (√gam); pī-tā (pā drink), sthi-tā (√sthā); vī-tā (√yyā).

s. The root dha par is doubly weakened in hi-ti beside -dhi-ta. Medial a is reduced to i in sig-ta (sas order). Syncopation and loss of support in -g-dha suten (ghas).

 Excepting the occurrence of the normal form -data in the compound twa-data given by thee, da give regularly uses the weak pres-

With cerebralization and aspiration of the suffix, less of the radical final and lengthening of the radical wowel (ep. 62, 69 c).

With the same changes as in guidha after van-ta has been reduced by Samprasarana to un-ta. Cp. p. 170, note 7.

atem dad in forming its past passive participle: dat-14. The latter is further reduced to -tta in deva-14 gives by the gods, and when combined with certain propositions: vy-f-tta genel, part-tta gene accept pretti-tta gives back. The same syncopation appears in the compound participle of da divide: ave-tta cut off.

e. One root In an and three or four in am retain the must and tengthen the vowel; dhvan sound; dhvan-ta; kram stride; kran-ta; sam be quid; san-ta; sram be weary; sran-ta; dham blos has the

irrogular dhma-td and dham-i-ta.

d. A few roots in an have a to khan dig : khā-tā; jan še born : jā-tā; van tene (-vā-ta ; san gain : sā-tā.

3. i-ta is taken by a considerable number of roots ending not only in conjunct consonants or in single consonants difficult to combine with t, but also in simple consonants, especially sibilants, which present no such difficulty. The root is not weakened (excepting four instances of Samprasāraṇa). Secondary verbs (almost without exception causatives)* take ita exclusively (after dropping aya).*

Examples are: nind-itá, rakṣ-itá; grath-itá, îļ-itá, car-itá, jīv-itá; pat-itá, pan-itá; kup-itá, stabh-itá; muṣ-itá; arp-itá' (arp-áya cause to go), cod-itá (cod-áya set in motion).

a. The roots taking Samprasarana are: grabh and grah seize: grbh-ĭ-tá and grh-ĭ-tá (AV.);³ vakş increase: ukṣ-itá; vad speak: ud-itá; śrath slacken: śṛth-itá.

161. There is once found in the AV. a perfect passive participle extended with the possessive suffix vant, which gives it the sense of a perfect participle active: asita-vant having eaten."

' Representing the long sonant masal.

³ Only one perfect participle passive has been noted from a desiderative: mimām-s-lid called in question, and one from a denominative; bhām-itā saraged.

In B. jūspaya, caneative of jūš know, forms its part, without connecting 1: Hap-t4.

^{*} Usually (and abnormally) accented arp-ita.

With I for i as in some other forms from this root.

^{*} This type of participle hardly occurs even in the Brahmanas.

- 162. The Puture Passive Participle is in the RV. formed with four suffixes: one with the primary suffix ya, which is common, the rest with the secondary suffixes ay-ya, en-ya, and tv-s, each of which occurs about a dozen times. In the AV. there begin to be used two other gerundives, formed with tavya and aniya, each occurring twice. All these participles correspond in sense to the Lat. gerundive in -ndus.
- In the RV. about forty examples of the gerundive in ya occur, and about twenty more in the AV. The suffix is nearly always to be read as in, which accounts for the treatment before it of final radical vowels. The root, being accented, appears in a strong form excepting a few examples which have the short radical vowel i, u, or r.
- 4. Final a coalesces with the initial of la to e, between which and the following a a phonetic y la interposed: dague: dóya (= då-i-y-a) to be press.
- b. Final I, ü, r regularly take Guna or Vyddhi, the final element of which always appears as y, v, r, as before a vowel; a.g. II chap: -lay-ya; nu praise: náv-ya; bhit be: bháv-ya and bhāv-yā fatere; hū call: háv-ya; vy choos: vár-ya.
- c. Modial i, u, z, if followed by a single consonant, may take Guna and a may be lengthened; e, g, dvis: dves-ya bateful; yudh: yodh-ya to be modiaed; rdh: ardh-ya to be accomplished; mri: marj-ya to be purified; vac: vac-ya to be smid; but also grih-ya to be concouled; -dhrs-ya to be smalled; -sad-ya to be smalled.
- A final short vowel sometimes remains unchanged, a t being than interpresel; i-t-ya is to gone; arti-t-ya to be heard; -kr-t-ya to be build; markf-t-ya to be proceed.
- 2. The suffix ayya, nearly always to be read ayia, is almost restricted to the RV.; e.g. pan-ayya to be admired; vid-ayya to be found; arav-ayya glorious. It is sometimes attached to secondary stems; to a causative; panay-ayya admirable, sprhay-ayya desirable; to a desiderative; didhi-s-ayya to be conciliated (√dhā); to an intensive; vi-tantas-ayya to be hastened.
 - 3. énya (generally to be read énia) is attached to the root,

which remains unaltered except when it ends in a vowel; thus dvis-énya malignant, yudh-énya to be combatted, dré-énya morthy to be seen; but vár-enya choicemorthy (vr choose). It is once added to an aor. stem: yam-s-énya to be guided (/yam). Secondary verbs also take this suffix; desideratives: didrks-énya worthy to be seen, susrus-énya deserving to be heard; intensives: marmrj-énya to be glorified, vávrdh-énya to be glorified; denominatives: sapar-énya to be glorified.

- 4. tv-a, almost restricted to the RV.¹ and generally to be read tua, is added to the strong form of the root, which is accented. Thus kár-tva to be nude, hé-tva to be driven on (√hi), só-tva to be pressed (√su), vák-tva to be said; with connecting i: sán-i-tva to be non; with connecting i: bháv-i-tva² future.
- 5. The only two examples in V. (both occurring in AV.) of the gerundive in tavyà, which in both cases is added with connecting i, are jan-i-tavyà to be born and hims-i-tavyà to be injured.*
- 6. The only examples of the gerundive in aniya (both appearing in the AV.) are upa-jiv-aniya to be subsisted on and a-mantr-aniya worthy to be addressed.

III. Gerund or Indeclinable Participle.

163. More than 120 examples of the gerund occur in the RV, and AV. It expresses an action which accompanies or more often precedes that of the finite verb. It is formed with the three suffixes tvi, två, tvåya (all old cases of stems

A few examples occur in the Brähmanas; jó-tva (ji compar), sná-tva (sná čotke), hán-tva (han siny).

[&]quot; With I instead of i.

This gerundlye has become not uncommon in B., where it is formed not only from the root, but from secondary stems.

^{*} In B, nearly a dozen examples have been met with.

in tu which is also used to form infinitives) situched to the simple root.

1. The form in tvi, which is almost restricted to the RV. I is the commonest of the three in that Samhita, where fifteen examples occur. It probably represents an old locative of atems in tu. It is as a rule added directly to the root, which has the same form as in the perf. pass. participle in ta. Examples are: kṛ-tvi having made, ga-tvi having gone, gù-dhvi having hidden, bhù-tvi having become, vṛk-tvi having overfhrown (√vṛi), hi-tvi having abandoned (√hà). There are two forms in which the suffix is added with the connecting vowel i: jan-i-tvi having produced and skabh-i-tvi having proqued.

2. The suffix tv-a (an old inst. sing. of a verbal noun in tu) is taken by nine roots in the RV, and about thirty more in the AV. The root has the same form as before the ta of the perf. pass, participle. The forms occurring in the RV, are: pi-tva (på drink), bhit-tva having shatlered, bhū-tva having become, mi-tvn having formed (/ ma), yak-tva having yoked, vr-tva having covered, bru-tva having heard, ha-tva having slain, hi-rva having abandoned. Some of the forms from the AV. are: is-tva having sacrificed (vaj), jag-dhva having devoured (Vjaks), tir-två having crossed (Vtr), tr-dhvå having shattered (/ trh), dat-två having often (/ da), pak-två having cooked (pao), bad-dhya having bound (bandh), bhak-två having divided (/ bhaj), ru-dhvå having ascended (ruh), vrs-tva having cut up (vrase), sup-tva having slept (vsvap); three take the connecting vowel i: cay-i-tva nating (v'ely), hims-i-två having injured, grh-i-två having seized; a few also are formed from secondary stems in aya (which is retained); e.g. kaipay-i-tva having arranged.

3. The carest gorund is that in tvays, which is formed

¹ This gernad is not found in the AV., but it has not entirely disappeared in the Brahmanas.

from only eight roots in the RV.1; ga-tvåya having gone, jag-dhvåya having devoured, dat-tvåya kaving given, dre-tvåya having seen, bhak-tvåya having attained, yuk-tvåya having voked, ha-tvåya having slain, hi-tvåya having abandoned; three more of these gerunds appear in the Yajurveda: kr-tvåya having done, ta-tvåya having stretched, vr-tvåya having covered.

- 164. When the verb is compounded the suffix is regularly either ya or tya. In at least two-thirds of such forms the vowel of the suffix is long in the RV. The root is always accented.
- I. ya is added (but never with i) to the root, which has the same form as before tva, except that final a and am remain unchanged, Nearly forty roots in the RV, and about thirty more in the AV. form these compound gerunds. Examples from the RV. are: ac-ya bending (= a-ac-), abbyúp-ya having enveloped (vap), abhi-krám-ya approaching, abhi-gur-ya graciously accepting (gr sing), sam-gfbh-ya guthering, ni-cay-ya fearing, vi-tur-ya driving forth (tr). ā-dā-ya taking, ati-div-ya playing higher, anu-dfs-ya looking along, å-råbh-ya græping, ni-såd-yå having sat down; from n causative stem : prarp-ya selting in motion (pra-arpaya). Examples from the AV. are: ud-uh-ya having corried up (/vah), sam-gir-ya swallowing up (/gr), upa-fiad-ya putting in (da), sam-bhu-ya combining, ut-tha-ya arising (Vstha), sam-siv-ya having secred; from a causative stem; vi-bhaj-ya having apportioned (/ bhaj).
- o. Three roots are found in the RV. compounded with adverbs or antistantives; punar-da-ya graing back, miths-appidn-ya saing together, karpa-gfb-ya scieing by the car, padz-gfb-ya grouping by the hand.

This gorund occurs twice in the AV, and about half a dozen times in B. It is ence formed from a causative stem in the SB; spās-ay-i-tvāya (√spas).

- 165. 2. tyň (nearly always with long vowel in the RV.) is added instead of yň to compound verbs ending in a short vowel; e.g. é-tyň having come (á-i), abhi-ji-tyn having conquered, ă-dṛ-tyň regarding, apa-mi-tyn having borrowed, upa-śrú-tyn having overheard; with adverbial or nominal prefix: aram-kṛ-tyň having made ready, akhkhalī-kṛ-tyn shouting, namas-kṛ-tyn (AV.) paying homage.
- a. The analogy of these verbs is followed by some roots ending in n or m preceded by a, which drop the massl as in the perf. pass; part. : ri-hā-tyā ācresg driven energ (vhan), ā-gā-tyā ācresg cons (vgam), ud-yā-tyā (AV.) lifting up (vyam).
- 166. The accusative in am of certain verbal nouns, though not yet construed like a gerund in the Samhitäs, is not infrequently so construed in the Brāhmaṇas and Sūtras. Before the suffix, the root (which is almost always compounded) appears in the form it assumes before the i of the 3. s. sor. pass. (155); e.g. śākhāṃ sam-ā-lāmbh-am taking hold of a branch (SB.); mahānāgām abhi-saṃ-sār-am running together around a great snake (SB.).

IV. Infinitive.

167. The infinitive, all the forms of which are old cases of verbal nouns, acc., dat., abl.-gen., or loc., is very frequent, occurring about 700 times in the RV. Only the sec. and dat. forms are common, but the datives outnumber the acc. in the proportion of 12 to 1 in the RV. and 3 to 1 in the AV. It is a remarkable fact that the infinitive in turn, the only form surviving in Sanskrit, occurs not more than five times in the RV., while the dative infinitive, which in the RV. is more than seven times as common as all the rest put together, has already for the most part disappeared in the Brahmanas.

¹ Sometimes not original but reduced from a long yowel.

¹ Here mi la reduced from ma menure.

a. The infinitive is as a rule formed from the root, not being connected with any tense stems or ever showing the distinctions of votes. The forms in dhysi, see and sain are, however, not infrequently connected with a present stem; that in dhysi is ones formed from a perfect stem; and is also in several instances taken by causative stems. The forms in dhysi and tavái are at once recognizable as infinitives by their abnormal endings; that in sant, though it has an ordinary case-ending, by its isolated stem-formation. The acc, infinition and am and the shi gas, inf. show their infinitive character by their power of combining with prepositions and their verbal construction. Some infinitives, however, cannot be distinguished from ordinary cases of verbal nouns; they are not to be regarded as ganuine infinitives unless they are isolated case forms or have a verbal construction.

L Dative Infinitive.

This infinitive ands in e, which with the final a of a root or stem combines to ai. It is formed from:

a. roots, about sixty forms occurring. About a dozen are formed from roots ending in long vowels and from one in i. all of them (except an alternative form of bhū) being compounded with prefixes; e.g. parā-dái to gire up, pra-hyò to send (\sqrt{hi}); -miy-e to diminish (\sqrt{mi}), -bhy-é and bhuy-é to be; -tir-e to cross.

The rest are from roots ending in consonants. About a dozen are uncompounded, as mah-é to be glad, mih-é to shed water, bhuj-é to enjoy, drá-é to sec. But the compounded forms are commoner; e.g.-grábh-e to seize, -idh-e to kindle, -núd-e to thrust, -přeh-e to ask, -vác-e to speak, -vidh-e to pierce, -syád-e to flow.

The only dat inf. in ordinary use in It is that in tavái. Otherwise only five or six in a (see note 6); two in tava, av-1-tave and startave, and one in dhyai, sa-dhyai to compact (such) have been noted in B. Loc. infinitives have disappeared.

² Except stad-dhe to wast and pra-me to form, which drop the a."

With Samprasarana.

^{*} With longthened yowel.

[&]quot; With loss of must (wayand).

In B. have been noted half a dozen infinitives in a from roots

- b. verbal nouns derived with nine different suffixes. These in the aggregate are more numerous.
- 1. Some twenty-five are datives of stems in as; e.g. ay-as-e to go, caks-as-e to see, car-as-e to fare, pusy-as-e to thrive, bhiy-as-e to fear, sriy-as-e to be resplendent.
- 2. Five or six datives of stems in i are found in the RV., and one or two in other Samhitas; tuj-aye to breed, drá-ay-e to see, mah-ay-e to rejoice, yudh-ay-e to fight, san-ay-e to win; grh-aye to soize (K.), cit-aye to understand (VS.).
- 8. Four or five are datives of stems in ti: is-tay-e to refresh, pi-tay-e to drink, vi-tay-e to enjou, sa-tay-e to win.
- 4. More than thirty are datives of stems in tu ' (added to the gunsted root, sometimes with connecting i); e.g. at-tav-e to eat, 6-tav-s to go, 6-tav-s to weare (\sqrt{u} = v\hat{n}), kar-tav-e to make, gan-tav-e to go, ph-tav-e to drink, bhar-tav-e to bear away, yas-tav-a to sucrifice, vak-tav-e to speak, vas-tav-e to shine, vo-lhav-e to convey (\sqrt{vah}); av-i-tav-e to refresh, car-i-tav-e to fare, sav-i-tav-e to bring forth (\sqrt{u}), arav-i-tav-e to flow (\sqrt{sru}), hav-i-tav-e to call (\sqrt{h}\hat{u}); jiv-a-tav-e to live, star-i-tav-e (AV.) to lay low (\sqrt{str}).
- 5. More than a dozen are datives of stems in tavá (which is added like to to the gunsted root) and have the peculiarity of being doubly accented; e.g. é-tavái to go, ó-tavái to weave, gán-tavái to go, på-tavái to drink, mán-tavái to think, sár-tavái to flow; yám-i-tavái to guide, sráv-i-tavái to flow.

ending in consonants, all but one being compounded : drs-6 (TS.) to see, prati-dhfs-e to williams (TS.), pra-mrad-8 to cross (SB.), 4-rabh-e to licks hold (SB.), 5-rad-e to sit upon (AB.), att-afp-e to glide over (MS.). All these except pra-mrad-8 occur in the RV.

⁴ Which is generally secented, but about half a dezan examples accent the root.

The only examples of this infinitive noted in B, are avitave and startave.

e. This infinitive is still in regular use in B., where the following examples have been noted: étavál and rátavál le go, kártavál to sto, dódiritavál to figuresay, drógethavál to plot, mántavál to think, mánthitavál to rule, stártavál to bay lose, áti-caritavál to transperse, å-netavál to bring, nír-asinvál to throse out, pári-ataritavál to objet around, sám-hvayitavál to coll ingelber.

6. There is only one certain example of a dative infinitive

from a stem in tya: i-tyái lo go,

- 7. More than thirty-five are datives (almost restricted to the RV.) of stems in dhyā, which is added to verbal stems ending in a (generally accented); e. g. iyá-dhyai to go (√i), gáma-dhyai to go, cará-dhyai to fore, šayá-dhyai to tie (√šī), stavá-dhyai to proise (√stu); pibá-dhyai to drink (√pā), prṇá-dhyai to fill (√pī), huvá-dhyai to call (√hū); vāvṛdhá-dhyai to strengthen; nāśayá-dhyai to cause to disappear, vartayá-dhyai to cause to turn.
- a. Only one of these infinitives has been noted in B.: sachyat to conguer (√sah). In the TS, occurs one example ending in a instead of at: gama-dhya to go.
- Five are datives of stems in man: tra-man-e to protect, da-man-e to give (Gk. δόμεν-αι), dhar-man-e to support, bhar-man-e to preserve, vid-man-e (Gk. ιδ. μεν-αι) to know.
- Three are datives of stems in van: tur-van-e to overcome (√tr), dā-van-e (Gk. δοθναι = δόξεναι) to give, dhurvan-e* to injure.

2. Accusative Infinitive.

This infinitive is formed in two ways.

a. One of them (of which more than a dozen examples occur in the RV. besides several others in the AV.) is made with am added to the weak form of the root, which nearly

2 From the reduplicated perfect stem.

¹ The last three are made from regular present stems.

³ From the causative stem, from which about ten such infinitives are formed.

^{*} With interchange of rowel and santisewel : fir = vr. Op. 171, 2,

always ends în a consonant (except dhā, mī, tř); e.g. sam-idh-am to kindle, sam-pfeh-am to usk, ä-rábh-am to reach, à-ráb-am to mount, šábh-am to shine; pra-tir-am to prolong (vtř), prati-dhā-m to place upon, pra-míy-am to neglect (vmī);

b. The second form which is made from stems in tu (= Lat. supine) is much less common than the datives from the same stems. Only five examples occur in the RV. and about as many others in the AV.; RV.: 6-tum to recee, distum to give (Lat. da-tum), prás-tum to ask, prá-bhar-tum to present, anu-prá-volhum to advance; AV.: át-tum to cat, kár-tum to make, drás-tum to see, yác-i-tum to ask, spárdh-i-tum to contend with; K., VS.: khán-i-tum to dig.

e. The acc. inf. has become nearly twice as frequent as the dat, in B. The form in am is not unusual, while that in turn is quite common.

3. Ablative-Genitive Infinitive.

This infinitive is rare, fewer than twenty examples occurring in the Samhitas. It is rather of the nature of a verbal noun than a genuine infinitive. Like the acc, infinitive it is formed in two ways: from a radical (consonant) stem and from a verbal noun in tu. It thus ends either in as or tos; and as each of these endings represents both the abl. and the gen., the cases can only be distinguished syntactically.

a. The as form has the abl. sense almost exclusively. There are six examples of it in the RV.: a-tfd-as being pierced, ava-pad-as falling down, sam-pfc-as coming in contact, ubhi-śris-as binding, abhi-śvas-as blowing, ati-şkad-as leaping across. There seems to be one certain example of the gen.: ni-miş-as to wink.

b. Of the tos form the RV. has six examples in the abl. sense: é-tos and gán-tos going, ján-i-tos being born, ni-dhā-tos putting down, šár-i-tos being shatlered, só-tos pressing, hán-tos being struck. Three examples in the gensense are: kár-tos doing, dâ-tos giving, yó-tos warding off.

u. The abl. grm, inf. has become as common as the dat, in B.

4. Locative Infinitive.

This form of the infinitive is rare; hardly more than a dozen examples occur even if several doubtful forms are included.

- a. Five or six are locatives of radical stems: vy-us-1 at the dawning, sam-caks-i on beholding, drś-i and sam-drś-i on seeing, budh-i at the waking. As these forms, however, have nothing distinctive of the infinitive and govern the genitive only, they are rather to be regarded as ordinary locatives of verbal nouns.
- b. From a stem in tar are formed dhar-tár-i to support and vi-dhartár-i to bestow; it is, however, doubtful whether these forms are genuine infinitives.
- c. The RV. has eight locatives from stems in san, with a genuine infinitive sense: ne-san-i to lead, par-san-i to pass, abhi-bhū-san-i to aid, śū-san-i to swell, sak-san-i to abide (sac); with connecting i: tar-i-san-i; from present stems: gr-ni-sani to sing, str-ni-san-i to spread.

DERIVATIVE VERBS.

I. Causatives.

168. This is by far the commonest of the secondary conjugations, being formed from more than two hundred roots in the Samhitas and from about a hundred additional ones in the Brahmanas. Of about 150 causative stems in the RV, however, at least one-third have not a causative, but an iterative sense. The whole formation may indeed originally have had an iterative meaning. This perhaps explains how an iterative formation, the reduplicated acrist, specially attached itself to the causative. The same root occasionally forms both the iterative and the causative, as pat-aya-ti flies about and pat-aya-ti causes to fly beside the simple verb pata-ti flies.

The causative is formed by adding the suffix aya to the

root, which is usually strengthened.

 Initial or medial i, u, r, } (if not long by position) take Gupa; e.g. vid know: ved-áya cause to know; krudh be angry: krodh-áya enrage; rā dissolve (intr.): ard-áya destroy; trp be pleased: tarp-áya delight; kļp be adapted: kalp-áya arrange.

 a. Several roots, mostly lacking the causative meaning, leave the radical vowel unchanged; e.g. ruc shine: ruc-áya,

id. (but roc-aya illumino).

b. Initial or medial a (if not long by position) is longthened in about thirty roots; e.g. am be injurious: am-aya suffer injury; nus be lost; nuss-aya destroy.

a. In the following roots the a optionally remains short in the causative: gam go, das suste many, divan disappear, pat fig. mad is estillarated, ram root; thus put fig: put-fixe fig aleast, once cause to fly, and put-fixe cause to fly.

6. In about twenty-five mosts the a always remains short, the causative meaning being mostly abount; e.g. dam contest; dam-aya-

id.; jan begett jan-aya id.

- c. Final i, ü, r take Guna or Vrddhi; e.g. kşi possess; kşay-áya cause to dwell securely; eyu waver: eyav-áya shake; bhü be: bhāv-áya cause to become; ghr drip: ghār-áya cause to drip; śru hear, jr waste away, and sr flow have Guna as well as Vrddhi: śrav-áya and śrāv-áya cause to hear; jar-áya and jār-áya wear out, sar-áya and sār-áya cause to flow; dr pierce has Guna only: dar-áya shatter.
- d. Roots ending in a add páya; e. g. dha put: dha-páya cause to put.
- c. The causative retains the suffix throughout the conjugation even outside the present system. Its inflexion is identical with that of the primary verbs of the first conju-

¹ The only example of a causalive from a root in final i (except the irregular japaya from it conger and arapaya from are resert).

As to other roots taking paya see 'Irregularities', ".

gation(132). Subjunctive, imperative, impuritive, imperfect, and present participle forms are common; but the optative is very rare in the active and does not occur at all in the middle. Only four future forms occur in the RV, and the AV,: dūṣay-iṣyāmi I shall spoil, dhāray-iṣyāti will support, vāsay-iṣyāse thou wilt adorn thyself, vāray-iṣyāte will shield. In the perfect only one periphrastic form (139, 9 a) occurs; gamayām cakāra (AV). Reduplicated acrist forms are connected with only six cansative stems (p. 175, a. 8). There are also three iṣ acrists formed from the causative stem; vyathay-īs from vyath-āya disturb; ailay-īt from il-āya quiet down; dhvanay-īt from dhvan-āya eneclope.

f. Of nominal derivatives the following are examples: a pres. pass. part. bhāj-yā-māna; a few perf. pass. participles: ghār-i-tā smeared, cod-i-tā impelled, veš-i-tā caused to enter; a few gerundives in āyya (162, 2): trayay-āyya to be guarded; panay-āyya admirable; spṛhay-āyya desirable; ten infinitives in dhyai: nāšayā-dhyai to destroy, &c. (p. 193, 7); four gerunds in the AV.: arpay-i-tvā having delivered up, kalpay-i-tvā having arranged, sāday-i-tvā having

set down, srumsay-i-två letting fall.

Irregularities.

 Three canaatives in the AV, shorten the a before paya: jila-paya comes to heave, ára-paya scok, ama-paya bothe beside and-paya (RV.);

2. Pour roots in vowels other than a, that is, in r or i, take paya; r go: ar-paya comes in go; kai deal; kao paya some to deal! (boside

The 2, a, in the occurs in both V, and B.; and from vy seer occurs the unique 2, pl, váraya-dhvát in K.

a In B. such forms are still uncommon except in the SB., where they are numerous.

* In B. desideratives are formed from about a dozen cansative stems; e.g. di-drapay-iea derive to come to run.

¹ The only du, mid, form occurring is 3, madéyaite; and the only mid, form in at (except 1, du.) in the RV, is madayadhvai.

kany-aya); il conquer and ari recorf substitute a for i: ja-paya couse to conquer, ara-paya raise,

S The root bhi fear forms the quite anomalous causative stem bhi-a-aya frequen.

4. The roots ph drink and pyn seed add syn with interposed y:
phy-fyn cause in drink and pyny-fyn #il up. This is probably to be
explained by the assumption that the original form of these roots was
put and pynt.

5. The rowel of grabh grasp is weakened by Samprasarana; grabh-sya grasp; white that of dua grad is longthened; dua-sya, id. The root profile, owing to its initial labial, forms its causative with medial 0 for a: pur-sya fills.

II. Desideratives.

169. The desiderative, which is the least common of the secondary conjugations, is formed from the root with an accented reduplicative syllable and the suffix sa. This sa is never added with a connecting i in the RV., nor, with the single exception of pi-pat-i-sa, in the AV., ji-jiv-i-sa in the VS., and ji-gam-i-sa in the TS.* The desiderative is formed from fewer than sixty roots in the Samhitas and from more than thirty additional ones in B. It is inflected like verbs of the first conjugation (182).

The accent being on the reduplicative syllable, the root as a rule remains unchanged; e.g. dā give: di-dā-sa desire to give; bhid cleave: bi-bhit-sa; nī lead: nī-nī-ṣa; guh hide: jū-guk-ṣa (62 a, 69 a); bhū be; bū-bhū-ṣa; dṛá see; di-dṛk-ṣa. But

 final i and u are lengthened, and r becomes ir; e.g. ji conquer: ji-gi-şa; kru hear: śū-śrū-şa; kr make: cikir-şa.

2. final a is in three roots reduced (cp. 171, 3) to I and in

In R the root rah rise, even though ending in a consonant, takes paya after dropping its h: ro-paya raise (beside roh-sya).

In B. about a dezen other roots form their desiderative stem thus; e.g. ci-kram-i-sa, li-grah-i-sa, vi-vid-i-sa (vid i-sa), &c.

one to i : gā go : ji-gī-ṣa (SV.) ; pā drink : pi-pī-ṣa (beside pi-pā-sa) ; hā go forth : ji-hī-ṣa ; dhā put : dí-dhi-ṣa (beside dhit-sa).

Special Rule of Reduplication.

170. The characteristic reduplicative vowel is i, which appears in all stems except those formed from roots containing û (which reduplicate with u); e.g. jyā overpower: ji-jyā-sa; miś mix: mi-mik-şa; prī low: pi-pri-şa; vrt turn: vi-vrt-sa; but guh hide: jû-guk-şa; bhû be: bû-bhû-şa.

Irregularities.

171. 1. Five roots with medial a followed by m or n lengthen the vowel: gam 90: ji-gām-sa; han suds: ji-ghām-sa (66 A 2); man thick lengthens the reduplicative vowel also: mi-mām-sa (66 A 2); wan sea and san pula drop the massl: vi-vā-sa and si-sā-sa.

2. dhyr misre, after interchange of semiyowel and vowel to ur,

lengthens its n : du-dhur-su. Cp. p. 196, note 4.

- B. Half a dozen roots containing a or a shorten the radical syllable by a kind of syncopation: da girs and dha put less their vowel: di-t-sa (= di-d[a]-sa) beside di-da-sa; dhi-t-sa (= di-dh[a]-sa) beside di-dhi-ga; dabh harm, labh toke, sak br olde, sah preceil lose their initial radical consonant and their vowel: di-p-sa ! (= di[da]bh-sa), lip-sa ! (= li[la]bh-sa), sik-sa (= si[sa]k-sa), sik-sa, with lengthened reduplicative vowel [= si[sa]k-sa).
- o, ap obtain and pdh thrim (treated as artib) contract the reduplicated I with the radical initial to I: fp-sa (= i-ap-sa) and frt-sa (= i-ardh-sa).
- 4. In ci unde, ait perceire, il conquer, han sloy, the radical initial reverts to the original guttural: ci-kl-sa, ci-klt-sa, li-gi-sa, li-gham-sa.

Also dhipea in B.

Also lipsa in B.

^{*} In B, are similarly formed dhikes (dah term), pitsa (pad 90), ripes (rath group),

- 5, ghas sat changes its final s to \$ (66 B 1): ji-ghat-as (AV.) be langry.
- 6. Three roots resimplicate with a long vowel: tur cross (= tr):
 tú-tur-sa; bādh oppress: bi-bhai-sa; man think: mi-mān-sa. On
 the other hand the resimplicative syllable is reduced in the desiderative of
 Kyaj exercitor and mas attem by loss of the initial consonant: i-yak-sa
 (for yi-yak-sa) and i-mak-sa (for ni-mak-sa). In one form from ap
 obtain the resimplication is dropped altogether: ap-santa.
- a. The two roots with initial vowel as of and edh incress form their desiderative stem with the reduplicative vowel in the second syllable : as-is-i-as (B.) and od-idh-i-as (VS.).

In the inflexion of the desiderative all the moods of the present system, besides the imperfect, are represented, though not fully; and of present participles more than twenty-five examples are met with. The forms occurring, if made from vi-vā-sa desire to win, would be:

Present ind. act. sing. 1. vivāsāmi. 2. vivāsasi. 3. vivāsati. Du. 2. vivāsathas. 3. vivāsatas. Pl. 1. vivāsāmas. 3. vivāsanti.

Mid. sing. 1. vivase. 2. vivasase. 3. vivasate. Pl. 1. vivasamahe. 3. vivasante.

Subj. act. sing. 1. vivāsāni. 3. vivāsāt. Pl. 3. vivāsān. Inj. act. sing. 3. vivāsat. Mid. pl. 3. vivāsanta.

Opt. act. sing. I. vivaseyam. S. vivaset. Pl. I. vivasema. Mid. sing. I. vivaseya.

Impv. act. sing. 2. vivāsa and vivāsatāt. 3. vivāsatu. Du. 2. vivāsatam. 8. vivāsatām. Pl. 2. vivāsata. 3. vivāsantu.

Part. act. vivasant. Mid. vivasamana.

Impf. act. sing. 2 ávivásas. 3. ávivásat. Pl. 3. ávivásan.

¹ With shortening of the radical vowel,

With lengthening of the radical vowel.

a. Ontside the present system only two desiderative verbal forms have been met with, two is acrists in the AV.: 4-cikits-in and fris-in.* Three participial forms have also been noted: the perf. pass. part. mimma-i-ta' and the gerundives didrky-cays worths to be seen and finite-larys worths to be seen the desiderative stem occur in the RV., e.g. lyake-û beishing to carrière. They have the value of a press part. governing a case.

III. Intensives (Frequentatives).

172. These verbs are meant to convey intensification or frequent repetition of the action expressed by the simple root. They are common, being formed from over ninety roots in the Samhitās, and about twenty-five others in the Brahmanas. The formation is restricted to roots with initial consonants, nor is it ever applied to derivative verbs.

The stem, of which a peculiar form of strong reduplication is characteristic, has two forms. The primary type, which in by far the commonest, adds the personal endings immediately to the reduplicated stem (accented on the first syllable in strong forms: App. III. 12 c). It is inflected, in both active and middle, like a verb of the third or reduplicated class (132); e.g. nij wash: 3. sing. né-nek-ti. The secondary form, which is rare, adds accented ya in the same way as the passive (154) to the reduplicated stem. It is conjugated in the middle only, like the passive; e.g. vij tremble; ve-vij-ya-te trembles violently.

In B. periphrastic perfect forms from five or six desiderative stems have been noted.

In B. is norists from half a dozen desiderative stome occur; e.g. aips-it, aips-is-ma, a-jighāms-is, a-mimāms-is-thās. One or two simple and periphrastic futures also occur in B., as titikş-işyato (tij be shorp), didyks-i-tāras (drī ses).

In H. also jijyûş-i-tê (jiv he), dhîkş-i-tê (dah hera), ânêrûş-i-tê

In B. also lips-i-tavya (labb toke), didhyās-i-tavya (dhyā think), jijnās-ya (jāā kasse).

a. The primary intensive optionally inserts i between the root and terminations beginning with consonants. This i is found in the 1, 3, s, ind, act, and the 2, 3, s, impv. and impf. act.; e.g. ind. cákaś-i-mi, cákaś-i-ti; impv. 2, cákaś-i-hi. 3, jóhav-i-tu; impf. 3, á-johav-i-t.

Special Rules of Reduplication.

- 173. 1. Radical i and u are reduplicated with the respective Guna vowels e and o; e.g. dis point: de-dis; nī lead: ne-nī; suc shine: so-suo; nu praise: no-nu; bhū be: bo-bhū.
 - 2. Radical a and r are reduplicated in two ways:
- a. More than a dozen roots with medial å (ending in mutes or sibilants, and one in m) as well as three with final r, reduplicate with å: kåś shine: oñ-kaś; pat fall: pā-pat; gam go: jā-gam; gr wake: jā-gr; dr split: dā-dr; dhr hold: dā-dhr; also cal stir: cā-cal.
- b. All other roots containing r (dr and dhr also alternatively) and those with medial a followed by r, l, or a nasal, reduplicate with ar, al, an or am; e.g. kr commemorate: car-kr and car-kir; kr drag: car-kr; dr split: dar-dr and dar-dir (beside dā-dr); dhr hold: dar-dhr (beside dā-dr); hr be excited: jar-hr; car more: car-car; phar scatter: par-phar; cal stir: cal-cal (beside cā-cal); gam go: jan-gam (beside jā-gam); jambh chew up; jan-jabh; daṃś bite: dan-daś; tan thunder: tam-stan (66 A 2).
- 3. Over twenty roots with final or penultimate masal, p or û, interpose an î (or î if the vowel would be long by position) between the reduplicative syllable and the root; a.g. gam go: gan-i-gam (but gan-i-gm-at); han slay; ghan-i-ghan; krand ery oul; kan-i-krand and kan-i-krad; skand leap: kan-i-skand and can-i-skad; bhr bear; bhar-i-bhr; yrt turn; var-i-yrt; nu praise: nav-i-nu; dhû shake; dav-i-dhy; dyut shine: dav-i-dyut.

Irregularities.

- 174. The radical vowel is shortened in voots with medial a: kas shine: ca-kas; badh oppress: ba-badh; vas tellou: va-vas. In a few roots containing r or r the radical syllable varies; thus gr scallous: lar-gur and jal-gul; car store: car-cur beside car-car; tf cross: tar-tur beside tar-tur.
- a. The root r go reduplicates with al : al-ar (dissimilation); gab plungs, with a meal: jan-gah; badh eggess, with its final muters bad-badh (beside ba-badh); bhr bear and bhur quing, with a palatal; jar-bhr, jar-bhur; bhur and gur good reduplicate u with a : jar-bhur, jar-gur.
- 6. Roots with initial guttural, if interposing I before the root, reduplicate with the same guttural; thus krand on and; kan-i-krand; gam go; gan-i-gam; han (for ghan) slop; ghan-i-ghan; ky woke has both kar-i-kr and car-i-kr; akand loop has both kan-i-skand and can-i-skad.
- A. The forms of the primary type that occur, if made from nij wash, would be the following:
- Pres. ind. act. sing. 1. nénej-mi, nénej-ï-mi. 2. nének-şi. 3. nének-ti, nénej-ï-ti. Du. 2. nenik-thás. 3. nenik-tás. Pl. 1. nenij-más, nenij-mási. 3. nénij-ati.

Mid. sing. 1. nenij-ė. 3. nenik-tė. Du. 3. nenij-āte. Pl. 3. nenij-ate.

Subj. act. sing. I. nénij-ani. 2. nénij-a-s. 3. nénij-a-t. Du. I. nénij-a-va. Pl. I. nénij-a-ma. 3. nénij-a-n.
 Mid. du. 3. nénij-aite. Pl. 3. nénij-a-nta.

¹ In B. also jan-jap-ya-to (jap multer). Here also van corry reduplicates with a (together with interposed 5) though there is no trues of a meal in the root: van-I-vah-yate.

This is the only example of such reduplication.

This root shows the same poculiarity in the perfect (139, 4).

^{*} The intensive of this root occurs only in the participle karikr-at and carikr-at.

^{*} The only form occurring in this person has the interposed I and strong radical syllable; tar-tar-i-thus.

⁶ The only form actually occurring in this person is janghan-and (accented like the subj. of the reduplicating present).

- Opt. No certain forms occur in the RV. and only two active forms in other Samhitas: sing. 3. veviş-yāt (AV.), pl. 1. jā-gṛ-yāma (VS., MS., TS.), jāgṛi-yāma (TS.). The 3. a. mid. nenij-ita occurs in K.
- 4. Impv. About twenty active (but no middle) forms occur. Made from jägr these would be: sing. 2. jägr-hi, jägar-i-hi, jägr-tåt. 3. jägar-tu, jägar-i-tu. Du. 2. jägr-tám. 8. jägr-tám. Pl. 2. jägr-tá...
- 5. Of the participle over forty stems occur, about two-thirds of them being active. Examples are: act. kanikrad-at, cekit-at, janghan-at, jagr-at, dardr-at, nanad-at, roruv-at; mid. jarbhur-ana, dandas-ana, yoyuv-ana (yu join), sarsr-ana.
- 6. Impf. Fewer than thirty forms of this tense occur, only three of them being middle. Examples of the persons occurring are:

Act. sing. 1. á-cākaś-am. 2. á-jāgar. 3. á-dardar, á-var-i-var, á-johav-i-t; dáv-i-dyot, náv-i-no-t. Du. 2. á-dardr-tam. Pl. 1. marmrj-má. 3. á-carkṛṣ-ur, á-dardir-ur, á-nonav-ur.

Mid. sing. 3. á-dedis-ta, á-nan-na-ta, Pl. 3. mármrj-ata.

a. Outside the present system few intensive forms occur. There are four sot. perfect intensives with present sense: sing. I. jägara. ä. jägär-a (jypiyyape), davidhäv-a (dhū shahe), ndnäv-a (nu prese); also dodráv-a (dru rus: TS.), yoyav-a (yu separate: MS.), leláy-a (li le sensondy: MS.). There is besides the perf. part. Jägg-våqus. A causative intensive appears once in the participial form var-i-varj-ayant-i tesition about.

¹ In B. securs the 2 s. mid. form nanik-ave (vnij).

The RV, liss no lupy, forms with interposed 1, but the AV, and VS, have a few in the 2, 3, a, as cakaá-i-hi, johnv-i-tu. A few examples occur in B, also,

From nam axid, with loss of nasal (a = sonant nasal), for a-nan-nan-ta.

In B. also occur the causative stome from intensives jagar-sya and daubar-sya (dhr hold).

B. The forms of the secondary type, which is indistinguishable from a passive in form, number only about a dozen. They occur only in the 2. 3. s. and 3. pl. ind. pres., besides a few participles. They are:

Pres. ind. sing. 2. co-şkû-yá-se (aku tear). 8. dediśyá-te, ne-ni-yá-te, marmṛj-yá-te, rerih-yá-te, vevij-yáte, vevi-yáte (vi enjoy). Pl. 3. tartúr-yánte (√tṛ), marmṛjyánte.

Part. carcūr-yá-māṇa (√car), nenī-yá-māna, marmṛjyá-māna.

IV. Denominatives.

175. These verbs, inflected like those of the a conjugation (132), are derived, almost exclusively with the suffix ya, from nouns, to which they express some such relation as 'be or act like', 'treat as', 'turn into', or 'use as', 'wish for'. More than a hundred denominative stems occur in the RV. and about fifty in the AV.' The suffix is normally accented, but a certain number of undoubted denominatives, such as mantrá-ya utter a prayer, arthá-ya make an object of, desire, have the causative accent, thus forming a connecting link between the regular denominatives and the causatives.

A. Before the suffix ya:

 final i° and u are lengthened; e.g. kavī-yā be wise (kavī), rayī-yā desire wealth (rayī); rjū-yā be straight (rjū); vasū-yā desire wealth (vāsu); šatrū-yā play tho enemy (šātru), be hostile.

 final a usually remains unchanged, but is often lengthened; it is sometimes changed to ī; and even dropped;

I Denominatives are less common in B, ; thus the AB, has hardly twenty, and the SB, about a dozen.

Except ariti-ya act tite un comp, be hostile bosido arati-ya, and jani-ya sek u seje boside jani-ya; gatu-ya sel in motion (gatu).

In the Pads text the i is usually, the ū is always, written short.

e. g. jāra-yā treut like a lover, deva-yā serve the gods, rtā-yā act according to sacred order; nāvā-yā desire horses, rtā-yā observe sacred order (beside rtā-ya), yajāā-yā sacrifice; adhvarī-yā perform the sacrifice (adhvarā), putrī-yā acsire a son (putrā), rathī-yā drive in a car (rātha): adhvar-yā perform sacrifice (beside adhvarī-yā), taviṣ-yā be mighty (taviṣā: beside taviṣī-yā).

- final a remains unchanged; e.g. gopa-yá act as herdsman, protect, prtana-yá fight. Final o, in the only example occurring, becomes av: gav-yá desire cows.
- 4. Consonant stems, the commonest being those in as, nearly always remain unchanged; e.g. bhisaj-yā play the physician. heal; ukṣaṇ-yā act like a bull (ukṣan); vadhar-yā hurl a bolt (vādhar); su-manas-yā be gracious (su-mānas); taruṣ-yā engage in fight (tārus).
- a. A low denominative forms are made without a suffix, direct from nominal stems, but nearly always beside regular denominatives in ye; e.g. bhistk-ti from bhissi and as physician beside bhissi-ye; and the forms tarnee-ma, tarnes-ute, tarnes-ute (from tarnescompared) beside tarne-ye.

Inflexion.

- B. All the tenses, moods, and participles of the present system are represented. If made from names-ya pay homage the forms occurring would be:
- Pres, ind. act. sing. I. namasyámi. 2. namasyási.
 namasyáti. Du. 2. namasyáthas. 3. namasyátas.
 Pl. 1. namasyá-masi, -mas. 2. namasyátha. 3. namasyánti.

Mid. sing. 1. namasyé. 2. namasyáse. 3. namasyáte.

With causative accent.

The Pada text in this and mustly every example has i-yā. Even the Samblia text of the AV, has putri-ya.

⁵ The a may also be dropped i prtan-ya final against.

Du. 2. namasyéthe. 3. namasyéte. Pl. 1. namasyámahe. 3. namasyánte.

2. Subj. act. sing. 1. namasyā. 2. namasyās. 3. namasyāt. Du. 3. namasyātas. Pl. 3. namasyān.

Mid. sing. 2. namasyáse. 3. namasyáte.

3. Inj. act. sing. 2. namasyas. Pl. 3. namasyan.

 Opt. act. sing. 2. namasyés. 3. namasyét. Pl. 1. namasyéma.

Mid. sing. 3. namasyéta.

Impv. act. sing. 2. namasyá. 8. namasyátu. Du. 2. namasyátam. 8. namasyátam. Pl. 2. namasyáta. 8. namasyátu.

Mid. sing. 2. namasyásva. Pl. 2. namasyádhvam. 3. namasyántám,

6. Part. act. namasyant. Mid. namasyamana.

 Impf. act. sing. 2. ánamasyas. 3. ánamasyat. Du. 3. namasyátām. Pl. 3. ánamasyan.

Mid. sing. 3. ánamasyata. Du. 2. ánamasyetham. Pl. 3. ánamasyanta.

a. The only finite forms occurring outside the present system are four acrists. Two are injunctives: 2. s. ūnay-īs (RV.) from ūnaya leave unfulfilled (ūna); 2. pl. pāpay-iṣ-ṭa (TS.) from pāpaya lead into ceil (pāpa); and two indicatives: 3. s. ásaparyait (AV.) has unrshipped (an irregular form, probably = á-sapary-īt); 3. pl. á-vṛṣāy-iṣ-ata (VS.) they have accepted. The TS. has also the three fut, participles kaṇḍūy-iṣyant about to scratch, moghāy-iṣyant about to be cloudy, šikāy-iṣyant about to drip, with the corresponding perf. pass. part. kaṇḍūyitá, meghitá, šīkitá.

I In B. also occurs the is nor. Lawyit has moreoused.

In B. also occurs the future gopay-isyati.

h In B. there are also a few other past pass, participles and a few garunds.

CHAPTER V

INDECLINABLE WORDS

Prepositions.

176. Two classes of prepositions have to be distinguished. The first comprises the genuine or adverbial prepositions. These are words with a local sense which, primarily used to modify the meaning of verbs, came to be connected independently with the cases governed by the verbs thus modified. They show no signs of derivation from inflexional forms or (except tirás and purás) forms made with adverbial suffixes. The second class has been called adnominal prepositions because they are not compounded with verbs, but govern cases of nouns only. They almost invariably end in case terminations or adverbial suffixes.

1. Adverbial Prepositions.

There are fourteen or (if sam is included) lifteen genuine prepositions which, when used independently of verbs, define the local meaning of cases. They are almost entirely restricted to employment with the acc., loc., and abl. As their connexion with the abl. is only secondary, the genuine prepositions appear to have been originally connected with the acc. and loc. only. As a rule these prepositions follow, but also often precode, their case.

 The accusative is exclusively taken by ácha lowards, áti beyond, ánu after, abhi lowards, práti (Gk. προτί) against, and tirás across (cp. Lat. trans).

a. pari (Gk. περί) around takes the acc. primarily, but secondarily and more frequently the abl. in the sense of from (around).

- b. upa to (with verbs of motion) takes the acc. primarily, and less frequently the loc. in the sense of beside, upon, ut.
- The locative is exclusively taken by api (Gk. ἐπί) upon and primarily by adhi upon, antar (Lat. inter) between, a on, in, at, to, puras before.
- n. Adht takes the abl. secondarily and less commonly in the sense of from (upon).
- 5. The last three secondarily take both abl, and acc.; puras does so without change of meaning.

antar with abl. means from (within); with acc., before,

A with sec. means to, expressing the goal with verbs of motion. With the abl., if following, it means from (os. ; if preceding, up to.2

3. The ablative seems to be used once or twice independently with ava in the sense of down from.

2. Adnominal Propositions.

- 177. These prepositions, being adverbs in origin, govern oblique cases (except the dat.) independently. Several of them govern the genitive and the instrumental, cases that are practically never connected with the genuine prepositions in the Samhitās. In the following list these prepositions are grouped under the cases which they accompany:
- Acc.: adhás below (also with abl. or gen.), antará between, abhí-tas around, upári above, beyond, parás beyond (also with abl., more often inst.), parí-tas around (AV.), sanitúr apart from.¹
- Instr.; sahá with, sākám with, sumád with, smád with; avás below (also abl.), parás outside (also ace, and abl.).
 - 3. Abl.: adhás below (also acc. and gen.), avás down from

¹ It sometimes also precedes the abl, in this sense,

This is almost the only use of & in B.; in C. it means both from and up is.

³ In B. several adverbial instrumentals expressing situation or direction govern the nec.: antarena between, avarena below, parena beyond; fittarena to the north of, dakeinona to the moth of.

(also instr.), are fur from (also gen.), rté without, parás opart from (also acc. and inst.), purá before, bahir-dha from out. sanutár far from.

- 4. Gen.: purás-tad in front of.
- 5. Loc.: sácā (in association) with, beside, at, in.

Adverbial Case-forms.

- 178. Many case-forms of nominal and pronominal stems, often not otherwise in use, are employed as adverbs. Examples of all the cases appear with adverbial function.
- Nom.: prathama-m firstly, dvitiya-m secondly. Such adverbs were originally used in apposition to the verbal action.
- 2. Acc.: these adverbs find their explanation in various meanings of the case. They represent (a) the cognate acc.; e.g. bhūyas more, and comparatives in taram added to verbal prefixes, as vi-taram (kram) (stride) more widely; (b) the appositional acc.; e.g. nāma by name, rūpam in form, satyam truly; (c) the acc. of direction; e.g. agram (i) (go) to the front of, before, astam (gam) (go) home; (d) the acc. of distance and time; e.g. dūram a long way off, far; naktam by night, sāyam in the evening, nityam constantly, pūrvam formerly.
- a; There are also some see advertes derived from obsolute nominal stome, as are-m sufficiently, nu-nam now; others from pronominal stome, as adds there, i-dam here, now, ki-m why i, yad when.
- 3. Instr.: adverbs with the ending of this case (sometimes pl.) are formed from substantives, adjectives, and pronouns. They usually express manner or accompanying circumstances, as sahas-ā forcibly, navyas-ā unew, enā in this way; also not

t In B. the gen. is governed by this advert as well as by paras-tad q/fer; e. g. suktanya purastat be/ore the hymn; samvabsarasya parastat q/fer a poor.

infrequently extension of space or time, as agrena in front, aktú-bhis by night, div-ā by day.

m. The substantive instrumentals are chiefly formed from feminines in a not otherwise used, as rtaya in the right way, naktaya by might.

b. The adjective instrumentals are formed from stems in a and a few in c; e, g, used and used in high, pased behind, madhyd in the middl, fanain slowly; praced forwards. There are also several anomalous feminines from stems in u and one or two in t; e.g. āšu-y-d swiftly, raghu-y-d rapidly, aādhu-y-d straight, urviy-d far.

r. The pronominal instrumentals are formed from stems in a and one in a: a.g. and thus, ama at home, and thus, kaya how?, ubhaya in

both ways; anin-y-A in that ways.

- Dat.: the adverbial use of the dat. is rare: aparaya
 for the future (from apara later), varaya according to wish
 (vara choice).
- 5. Abl.: these adverbs are soldom formed from substantives, as arat from a distance, asat from near; or from pronouns, amat from near, at then, tat thus, yat as fur as; but they are fairly often formed from adjectives, as uttarat from the north, durat from afar, pascat from behind, sanat from of old, saksat cisibly.
- 6. Gen.: such adverbs are very rare: aktós by night, vástos in the morning.
- 7. Loc.: agre in front, astam-iké al home, aké near, aré ajar, rtő without, duré afar; aparişu in future.

Adverbs formed with Suffixes.

- 179. The suffixes more or less commonly used in the formation of adverbs may be grouped under the senses expressed by the instr., abl., and loc. cases.
- 1. Instr.: tha forms adverbs of manner especially from pronominal stems: å-tha and more commonly (with short-oned vowel) å-tha then, i-t-tha thus, imå-tha in this manner, ka-tha how?, tå-tha thus, yå-tha in which manner, anyå-tha otherwise, viávå-tha in every way; ürdhvå-tha upwards,

pūrvā-thā formerly, pratnā-thā as of old; rtu-thā regularly, nāmā-thā by name; evā-thā just as.

a. tham is similarly used in it-thism that and ka-thism hose?

dhā forms adverbs of manner from numerals or cognate words: eka-dhā singly, dvi-dhā in two ways, kati-dhā how many times, puru-dhā variously, bahu-dhā and viśvá-dhā in many ways, śaśva-dhā agaim and again. It also forms adverbs from a few nouns, adverbs, and pronouns: priya-dhā kindly, mitra-dhā in a friendly way; bahir-dhā outward; á-dhā then, a-d-dhā (thus =) truly. The same suffix, with its vowel shortened, forms sa-dha (in one way =) together, which appears as the first member of soveral compounds, and as an independent word assumes the form of sahá with.

d. The suffix ha probably also represents original dhā in i-hā aere (Prākrit i-dha), kū-ha where? višvā-ha and višvā-hā alsage, sama-ha in some your or other.

va, expressing similarity of manner, forms the two adverbs i-va like, as, and e-vá (often e-vá) thus, vam appears in e-vám thus, the later form of evá.

vat forms adverbs meaning like from substantives and adjectives; e.g. manu-vát like Manu; purāņa-vát, pūr-va-vát, pratna-vát as of old.

šas forms adverbs of manner with a distributive sense: šata-šás by hundreds, sahasra-šás by thousands, šroni-šás in rows: rtu-šás sasson by season, dava-šás to each of the gods, parva-šás joint by joint, manna-šás each as he is minded.

s forms two or three multiplicative adverbs: dvi-s lwice, tri-s lhrice. It also appears in a few other adverbs: adhá-s lelow, avá-s downeards: dyú-s (from dyu day) in anyedyú-s next day and ubhaya-dyú-s on bath days.

2. Abl.: tas forms adverbs in the ablative sense from pronouns, nouns, and prepositions; e.g. á-tas hence, amú-tas lhence, 1-tás from here, mat-tás from me; daksina-tás from the right, hrt-tás from the heart; abhi-tas ground, pari-tas

round about. These adverbs are sometimes equivalent to ablatives; e.g. ato bhuyas more than that.

tāt (an old abl. of ta that) forms adverbs with an abl. sense (sometimes merging into the loc.); e.g. adhás-tāt below; ārāt-tāt from afar; paścā-tāt from behind; purás-tāt in or from the front; prāk-tāt from the front.

3. Loc.: as forms adverbs chiefly of a local or temporal sense: tir-as across, par-as beyond, pur-as before; sa-div-as and sa-dy-as to-day, sv-as to-morrow, by-as yesterday; also mith-as wrongly.

tra or tra forms adverbs with a local sense, mostly from pronominal or cognate stems: á-tra here, anyá-tra elsewhere, visvá-tra everywhere; asma-tra among us, sa-tra in one place, daksina-tra on the right, puru-tra in many places, bahu-tra amongst many; deva-tra among the gods, martya-tra among mortals, sayu-tra on a couch.

These adverts are sometimes used as equivalents of locatives,
 c, g, hasta f daksinairā in the right hand.

dā forms adverbs of time almost exclusively from pronominal roots: i-dā now, ka-dā when? ta-dā then, ya-dā at what time, sā-dā and sarva-dā always.

& dam occurs beside da in så-dam abseys; and då-nim, an extended form of då, in i-då-nim sess, ta-då-nim then, visva-då-nim abseys.

y. There are also various miscellaneous adverba, mostly of obscure origin, formed with other suffixes of rare occurrence; e.g. pur-å lefore, mith-u avengly.

Conjunctive and Adverbial Particles.

180, angá emphasizes a preceding word (sometimes separated from it by short particles like hi and im) in such a way as to express that the action especially or exclusively applies to that word, = just, only, else; e. g. yó angá just he who; yád angá just when, just because; tvám angá thou only; kim angá how else, why else?

s. In B. angá never has this meaning; but it sometimes there begins a sentence with an adhorative sense, accontrating the verb; angá no yaidam vyantkava pray explain the sacrifice to us (MS.).

atra semetimes occurs as the correlative to yad when; e. g. viéve yad asyam ranayanta deváh, prá vo tra sumnám asyam when all the gods shall rejoice in it, then may I obtain your facours.

atha, a collateral form of adha, occurs chiefly in the more recent hymns of the RV., and entirely supplants the older doublet in the later Vedus. Connecting sentences and clauses it expresses a temporal or logical sequence. It may generally be translated by (and) then, (and) so; when there is a contrast, especially after a negative, it is equivalent to but. It often corresponds to a yada when or hi since, as, in the antecedent clause. With very few exceptions atha begins the sentence or clause. Examples are : marúdbhir, indra, sakhyám te astu, áthemá vísváh pýtana jayasi be friends with the Maruts. O Indra, then thou shalt win all these buttles (viii. 907); huvé vām, átha mā (= mā ā) gatam I call you, so come to me (viii. 10"); yaded adovir asahista maya, athabhayat kevalah somo asya when he had overcome the godless wiles. Soma became exclusively his (vii. 981); makir nešan, mákim risan, mákim sám šarl kévate, átháristábhir a gahi let none be lost, let none suffer harm, none incur fracture in a pit, but come back with them uninjured (vi. 547). From B.: pátim nú me púnaryuvāņam kurutam, átha văm vaksyami make my husband young again, then I shall tell you (SB.); aham durge hanta ity, atha kas tvám iti I am called the slayer in danger, but who are you? (TS.).

a, atha is also occasionally used after gerunds (which are equivalent to an autocedent clause); sanbhagyam acyai dattvays, side Astam vi paretana huming wishes her lack, then go home (x. \$5²³). This use is common in B., where it also occurs after present participles and locatives absolute.

^{5.} Aths in the sense of also connects substantives, but this use represents an abridged sentence; e.g. imé someso adhi turvase,

yadan, mos konvour vam atha them Somas are teside Portain, beside Yadu, (they are) also heelds the Kourse for you (viii, 914). From B. : iddim hi pita ava agre 'the putro 'the pantrah for here first comes the father, then the son, then the grandens (SB.).

a. In B. atha also connects the verbs of a compound relative clause : rásys pitá pitāmahāh púnyah syád, átha tán ná prāpnuyāt when

father and graniffather are pious, but who cannot attain to this (TS.).

átho (= átha u) generally means and also, moreover: arvaváto na a gahy átho, šakra, paravátah come to us from near, and also, O mighty one, from afar (iii, 8711). From B.: sám inddha a nakhébhyo 'tho lómabhyah he kindles himself completely up to his nails and also his hair (SB.).

a. In B. asho sometimes has the sense of sur also, e.g. to vai dve bhavatah . . . atho api trini syuh there are two of them, but there may also be thrue (SB.):

adha occurs in the RV, only, and almost exclusively, as compared with atha, in the earlier hymns. Like the latter it means then, expressing both a temporal and a logical sequence; when there is a contrast, but, adha...adha both ... and; adha dvita and that particularly; adha nu just none; now at last; and even; adha sma especially then. Unlike atha it is never used with u.

api meaning also, even generally precedes the word it emphasizes: yó gopā api tam huve he scho is the herdsman, him too I call (x. 194); ósadhir bápsad agnir ná väyati, punar yan tarunir api Agni tires not of thewing plants. returning even to the young ones (viii. 437). From B.; tád dhaitad apy avidvamss shuh even those who do not know say this (SB.); advapi even to-day (AB.).

aram is an adverb meaning suitably, in readiness. Sometimes used like an adjective, it is construed with the dative : e.g. tavamayam patave sómo astu, áram mánase yuvábhyam such let this Soma be (for you) to drink, according to (nour) mind for you two (i. 1082); sasmai, aram it is ready for him. In combination with kr it means serve, prepare (anything) for, with gam, seree, with bhu, accrue (to any one) suitably or sufficiently, always taking the dative.

a. Alam, the form in which the preceding word appears in B., is there often similarly mod; e. g. ed n'ilam ahntya asa nalam bhakaaya it are not fit for aftering, our fit for consuming (SB.).

áha in the RV. and AV. emphasizes a preceding word whether it be verb, substantive, pronoun, adjective, adverb, or preposition. Its sense may generally be expressed by surely, certainly, indeed, just, or merely by stress. It also appears after other emphasizing particles such as id, ghéd, utó, im. Examples of its use are: kváha where pray? (x. 51°); náha not at alt (i. 147°); yásyáha šakráh sávanesu rányati in the pressings of whomsoever the mighty one rejoices (x. 43°).

In B. this use of the is still found. But here it generally occurs in the first of two elightly antithotical sentences, the verb of the first being then nearly always accented, while the antithesis in the second sentence is either not expressed at all, or is indicated by the particles that, u, or tu; e.g. paracy that develope yajham what yarvaci manugyan avail turned owny it takes the sacrifies to the gods; turned below it educates uses (SB.). Sometimes (In MS, and TS.) that is thus used with the first of two vale; e.g. kasya vahedam avo bhavita kasya value of the first of two vale; e.g. kasya vahedam avo bhavita kasya value of the first of two vale; e.g. kasya vahedam avo bhavita kasya value of the first of two vale; e.g. kasya vahedam (MS.).

å (otherwise a preposition) appears in V. fairly often emphasizing, in the sense of completeness, words expressive of number or degree, or sometimes even ordinary adjectives and substantives; e.g. trir å diváh three times each day (i. 1423); kó vo vársistha å, narah who is the very mightiest of you, heroes? (i. 376); prá bodhaya púramdhim járá å sasatím iva awake the wise man, just as a lover a sleeping maiden (i. 1843).

ad (originally an abl. of the pronoun a = from or after that) is used as an adverb expressing sequence of time = thereupon, then, often as a correlative to yad, yada or yadi when, sometimes to the relative when equivalent to those conjunctions: yadéd áyukta haritah sadhásthád ád rátri

våsas tanute as soon as he has yoked his steeds from their stall, then night spreads her garment (i. 1154); ådhä yó viávä bhúvanābhy ávardhats, åd ródasī jyótisā váhnir åtanot now (who =) when he surpassed all beings, then the charioteer overspread the two worlds with light (ii. 174).

a. It semetimes connects words and clauses in the source of and, moreover: assues y a na urvara, Ad imain tanvam mama that field of ours and this my body (viil, 91°); yAd, indra, than prathamajam shinam, an mayinam aminah protá mayah when, O Indra, then didet slay the firstborn of the serpents and then didet bring to nought the wites of the wife (i. 32°).

b. It is sometimes used with interrogatives, when it means then, pray: kim ad amstram sakhyam how mighty then is the friendship? (iv. 23°).

c. Unless used with interrogatives, Ad almost invariably begins

the Pade.

d, ad is often followed by id, when it means just then then at once, then more than exet.

iti thus is used with verbs of speaking and thinking, which have sometimes to be supplied. The particle generally concludes the speech and is followed by the verb; ya indraya sunávāma, iti aha who says '100 will press Soma for Indra' (iv. 254); nendro asti, iti nema u tva aha 'Indra does not exist' one and another says (viii, 1003). Less commonly the verb precedes: jyoşthá āha camasa dva kara iti the eldest said 'I will make two cups' (iv. 333). Very rarely both iti and the verb precede the speech: ví prchad íti mātáram, ká ugran he asked his mother, ' who are the strong ones?' (viii. 771). The verb is occasionally omitted: tvásta duhitré vahatům krnoti, iti idam visvam bhuvanam sam eti 'Tvager prepares a wedding for his daughter' (thinking) thus this whole world comes together (x. 171). Thus a principal sentence as direct speech is used with iti where in other languages a subordinate sentence would be employed.

1. In B. the use of iti is much the same, only that fit regularly follows and seems seldom to be omitted: the verts of saying and thinking, too, with which it is employed, are more numerous: tatha_iti dawa abruvan 'yes', said the gods (SR). 2 There are in B. also some additional uses:

a. Very often the quotation is only an appellative that may be expressed by inverted comman: yams to still down adity a iti, a calquate school they call these "the dirice Iddiyas" (SB.).

h. Sometimes iti is used at the end of an enumeration to express that it forms a well-known aggregate; etad vai sirah sampdiham yasmin prago vak caksuh srutram iti shut is a complete head in which are breath, assect, our, cor (KB.).

c. The particle is also often used in a special sense with reference to a ritual set to indicate how it is done: iti_days kreati_diha_fti_

st. Sometimes a conjunction is introduced before the quotation that ends with iti, but without changing the construction; at plans abrayld yith sirvitar ova samavad visant, iti (MS.) he cover (that it will death with all equally (= that he would).

itthå primarily means so: gántā nūnām... yáthā purā, itthå as before, so come ye now (i. 397); satyám itthå truly so (viii. 3810). Secondarily it comes to mean (just so as it should be=) truly: kṛṇóti asmai várivo yá itthå indrāya sómam uśató sunóti he (Indra) gives case to him that truly presses Soma for Indra who desires it (iv. 246). In this sense the word is sometimes used like an adjective: itthå sákhibhyah for (those who are truly =) true friends (iii. 3210).

id (n. of the pron. stem i, Lat. i-d) is a very common particle in the RV., is much less frequent in the AV., and is comparatively rare in B.\(^1\) It emphasizes preceding words of all kinds, including the finite verb (which it accents), and may usually be rendered by just or stress only, sometimes by even; e. g. tad in naktam tad id divā mahyam āhuḥ this is what they tell me by night, this by day (i. 24\(^1\)); syāma id indrasya sarmani may we be in Indra's care (i. 4''); adha amā no maghavan carkṛtād it then especially think of us, O Bounteous One (i. 104''); sadfšīr adya sadfšīr id u śvāḥ alike to-day, alike even to-morrow (i. 123''). When the verb is

In classical Sanskrit id survives only in the compound particle cod W = ex-id.

compound, the particle regularly follows the preposition, not the verb itself: ulükhala-sutanam ava id v, indra, jalgulah gulp eagerly down, O Indra, the drops shed by the mortar (i. 281).

u. In B. the particle is similarly used : na tā it sadyo 'nyasmai ait differt he should not useign (just those =) the same (come) to senther on the some day (SB.); tatha in nunam tad as now thus if came to pass (SB.).

iva is an enclitic particle with two uses :

- 1. It means as if, as, like in abbreviated similes in apposition, never introducing a clause like yatha. It follows the word with which comparison is made; if the comparison consists of several words, the particle generally follows the first, less commonly the second. The comparison is usually complete, but not infrequently it is only partially expressed. This employment of iva is very common in V., but comparatively rare in B. Examples of this use are: duré cit san talid ivati rocase even though for away, thou shinest brightly as if near at hand (i. 947); tát padám pasyanti diviva cakpur atatam they see that step like an eye fixed in heaven (i. 220); sá nah pitá iva súnáve águe súpáyanó bhava as such be accessible to us, O Agni, as a father to his son (i. 1); dviso no ati nava iva parayu take us across our foes as [across the ocean] in a ship (i. 97); tābhī rājānam parigrhya tisthati samudra iva bhumim with these he keens embracing the king, as the sea the earth (AB.).
- 2. It modifies a statement not intended to be understood in its strict sense, meaning as it were. It chiefly follows adjectives, adverbs, prepositions or verbs. This use of iva is rare in V., but very common in B. Examples are: ihá jva Srave I hear close at hand as it were (i. 379); tad, indra. pra iva viryam cakartha that heroic deed, O Indra, thou didst perform (as it were =) quite pre-eminently (i. 1037); ya pra iva nášyasi who (as it were =) almost losest thyself (i. 1461); yadi tan na iva haryatha if ye are not quite pleased with that (i. 161°). From B.: tásmāt sá babhruká iva hence he (is as

F 140

it were=) may be called brown (SB.); rebhati_iva he seems to chatter (AB.); tan na sarva iva_abhipra padyeta not exactly every one should have access to that (SB.); upari_iva vai tad yad urdhyam nabheh above may be called what is higher than the navel (SB.).

im (an old enclitic acc. of the pron. root i) occurs in V. only, and is almost restricted to the RV.

- 1. It is generally employed as an acc, sing, of all genders = him, her, it, sometimes even as an acc, du, or pl. It either takes the place of a noun, or prepares for a following noun, or is accompanied by other pronouns (tâm, yâm, enam, enan); e.g. à gachanti îm âvasă they come to him with aid (i. 85¹¹); à îm âsûm âsâve bhara bring him, the swift, to the swift (i. 4¹); tâm îm hinvanti dhītāyah him devotions impel (i. 144^h); yâd îm enam usaté abhy âvarşît (vii. 103ⁿ) when it has rained upon them that longed (for raîn).
- 2. Im also appears as a generalizing particle with relatives (whoever), with yad (whenever), with interrogatives (who, pray?), with kim cana (nothing at all); e.g. ya im bhavanti ajayah whatever conflicts take place (vii. 32¹⁷); ká im vyakta narah who, pray, are the radiant men? (vii. 56¹).

n is an enclitic particle, often written û where the metre requires or favours a long syllable, especially in the second syllable of a Pada, before a single consonant. It often appears contracted to o (cp. 24) with a preceding a or a (mostly the final of particles or prepositions, also of the pron. esa, sometimes of verbal forms). It has two main uses in the RV.:

- 1. It is employed deletically with verbs and pronouns.
- a. With verbs it expresses the immediate commencement of an action: with a present = now, already; with a past tense = just; with an imperative, injunctive, or optative used in an impv. sense = at once; so is here very often added, 0 so being = instantly. When the verb is accompanied by a preposition, the particle regularly follows the

latter. Examples of its use are: ud u tyam jātavedasam devám vahanti ketávah his beams now bear aloft the god that knows all creatures (i. 501); abhud u bhah the light has just arisen (i. 46"); tapa u sv ague antaram amitran burn instantly, O Agni, our neighbouring foes (iii. 182).

- u. This nee of u with verbal forms does not seem to be found in B.
- b. It emphasizes deictic pronouns, which may then berendered by stress, and interrogative pronouns, when it may be translated by pray; e.g. ayam u to, sarasvati, vasistho dvarav rtásya subhage vy avah this Vasietha has opened for thee, O bountiful Saraseati, the two doors of sacrifice (vii. 95'); kā u śravat who, pray, will hear? (iv. 431).
- u. In B. this use is very mre with deletic prenouns, but not infrequent with interrogatives; e. s. idám u no bhavisyati yádi no jesyanti this of least will remain to us, if they conquer us (TS.) ; kim u sa yajūšno yajeta yo gam iva yajūšm na duhita sabut sort of eacrifice, prosp, would be offer if he seere not to milk out the serrefice like a cose? (MS.).
- 2. The particle u is used anaphorically to connect sentences, when a word (usually the first) is repeated in the second, in the sense of also; e.g. trir naktam yathas, trir u, asvinā, divā thrice by night ye come, thrice also, O Asvins, by day (i. 342); tvám tratá tvám u no vrdhé bhúh thou be our protector, thou, too, be for our increase (i. 1786). The repeated word need not always have the same form: yo no dvésty ádharah sás padísta, yám u dvismás tám u prano jahatu may he who hates us fall downward; whom also we hate; him too let his breath forsake (iii. 5321). The u sometimes appears in both sentences, sometimes in the first only: vayám u tva díva suté, vayám náktam havamahe ace call thee by day to the pressed Soma, we also by night (viii. 64°).
- a. It is sometimes used without referring back definitely, but simply adding some similar quality or activity with reference to the same thing = and also, and; e.g. sá devo deván práti paprathe prthú, visvéd u tá paribhúr bráhmanas patih ho, the god, has extended himself widely to the gods, and he. Lord of Prayer, embraces all this universe (ii. 2411).

b. It also, in the same sentence, expresses a contrast = on the contrary, or, more frequently, with the demonstrative the corresponding to the relative ya = again, in return; e.g. striyah satis tamu me pumsa ahuh those who are women, them on the contrary they speak of to me (as) men (i. 16416); yo adhvarésu hota.. tam u namobhir a kṛṇudhvam him who is priest at sacrifices, in return bring hither with devotions (i. 774).

u. In B. the anaphoric use is common, prevailing chiefly in the SB.; e.g. tasmad wa indro bibbet, tasmad u twastabibbet of that

Imira was afraid, of that also Trasfy was afraid (MS.).

a. The demonstrative here often refers back with a to previous statements: uto pasicavatian eva bhavati: pasich, pasic

B. A slight contrast is expressed by n in the second sentence; yadi nashati pitraevatyo bhavati, yady v sanati davan aty sanati if he does not set, he becomes a scorshipper of the Muses, but if he does not had onto before the coats (SB.).

y. Used in combination with kim, a expresses a climax in the second clause a hors much more: manusy's in nvs apastirnam ichanti, kim a davs yessim navevasanam vect men wisk for numbhog spread out, have numb more the gods whom is a new deciling (TS.).

utá in the RV. means and, connecting two or more words or sentences.

a. The particle commonly couples two words; e.g. yah... prthivim utá dyam éko dadhára who alone has supported heaven and earth (i. 154). When there is an enumeration of more than two objects, utá comes after the last; e.g. ádite, mitra, váruna utá O Aditi, Mitra, and Varana (ii. 2714). When a word is repeated from the beginning of a clause, utá (like u) follows the repeated word: trih saubhagatvám trir utá śrávámsi nah thrice (grant) us prosperity and thrice june (i. 843).

b. When utå connects a sentence with a preceding one, it is placed at the beginning: eténagne brâhmana vavrdhasva... utá prá nesy abhí vásyo asmán with this prayer.
O Agni, strengthen thyself, and lead us onward to greater fortune (i. 3118).

c. utá...utá means both...and; utá vā or; utá vā...utá vā either...or; e.g. utá idánīm bhágavantah syāma utá prapitvá utá mádhye áhnām both now may we be fortunate and at eventide and at midday (i. 414); samudrád utá vā divás pári from the ocean or from heaven (i. 476); yā ápo divyā utá vā srávanti khanitṛmāh either the waters that are cotestial or that flow in channels (i. 492).

a. In B. utá does not mean and, but also, even, emphasizing the assertion generally and not (like api) a single notion in the sentence: utá yádi, hásur bhávatí fívaty avá ocen uken hér breath is gone, to still lies (TS.). Even when proceeding a substantive utá means to refer to the whole statement: utá mátsya avá mátsyam gilati si is also the case that one fish decours another (SB.).

B. With the opinion utá expresses that an action might ofter all take place; utá_ovám ciú deván abhí bhavama ofter all us might than percente the gods (SB.).

b. uts. ... utd in B. (as well as in V.) means both, and: uts riava uts passive it bruyit he should say both the second and the autimate (SB.).

7. utá is regularly the first word in the sentence except that kim or forms of the or yn procede it; themed utá bahúr spasúr bhavati thursfore sees though rich he becomes intifelius (SB.).

utó (= utá u) in the RV. means and also; utó no asyà usaso juséta hi and may he also be pleased with us this morning (i. 131°).

u. In H. uto has the same of his one or also: shavaniye havings srapayeyuh . . . uto garhapatya eva srapayanti they should cook the blaifes on the Identifies for, but they also cook it on the Tarkapatya (SB.).

evá has two uses in the RV. and the AV.:

At the beginning of sentences or clauses it means thus, referring either to what precedes or follows; e.g. evägnir gótamebhir astosta thus Agni has been praised by the Golamas (i. 775); evä täm ähur; indra éko vibhaktā thus they speak of him: 'Indra is the one dispenser' (vii. 264).

It often appears as the correlative of yatha as: yatha na purvam aparo jahaty, eva, dhatar, ayumsi kalpayaisam as the later abandons not the earlier, so, Greator, arrange their lives (x. 18%). With the impv. eva = so, then: eva vandasva varunam brhantam (viii. 42%) then praise the lofty Varunu (who has done these great deeds).

2. As an emphasizing particle following the word on which stress is laid, evá may be variously rendered just, quite, alone, &c., or by stress; e.g. tám evá him only; éka evá quite alone; átraivá just here; svayám evá quite spontaneously, jatá evá scarcely born, ná evá not at all.

e. In B. the first of the above uses has entirely disappeared (evan here taking the place of eva, while the second is extremely common. The particle follows all kinds of words requiring emphasis for any reason; this is especially the case when a word is repeated; e.g. yam agre 'guin hotraya pravipata, sa pradbanvad, yan dvittyam pravipata, as pra eva adhanvat the Agril whom they first those for the principal, parished; he whom they those the second time, there is product (SB.). When two notions are connected by way of contrast or otherwise, eva may follow either the first or the second; e.g. amim eva deva upayan, imam search (SB.) the gods takended that toold (heaven), the dance this one (the earth); some yuamakam, vag evasmakam (let) some (be) goors, Vat may (SB.).

evăm thus occurs only once in the RV. (as correlative to yatha as) and in the AV. not at all with yatha, but only as an adverb with the verb vid know; ya evam vidyat he who may passess such knowledge.

In B. evam is very common, having two uses :

1. It is correlative to yasha as, being often accompanied by a form of the same verie as the latter; s. g. yatha vai parjanyah suverstim varsaty, avam yajho yajamanaya varsati as Purjanya rains heavily, as his encripte rains for the encripter (TS.). When the second verb is emitted, yatha, evam is equivalent to Iva; e.g. to devi abby harjyanta yatha vittim vetsyamana evam the gods ranked up like those making to obtain property (SB.).

2. It accompanies verbs as an adverb, especially in the very frequent phrase ya evam veda he who possesses such knowledge; uta, avam can na labhoran after all they will then not teach it (SE.).

Disp?

kam appears both as an accented and an unaccented particle. The former use is found in both V. and B., the latter in the RV, only.

I. a. kam as an adv. with the full meaning well (equivalent to the Vedic sam) appears in B. only; e. g. kam me 'sat may it be well with me (SB.); it also occurs in a negative form: s-kam bhavati he fares not well (TS.).

b. kám has the same meaning attenuated after datives (generally at the end of a Pada) either of persons = for the benefit of (dat. commod) or of abstract nonus (final dative); a.g. yuvám etám cakrathuh síndhusu plavám taugryáya kám ye two have placed that ship in the waters for the benefit of the sam of Tugra (i. 182°); tvám dováso amŕtáya kám papuh thee the pods have drunk for the love of immortality (ix. 106°); samánám añjy áñjate subhé kám (vil. 57°) with the same hue they adorn themselves in order to shine (well). From B.; kásmai kám agnihotrám húyata iti for whose benefit is the Agnihatra offered? (MS.); téjaso kám půrnámá ijyate for the sake of splendour the full moon sacrifice is offered (MS.).

2. The unaccented kam occurs in the RV, only excepting one independent passage of the AV. It always appears us an enclitic following the particles nu, su, hi. It means willingly, gladly, indeed, but the sense is generally so attenuated as to be untranslatable, nu kam appears with the injerimpy, subjerind, also in relative clauses; e.g. aso nu kam appears with the imperative only; tistha su kam, maghavan, ma para gah pray stand still, bounteous god, go not further (iii, 53°), hi kam generally appears with the ind, (occasionally omitted), sometimes with impy, or subjeraja hi kam bhuvananam abhisrih for he indeed is the king who rules over beings (i. 98°).

kim (n. of ki = ká) has two uses. In the first place it means why? s. g. kim u śrósthah kim yávistho na ájsgan

8810

why has the best, why has the youngest come to us t (i. 1611). It is also a simple interrogative particle (equivalent to a mark of interrogation); e.g. kim me havyam ahrnano juseta would he, free from anyer, enjoy an oblation of mine t (vii. 862); kim rajasa ena paro anyad asti is there anything else beyond the welkin t (AV, v. 115).

a. In B. kim is similarly used. With following u it here adds a climax in a second sentance = how much unre (see u); with following utf and the optative it means why after all; e.g. kim utf twareran why, after all, should they hasten? SB.).

kita, an uncommon particle in V., meaning indeed, certainly, strongly emphasizes (in RV. and AV.) the preceding word (noun, pronoun, adjective, and the negative na); e.g. svādus kita ayam (vi. 471) sweet, indeed, is this (Soma); tādītnā šātrum na kitā vivitse then thou didst find no for at all (I. 324).

a. In B. the use is similar; e.g. ksipram kūs, ā struuts (SB. quickly, then, spread (the barhis). But here kūs usually follows other particles, rāi or (ha) vāvā: esā vāi kūs havişo yāmah thu, indeed, is the course of the sacrifice (SB.); tava its vāva kūs blingava idam Sir, this belongs to you only (AB.).

kuvid, a pronominal interrogative particle, introduces sentences which, though apparently independent, are treated as dependent, since the verb (except twice in the RV.) is regularly accented. This use seems to have arisen from the particle's having been employed as an elliptical expression of doubt such as might be rendered by 'I wonder (whether)'; e.g. tâm, indra, mādam à gahi kuvin uv àsya tṛpṇāvaḥ come, Indra, to this carouse (to see) whether you shall enjoy it (iii. 42°); kuvit somasya âpām iti have I, indeed, drunk Soma (x. 119¹) = (I wonder) whether I have drunk Soma.

n. In B. kuvid is similarly used; e.g. kuvin me putrám ávadhit has he actually kuled my son? (SB.): kuvit tözném áste doss he indeed ris allent? (SB.).

khálu indeed, in truth, does not occur at all in the AV., and only once in the RV., where it emphasizes an imperative: mitrám kraudhvam khálu pray, conclude friendship (x. 3411),

a. In B. the particle is common. It is rarely used alone, but often with other particles.

a. It appears alone with the impv., subj., or ind.; e.g. Atra khālu ramata ker, gray, remain (SB.); rūhnāvat khālu až yō maddevatyām agnīm ādādhātai ke indeed shall prosper who shall establish a fire conservated to me (TS.); asmākām evā_idām khālu bhūvanam to us ukme indeed this servid belongs (SB.).

 After the particles u or atha and before or after val, it emphasizes the word preceding the combined particles; e.g. tad u khalu maha-

railed bhavatt thus, indeed, the great sacrifice arises (SB.).

a. Atho khalu is used either to express an (usually preferred) alternative - or size, or rather, but savely rather; or to introduce an objection; e.g. vajávadovám šti brůyád, átho khálu sindrám šti brůyát 'for all gods' one shauld any, or else ane should any 'for Ludra' (TS.); dikyitena satyam eva vaditavyam; atho khalv áhuh; ko 'rhati manusyah sarvam satyam vaditum iti an entialed mun shauld speak the truth only; none they make the effection: 'what man an apeak the whole truth " (AB.).

B. vái kháin can only be distinguished from vái alone as an emphatic vál. But kháin vái in the TS, and AB, has the special use of introducing a second causal protesis after a first beginning with simple vái, the conclusion then following with evá; e.g. prajápativ vái púrunah; prajápatih kháin vái tásya veda; prajápatim evé svéna bhágadheyéna upa dhávati new man comes from Prajápati; again Prajápati knews ubout khá; so he approaches Prajápati seith the portion (of the sacrifice) belenging to kém (TS.). This use occasionally occurs even though the preceding clause does not begin with vái.

gha is an enclitic particle, almost restricted to the RV. Generally occupying the second place in the Pada, it is with few exceptions metrically lengthened to ghā. It emphasizes the preceding word, which is nearly always either the negative nā, or a pronoun (demonstrative or personal), or a verbal preposition, the meaning being variously rendered by just, only, very, or merely stress. It emphasizes a nonn only twice and a verb only once in the RV.: triive ghā savane at least at the third Soma libation (i. 161); ušānti ghā tá amftāsa etāt thase immortals desire this (x. 103).

ea (Ok. 76, Lat. -que) and is an enclitic conjunction used to connect both words and sentences. It regularly follows an accented word, and when it adds a clause, the first word of that clause.

1. ca connects substantives (including pronouns and numerals) and adverbs; e.g. mitrăm huve văruņam ca I incole Mitra and Varuņa (i. 27); maghávăno vayám ca the patrons und ace (i. 724); ŝatám čkam ca a hundred and one (i. 11714); adyá nunăm ca to-day and now (i. 136). In a few passages (but never in B.) the ca follows the first word instead of the second: naktā ca.. uṣāsā night and morning (i. 787).

a, ca. ca are used much in the same way; v.g. girayas ca dyava ca thumb the movement and hourse and earth (1.612); divás ca gurás ca of hences and of earth (1.375), asmaid ca thins ca no and them (ii. 115); nava ca mavatim on and and ainety (1.3221); à ca para ca carantam movem hither and many (1.1612).

Similarly in B. : dovás ca dsurad on yede and deeres (SB.); eastis on trint on satant sixty and three hundred; purdation on updristing on

from before and from behind.

B, ca., ca sumetimes also express a contrast: nakto ca cakrur usash virupo: kranam ca varnam arunam ca sam dhuh they have sands night and morning of different aspect: they have put together the black culture and the rudits (i, 73°).

Similarly in B. : abháyam gramyám ca áranyám ca juhoti is

exercificar bether what is some and what is wild (MS.).

a. A peculiar use of ca in the RV, is to add a second vocative in the form of a nominative; e.g. vayav indras on. . a yatam O Vagu and Indra, come (i. 2°).

b. Another peculiar use of ca, both in V. and B., is to add one noun (nearly always in the nom.) to another which has to be supplied; e.g. â yâd indras ca dâdvahe when we hee. (I) and Indra, receive (viii. 3418); indras ca sómam pibatam, brhaspate do ye. (thou), O Brhaspati, and Indra, drink (iv. 5019).

From B.: tā bṛˈhaspatis ca anvavaitām they two, (he) and Bṛhaspati, followed them (TS.): tāt samṛñām kṛṣṇājināya ca

vadati so he pronounces harmony (between it) and the black antelope skin (SB.).

- a. In B. ca is used to aid a single word at the end of a sentence in the sense of and (se did); e.g. aramona ha ama vai tad deva jayanti yad caam jayyam asa, frayad on by promes the gods were send to sain what was to be seen by them, and so did the secre. SB.).
- c. ca following the interrogative kå, or the relative yå and the interrogative kå combined, gives them an indefinite sense: kåå ca or yåh kåå ca any one, whoever (cp. 119 b).
- 2. ca also connects both principal sentences and relative clauses: å devébhir yāhi yākṣi ca come with the gods and sacrifice (i. 141); yā vyūṣūr yāś ca nūnām vyuchān that have shone forth and that shall now shine forth (i. 11310); yò 'smān dvēṣṭi yāṃ ca vayāṃ dviṣmāḥ who hates us and whom we hate (ŚB.).
- a, ca...ca connect sentences to express a contrast by means of parallel verbal forms which are either identical or at least appear in the same number and person, the first verb being then always accented: para ca yanti punar a ca yanti they go away and come again (i. 12312).
- n. In B. the use of on... on is similar; e.g. vatsám ca upávasjáty ukhám ca adhi árayati ke admir the calf and puts the pot on the fire (TS.). The rule of accentuation applies even when the second verb is omitted: aguáye en havily paridádáti gúptyà asyál ca prthivyál he delters the chlatian for protection to Fire and to the Earth (SB.). This connecting use la particularly common in parallel abridged relative sentances: sárván pasáin ai dadhire yé ca gramyá yé ca aranyáh they kid down all mainais, these that are tume and these that are wild (SB.).
- 8. ca is used a few times in V. in the sense of if with the subjunctive or the indicative: indras ca mṛlayati no, na nah pascad aghām nasat if Indra be gracious to us, no calomity will hereafter befoll us (ii. 4111); imām ca vācam pratihāryathā, naro, višvéd vāmā vo ašnavat if ye graciously accept this song, O heroes, it will obtain all goods from you (i. 409).

caná, properly meaning not even, is most usually employed

after a negative; e.g. trityam asya nákir a dadharsati, váyaš caná patáyantah patatrinah no one dares approach his third (step), not even the winged birds though they fly (i. 155°). From its use in such supplementary clauses, where it may also be translated by even, the latter sense comes to be the natural or even necessary one after a negative in a single clause sentence; e.g. yásmád rté ná sídhyati yajňó vípašcítaš caná without whom the sacrifice does not succed [not] even of the wise man (i. 187); indram ná mahná prthiví caná práti even the earth is not equal to Indra in greatness (i. 81°). As one of the two negatives is superfluous in a single clause sentence, caná alone occasionally does duty for the negative; mahé caná tvám párá šulkáya deyám not even for a great reward would I give thee away (viii. 1°),

a. In a few passages, even when there is no accompanying negative, can't throwing off its own negative sense, means even, also: aham can't tat suribhir anasyam I too would acquire this with the patrons (vi. 26'); adh't can't sa'd dadhati therefore also they believe (i. 55').

as In B. can't appears only after a negative in single clause continues, in which not can't means not seen; e.g. no hatman sapathas thereforeamanas can't string as morne fills him even though desiring to full this SB.).

b. caná gives the interrogative an indefinite sense: káś
caná any one, ná káš caná no one (cp. 119 b).

cid is an enclitic particle very frequently used to emphasize the preceding word. It has two senses:

1. expressing that the statement is not to be expected in regard to the word emphasized; even; e.g. a drdham eid arujo gavyam urvam even the firm constall thou hast broken through (iii. 3216). This sense is, however, sometimes so attenuated as to be capable of being rendered by stress only; e.g. tvam ein nah samyat bodhi svädhih be then attentive to our andeavour (iv. 31).

2. generalizing = any, every, all; e.g. kṛtáṃ cid énaḥ prá mumugdhy asmát (i. 24°) remove from us any (every, all) sin committed (by us). Similarly, with interrogatives = any, with relatives = ever; thus kắś cid any one: śṛṇóti kắś cid eṣām any one (= every one) hears them (i. 37½); sunvádbhyo randhayā kắṃ cid avratám subject every impious man to those that press Soma (i. 132½); ná or mā káś cid (not any =) no one; kadā cid ever = at any time or always; yáś cid whoever; yác cid if ever; yáthā cid as ever:

s. In B, the only use that survives is the generalizing sense with interrogative pronouns = any, some; e. g. atha kan cid aha then he may to some one (SR); yat to kin cid abravit schol one one said to you (SR).

céd (= ca id) if occurs only three times in the RV., but later becomes commoner. In the RV. and AV. it is found with the ind. pres. and aor.; in the AV. it also occurs once with the opt. Thus: vi céd uchánty, asvinā, uṣāsaḥ, prá vāṃ bráhmāṇi kāravo bharante when the Dauens shine forth, O Aścins, the singers offer prayers to you (vii. 724); brahmā céd dhástam āgrahīt sá evá pátir ekadhā if a Brahman has taken her hand, he alone is her husband (AV. v. 176); iti manvita yācitáḥ vaśāṃ céd enaṃ yāceyuḥ thus one would thìnk who has been requested, if they were to request a cow of him (AV. xii. 448).

a. In B. céd is used with the ind. pres., nor., fut. and with the opt.; o. g. átas céd eva náiti násya yajúó vyathate (f ha doss m² go usus from thur, his sucritis doss má frai MS.); as hováca túriyam-turiyam cén mám ábibhajams túriyam evá tárhi ván níruktam vadisyatíti he said "(f they have green me only ene-fourth cach time, then I'm mill speak distinctly only to the extent of one-fourth" (Sit.); tám cén me ná vivákayani, můrdha te ví patisyatí if pos conset explois this (riddle) to see, gour head still borst (SB.); stám céd anyásmá anubrūyās táta evá te síras chindyām (f pos seere to tell this is mather, I scould strike off gour head (SB.).

tátas occurs in the RV. several times adverbially in the local sense of the ablative = thence; e.g. táto visám prá vävyte thence the poison has turned away. It also, but very

rarely, has the temporal sense of thereupon, then; e.g. yajiláir átharva prathamáh pathás tate, tátah süryo. . ajani with sucrifices Atharvan first extended the paths, then the sun was born (i. 88°).

a. In B., on the other hand, the temporal sense of the corporal sextremely common. Here it also often appears at the beginning of a sentence connected with a proceding one in the sense of therefore, consequently; a.g. at yajhan eva, yajhapatrani pra vivesa; tate hatmap na sekatur nfrhantum it indoced into the sacrifice the?, tate the sacrificial cassels; consequently them has been core models to expect it (SB.).

tátha occurs in the RV. in the sense of so, thus; e.g. tátha rtúh such is the rule (i. 8317). It also appears as a correlative (though less often than eva) to yátha; e.g. śyāvāšvasya sunvatās táthā śrņu yáthāśrnor átreh listen to the sacrificing Śyāvāšva as thou didst listen to Atri (viii. 367).

or. In B. the use is similar; e.g. tatha, in nandan tad and m, indeed, it came to pass (\$B.); an correlative (though less often than evam) to yatha; no val tatha, abbiid yatha, amagust it has come about as That thought (\$B.).

b. tátho [= tátha_u) occurs in B., meaning and in the same way, but set; v.g. tátho evóttare ni vapet and to the same way he should resign the last two [TS.]; så yåd daksinå-pravana syåt, keipré ha yåjamano mun lotam iyåt, tátho ha yåjamano jyög jivati (fit (the altar) sorre segung to the smith, the smortder mould quickly us to samber with, but thus last it is the sacrificer trong long time (SB.).

tad is often used adverbially in the RV. It then has three different senses:

- It frequently means then as correlative to yad when;
 g. yaj jayatha vṛṭrahātyaya tat pṛṭhivim aprathayah when then wast born for the Vṛṭra-fight, thou didst spread out the earth (viii. 89°).
- It is also often used in the sense of thither (acc. of the goal); e. g. tad it tva yukta harayo vahantu thither let the yoked bays wait thee (iii. 534).
- 3. Occasionally it has the sense of therefore; e.g. tad vo deva abruvan, tad va agamam that the gods suid to you,

therefore I have come to you (f. 1612); prá tád visnuh stavate viryèna therefore Vissu is praised for his heroism (I. 1542).

q. In B. tad has four different adverbial uses :

1. as a correlative to yad luhan, (number as) = thereby, and to yátra (mhore) – there ; e. g. yán ny évá rájánam abhisunvánti, tát tám ghnanti note action they prese the king (somm), they kill him thereby (SB.); yatranya osadhayo mlayanti tad eté modamana vardhante scherr other plants wither, if (the wheat) grous marrily (SB.).

2. in the same of therespon, thus; e.g. atha, itithim samam tad angha aganta, tan ma navam upakalpya, upasasai nou in ama and such a usur is flood will then come, then having built a whip you shall been

h mer (SB.).

8. constantly with reference to a preceding statement in the sense of us to that, thereby, thus; u.g. yajnam eva tad deva upayan the gods thus obtained the exertites (SB.); the tild availablem eve yad brahmand. rajanyah syat so it is quite entlable that a Brahman should be mithaut a king (SB.; tad almb as to that they map; tad u talt now us to this (SB.).

4, before yad with reference to a proceeding statement to add an explanation, and may be rendered by that is to say, now; v. g. tad yad sed otat tapati tana sed sukráh mor, fnamuch as he burns here, therefore he is bright (SR.). Similarly in the phrase tad yat tatha that is to may, today if is so (in an follows) - the remon for them in an follows (SR. ..

tarhi at that time, then, occurs only once in the RV., but several times in the AV.: na mrtyur asid amftam na tarhi there was not death nor immortality then (x. 1297). In the AV, the word appears as correlative to yada when, and in B. to yatra, yad, yada, yarhi when, and yadi if; e.g. raksāmsi vā enam tarhy a labhante yarhi na jāyate the Ruksases then seize him when (the fire) does not arise (AB.); yádi vå rtvíjo loká bhávanty aloká u tárhi yájamanah if the priest is without a place, the sacrificer is then also without a place (SB.).

tasmad therefore is not found as an adverb in the RV., but occurs several times as such in the AV., and is constantly so used in B. As correlative to yad because it appears once in the AV. and is very common in B.; e.g. yad vai tad várunagrhītābhyah kám ábhavat tásmāt kāyáh (MS.) because those who were seized by Varuna felt well, therefore it is

called kaya (body).

tú, though accented, never commences a sentence or Pada. It has two uses:

- It is an emphasizing particle. In the RV., where it occurs nearly fifty times, it seems to be restricted to this sense.
- a. In about two-thirds of its occurrences the emphasizes an exhortation in the 2 pers. impv. (rarely the 3 pers., or the subj. in an impv. sense) = pray, then; e.g. å tv étä, ni sīdata pray come, sit you down (i. 51); ná te duré paramā end rājāmsy, å th prā yāhi hārībhyām even the highest spaces are not fur to thee; come hither, then, with thy two bays (iii. 301).

b. In several passages tù emphasizes assertions (generally following the demonstrative tā) in the sense of surely, indeed; e.g. tát tv àsya that surely is his work (iii, 30¹²).

2. It is an adversative particle meaning but. This is its sense in the only passage of the AV. in which it occurs, and is its only meaning in B.; e.g. cakara bhadram asmabhyam atmane tapanam tu sah he has done what is good for us, but painful to himself (AV. iv. 18°); tad evam véditor na tv evam kartavai that one should know thus, but not do thus (MS.). With aha or nu in the preceding clause, it expresses the sense it is true...but; e.g. tad aha tesam váco, 'nya tv évatah sthitih this indeed is what they say, but the established practice is different therefrom (SB.).

tena occurs in B, as an advert correlative to yad because; e.g. yad gramyasya na Asnati tena gramyan ava runddhe because he dees not est any tena unmada the give he guins tema unmada for himself (MS.).

tvåvå (compounded of tu våvå), a particle sometimes occurring in B., does not perceptibly differ in sames from våvå (q. v.); e.g. tråyo ha tvåvå paååvo 'modhyåh there are just three blinds of autombantit for sacrifice (SB.).

tval (compounded of th val) is sometimes found in B. meaning but indeed.

dvita, a particle occurring about thirty times, is restricted to the RV. There can be no doubt that it is an old instru180]

mental, etymologically meaning doubly. This sense taken either literally = in two ways, or figuratively = emphatically, especially, more than ever, seems to suit all the passages in which the word occurs; e.g. bharádvájāya áva dhukṣata dvitā dhenum ca viśvádohasam iṣam ca viśvábhojasam on Bharadvaja do ye (Maruis) milk down doubly, both the all-milking cow and all-nourishing food (vi. 4813); rājā devānām utā mārtyānām dvitā bhuvad rayipātī rayīņām as king of gods and mortals may he be doubly lord of riches (ix. 9724); dvitā yō vṛṭrahāntamo vidā indraḥ śatākratuḥ ūpa no hāribhiḥ sutām may he who above all is known as the best Vṛṭra-slayer, Indra Śatakratu, (come) to our pressed Soma with his bays (viii. 9323); gavām ōṣe sakhyā kṛṇuta dvitā (x. 482) in the search for the cows he especially concluded friend-ship (with me).

a. The word occurs several times with 4dhs, meaning and that for double or especially, c. g. vi têd vocer édha dvită explois this, and (do so) particularly (i. 1823).

ná has two senses in V. (but only the first of the two in B.):

I. As a negative particle meaning not it denies an assertion, appearing in principal sentences with the ind, of all tenses, with the subj., the opt., the inj. (in the sense of a fut.), but not with the impv.; it is also employed in relative and conjunctional clauses. It negatives either the assertion of the whole sentence (when it appears as near the beginning as possible, in V. even before the relative) or only the assertion of the verb. It can only be used in a sentence which contains a finite verb or in which one is to be supplied. There seems to be no undoubted example of its negativing any word (such as a participle or adjective) other than the verb. The employment of this negative m is much the same in B. as in V.

. A verb (such se sait is) has often to be supplied with this negative in simple sentences, especially with the gorandive, the

infinitive, or a dative equivalent to an infinitive; e.g. the ma surkeyam that (is) not to be translet about (MS.); no yo variya mán (is) not for himtering — who is cranistate (i. 143). Or the verb has to be supplied in a second sentence from the first; e.g. naktasm tipa tinthate, no pranch he northing at night, (he does) not (worship) in the secondary (TS.).

 Two negatives express a strong positive; e.g. na hi pasavo na bhuñjanii for catte alerays sat (MS.).

2. ná is used in V. (very commonly in RV., comparatively rarely in AV., but never in B.) as a particle of comparison, exactly like iva as, like. This meaning seems to be derived from not as negativing the predicate of a thing to which it properly belongs; e. g. 'he (neighs), not a horse neighs' = 'he, though not a horse, neighs' = 'he neighs like a horse'. This ná, being in sense closely connected with the preceding word, nover coalesces in pronunciation (though it does in the written Sandhi) with a following vowel, whereas ná not generally does. This ná always follows the word of comparison to which it belongs; or if the simile consists of several words, the ná generally follows the first word, less commonly the second; e.g. arán ná nemíh pári tá babhūva he surrounds them as the felly the spokes (i. 321); pakvá šákhā ná like a branch with ripe fruit (i. 8').

M. When the object compared is addressed in the voc. which is semetimes to be supplied), the object with which it is compared is semetimes also put in the voc. agreeing with it by attraction; e.g. ago ná subbra á bhará like brilliant Dawn, (O sasrificer bring (L 572); táve ná citre, arugi like a brilliant murs, O raddy Dawn (L 3021).

b. When the object compared is not expressed, no means as if were;
6, g. sixábhir na amayamanabhir agat be has come with grazious smiling aposto as it toys (1, 70°).

and sometimes interchanges with ive; e.g. rathers not tosteve tatainage as a corporate (fushious) a our for him who desires it (i. 614).

un-kis 1 (not any one) is found in V. only, being almost restricted to the RV., where it frequently occurs. It properly

 $^{^3}$ N, sing, of interrogative ki (Lat. quist) of which the n. ki-m is in regular use (ep. 113).

means no one; e.g. nakir indra tvad úttarah no one, O Indra, is superior to thee (iv. 301): yatha kéminam nakir nechisyntai that none of the worms shall be left (AV. ii. 313). Losing its N. sense,1 it comes to be used, though less often, as a strong negative adverb meaning not at all, never; e.g. vásva šárman nákir devá váráyante ná mártáh in whose protection gods never hinder him nor mortals (iv. 1710). Op. mākis.

ná-kim " occurs only twice in one hymn of the RV, in the sense of a strong negative adverb = not at all, never : nakim indro nikartave Indra cun never be subdued (viii, 783).

ná-nu occurs only twice in the RV, where it has the sense of a strong negative = by no means, never. In B. it occurs a few times as an interrogative expecting assent (= nonne). not?; e.g. nánu susruma have we not heard? (SB.).

na-hi, as the compounded form of na hi, occurs only in V. where it sometimes has the sense of for not; e.g. nahi tva šátruh starate for no foe strikes thee down (i. 1294). More commonly it emphatically negatives a statement as something well known = certainly not, by no means, as appears most clearly at the beginning of a hymn; e.g. nahi vo asty arbhako, dévasah not one of you, O gods, is small (viii, 301).

o. This compounded form never occurs in B., where ná hí alone is found. On the other hand, na hi seems never to occur in Y,

nama is used adverbially in the following two senses:

1. by name; e.g. sá ha śrutá indro náma deváh that quá famous as Indra by name (ii. 200); kó nama, asi who art thou by name? (VS. vii. 29). 2. namely, indeed, verily; e.g. ajasro gharmo havir asmi nama I am constant heat, namely the oblation (iii. 287); mam dhur indram nama devata they have placed me among the gods verily as Indra (x. 492).

Probably because the N. has no longer an independent existence coupled with the fact that the pronoun ki has gone out of use except in the one form ki-m.

Probably A. n. of ná-kis with lengthened rowel,

nú or nú means l. now; e.g. sá ny tyato he is now implored (i. 1451); indrasya nú víryáni prá vocam I will now proclaim the heroic deeds of Indra (i. 321); yoja nv. indra, te hári yoke now (= at once), O Indra, thy two bays (i. 821); uvasosa uchae ca nu (i. 483) Dawn has shone (in the past) and she shall shine now (= henceforth); asmabhir ū nú praticáksyā abhūt to us she has just now become visible (f. 11811). 2. still: påsyema nu súryam uccárantam we would still see the sun rising (vi. 525); maham indrah parás ca nú great is Indra and still more (i. 86). 3. proy with interrogatives : kadá ny antár várune bhuvání when, pray (= at last), shall I be in (communion with) Varuna (vii. 86°). 4. ever with relatives: ya nú krnávai whatever (deeds) I shall accomplish (i. 16510). 5. ever, at all with negatives: na asya varta na taruta ny asti there is none al all to obstruct, none to overcome him (vi. 66'). 6. with cid it means (a) even now, still ; e.g. nú cid dadhisva me girah even now take to thyself my songs (i. 10); dasasya no, maghavan, nu oit favour us still, Bountiful one (viii. 4611); (b) never; e.g. nú oid dhí parimamnáthe asmán for never have ye despised us (vii. 98%).

a. The senses of nú found in B. are the following :

1. Now extendly in affirmative sentences, aften correcting a previous statement; e.g. mirdaso nv abhūd, yajasva mā, anena sese he is acheally more than less despe aid; ascrifes him to me (AR.). 2. then, proy, in exhortations with the subj., the impv. or mā with the inj., e.g. śraddhādevo vái mānur; āvām nú vedāva Monu is godformy; let us teo then by kim (ŚR.); mā nu ma prā hāreih proy, de nes strike at ma (ŚR.). When átha follows such sontences, nú may be translated by first: nirdašo nv astv. atha tvā yajai is him (the victim) first is more than ten days old, then I will servifes him to yes (AR.). B. proy, in questions with or without an interrogative; e.g. kvā nu visuur abhūt schat, proy, has become of Vipus I (ŚR.); tvām nú khālu no brāhmiṣtho 'si ors yeu, proy, indeed the schat of set (ŚR.). 4. nese, after iti followed by ātha wert: iti nu pūrvam paṭalam, athottaram thu mos is the first section; mest followe the

⁴ Nover begins a soutance.

² Often begins a sentence.

second (AH.). 5, indeed, in the first of two antithetical clauses, when the second is introduced with to or kim u; e.g. yo nv eva justatásmai brûyad, ná tv évá sárvasmá íva he may indud tek ti to him uho is drougen to hom, but not to any and every one (SB;).

nunam now has three uses in the RV.:

1. With the ind. pres. it means now as opposed to formerly or in future (an opposition often expressed by pura before and aparám after); e. g. ná núnám ásti nó sváh there is no now and no to-morrow (i. 1701),

It is a few times used with the perfect in combination with purå to express that an action has taken place in the past and still takes place; e.g. purá núnám ca stutáya fsinam pasprdhra indre formerly and now the praises of seers have stripen to Indra (vi. 341).

2. With the subj., impv., opt., or inj., it expresses that an action is to take place at once; e.g. vi nunam uchāt she shall now shine forth (i. 1241); prá núnám půrnávandhuras stutó yāhi praised advance now with laden cur fi. 82%.

With the perfect it is a few times used in the RV, to express that an action has just been completed; e.g. upa nûnâm yuyuje hárī he has just yoked his two bay steeds (viii. 411).

3. It occurs sometimes with interrogatives = pray; e.g. kada nunam to dasema when, pray, may we serve thee? (vii. 29%).

e. In B, none of these ness seem to survive, while the new sense of certainly, assuredly (perhaps once already in the AV.) has appeared; e.g. tatha in mindin the han just so assuredly it came to pass (SB.).

néd (= ná id and not treated as a compound by the Padapatha) has two uses in both V. and B. ; I. sometimes as an emphatic negative, certainly not; e.g. anyó nét súrir onate bhuridavattarah no other patron indeed is accounted more liberal (viii, 53); áham vadámi nót tvám I am speaking, not thou (vii. 381); nod anuhūtam prasnāmi I certainly do not est it before it is invoked (SB.). 2. much more commonly as introducing a final clause in order that not with the sabi,

(= Lat. ne); e. g. vy ùchă, duhitar divo, nét två tápăti sûrah shine forth, daughter of the sky, lest the sun scorch thee (v. 79°); nén mã rudró hinásat lest Budro injure me (ŚB.). In B, the verb may also be in the inj.: néd idám bahirdhá yajñád bhávat lest it be outside the sacrifice (ŚB.).

n. nvái (= nú vái as analysed by the Padapātha of the TS.) occurs not infrequently in B. in the sense of tadesf; e.g. iti nvá etád bráhmanam udyate such indeed is the Brithmana that is told (ŠB.).

må is the prohibitive negative (Gk. μή) regularly used with the injunctive. It is never used with the impv.; with the opt. only in the single form bhujema (RV.); and with the subj. only once (SB.); e.g. må no vadhih slay us not (i. 104°); må hrnīthā abhy asmån be not enraged against us (viii, 21°).

a. An interrogative following roll in a low cases receives an indefiulto sense in the RV.; e.g. ma kasmat distant abby amitrino natdeterm as not to any fee (i. 120).

mā-kis (not any one, Gk. μή-τις), occurring about a dozen times in the RV., to which it is restricted, is used in prohibitive sentences with the injunctive in two senses:

 no one: makis tokasya no risat may no one of our offspring be injured (viii, 6711).

 more often an emphatic negative = by no means, never: mākir devānām apa bhūḥ be not at all away from the gods (x. 11°). Cp. nā-kis.

ma-kim, used as an emphatic prohibitive particle with the injunctive, occurs only in two passages of the RV.: makim sam sam sari kevate let none suffer fracture in a pit (vi. 547).

yátra is employed in two main senses: 1. usually as a relative adverb, meaning where, but sometimes whither, e.g. yajñé...náro yátra devayávo mádanti where pious men rejoice in sacrifice (vii. 971); yátra ráthena gáchathab whither ye go with your car (i. 221). The correlative is generally tátra, sometimes átra or tád.

a. Occasionally as equivalent to the locative of the relative; e.g. 4 ghs in gachan attern yugani yatra jamayah kryavann sjami these later generations will come in which those who are akin will do what begis not kineman (x. 1019).

2. not infrequently as a temporal conjunction, when, in both V. and B.; e.g. yétra prá sudásam ávatam when ye helped Sudás (vii. 83°). In V. ádha, átra, tád appear as correlatives; e.g. yátra súrásas tanvó vitanvaté.. ádha smá yacha tanvé táno ca chardíh when the heroes strain themselves (in battle).. then especially bestow protection on us and our sons (vi. 46°). In B. tád is generally the correlative, sometimes tátas; e.g. tám yátra devá ághnams, tán mítrám abruvan when the gods killed him, they said to Mitra (SB.).

yatha has two distinct uses in both V. and B. :

1. as a relative adverb meaning as; e.g. nūnām yāthā purā now as before (i, 39°); yāthā vayām ušmāsi tāt kṛdhi as we wish that do (x. 38°); yāthā vāi puruṣō jiryaty evām agnir āhito jīryati as a man grows old, so fire when it has been laid grows old (TS.). When there is a correlative in the RV., it is usually evā, sometimes tāthā; in B. usually evām, sometimes tāthā.

2. as a conjunction meaning in order that, so that, introducing a posterior clause, generally with the subj., rarely the opt.; e.g. havis kryusva subhágo yáthá ásasi prepare the oblation that thou mayest be successful (ii. 26°); a daívya vryimahé 'vāṃsi, yáthā bhávema milhūse ánāgāḥ (vii. 97°) see crave divine aids that we may appear sinless to the gracious god; tathā me kuru yathā aham imāṃ senāṃ jayāni arrange it so for me that I may conquer this army (AB.); tāthaivā hotavyāṃ yāthā agnim vyaveyāt it must be poured so that it should divide the fire (\$B.).

o. In the KV, after vertee of knowing or saying yatha introduces an explanation — hour; e.g. kae tad bruyad anudéyi yatha, Abhayat make undid fill se this, (viz.) has the gift was? (x. 185). Occasionally it is used thus even without make vertex na gramiye savitur dairyasya

rate.

that yathis visivam bhavanam dharayigyati that (power) of the divine Sanite (is not to =) will not decoy, (viz.) that he will support the whole world (iv. 541).

yad (n. of the relative ya) is used in four distinct senses:

1. that, expanding the meaning of a word in the preceding principal clause; e.g. grue tad, indra, to save yad dhamsi vetram I praise this mighty deed of thine that then slayest Vetra (viii. 623); kim aga asa, varuna, jyéstham yat stotaram jighamsasi sakhayam, what has been the chief guilt.

(i) Varusa, that then wishest to slay thy praiser (who is) thy friend? (vii. 86). This use is not common in V.

n, yad is similarly employed in B. with reference to a preceding tid (often omitted): e.g. til yit payasi driniti: vytro vil some ast that (- the reason why) is mires Some with mile (is) this: Fyron was Some (SB.). This use is also found in B. after certain verbs: ive kalpate it is mitable, fit subate it also, tohical derives, yukto bhavati is inteed so, veda known, and isvará it is possible; e.g. ná hí tid avakálpate yád brhyšt for it is not smitable that he should my (SB.).

- 2. when with the ind. pres., imp., perf., aor., fut., and with the subj.; e.g. yad dha yanti marutah sam ha bruvate when the Maruts go along, they speak together (i. 3715); kam apasyo yat te bhir agachat whom didst thou see when fear came upon thee? (i. 3214); indras ea yad yuyudhate ahis ea, maghaya vi Jigye when Indra and the serpent fought, the bountiful god conquered (i. 3215); eitro yad abhrat bright when he has shone forth (i. 660); tigma yad asanir patati, adha no bodhi gopah when the sharp bolt shall fly, then be our protector (iv. 1617). It also occurs rarely in anaeolutha with the pres. part. and the past pass part, much as in English; e.g. pacanti te vṛṣabhān, atsi teṣām yan, maghayan, hūyamānah they roast bulls for thee, thou eatest of them, O bounteous one, when being called (x. 283).
- s. In B. yad occurs with the sense of man with the press, fut, and now, and in the sense of waterers or while with the impt.
 - 3. if used with the ind. pres., the subj., or the opt.; e.g.

yad, indra, údaň nyag va hūyase, a yahi tūyam (f, O Indra, thou art called above or below, come quickly (viii. 651); yad ūrdhvas tiṣthā dravinā, thá dhattād yad va kṣayah if thou shalt stand upright, beslow treasures here, or if thou shalt the (iii. 81). The opt, is used when it is assumed that the condition will not be fulfilled; e.g. yad, agne, syam aham tvam, tvam vā ghā sya aham, syūs te satya thá asiṣah (f, O Agni, I were thou, or if thou wert I, thy prayers here would be fulfilled (viii, 4423).

- a. In B, yad is used with the opt, as in V. (while with yadi the fulfilment of the condition is usually assumed) and with the conditional; ad yad bhidyets, artim arched yajamanah is it were to treak, the warrifeer would fall tale satisfecture (TS.); yad evam na, avakayo marcha to vy apatrayat is these landst and apolese them, they hand would have fullest to places (SB.).
- 4. in order that, in posterior clauses, with the subj., very rarely with the opt, in V.; e.g. å vaha devátătim śárdho yád adyá divyám yájāsi bring hither the host of the gods that thou mayest adore the divine throng (iii. 194); yán nünám aáyám gátim, mitrásya yáyám pathå that I may now obtain refuge, I would go on Mitra's path (v. 647).
- o. In B. this use of yad is very rare, occurring only a few times with the subj.; e.g. tat prapouhi yat to prapo vatam apipadyatal obtain them this, that the breath many pass into the orbid (SB.).

yada when is used in V. and B. with the ind. perf., impf., pres., and with the subj.; with the sor. ind. and the inj. in V. only; and with the fut. and opt. in B. only. The correlative word (when there is one) is in V. ad, atha, adha, tad, tarhi; in B. atha and tarhi.

1. yadá is most commonly used in the RV, with the acr. ind., when as the beginning of the action is emphasized, the sense is as soon as; e. g. yadód ádevir ásahişta műyű, átha abhavat kévalah sómo asya as soon as he had overcome the ungodly wiles, then Soma became his exclusively (vii. 98°); abhi granti rádho yadá te márto ánn bhógam ánat they

praise thy wealth its soon as the mortal has obtained thy reward (x. 72). When the principal clause contains a historical tense, the nor, with yada has the value of a pluperfect.

a. The injunctive is found only once with yada in the RV: yada manyan didhare bhagam, indra, and in maya kreave viryani when their shall have separed for me my share, O Indra, then then shall perform hereic deeds with my help (viii, 100).

2. n. with the impf. and perf.; e.g. yadā visaus trīni padā vicakramē, yadā sūryam divi . adhāraya, ād it to hārī vavakṣatuh when Visau took his three steps, when thou didst fix the sun in the sky, then the two bays grew in strength (viii. 12⁸⁵⁻³⁰); tāsya yadā mārma āgachann ātha acestat as soon as they touched his weak spat, he quivered (MS.); sā yadā ābhyām anūvāca ātha asya tād indrah šīraš cichēda as soon as he had told them, Indra cut his head off (SB.).

b. with the pres. ind.: yada satyam krnuté manyam indro, viśvam drłham bhayate éjad asmat when Indra shows his true anger, all that is firm, trembling, is afraid of him (iv. 1710); yada vai pasur nirdaso bhavaty atha sa medhyo bhavati as soon as the victim is more than ten days old, it becomes fit for sacrifice (AB.); sa yada keśaśmaśra vápaty átha snati when he has ent off his hair and beard, he bathes (ŚB.).

c. with the subj. (here = future perfect): yadā ārtām kṛṇāvo 'tha jīm enam prā hinutāt pitfbhyan when thou shalt have mude him done, then deliver him to the fathers (x. 161); yadā tām ativārdhā, ātha karşūm khātvā tāsyām mā bibharāsi when I shall have grown too big for it, you shall, having dug a pit, keep me in it (ŚB.).

3 s. with the fut. : yadaiva hota paridhavyaty atha pasau prati moksykmi when the Hote shall have conducted, I shall tighten the cords (AB.).

 with the opt. : så yadå samgrämsim jäyed åtha, aindrägnin nir vapet us zoos as he may hars som a battle, he should sacrifice to Indee and Agai (MS.).

yadi if (sometimes when with a past tense) is found with perf. and impl. in V. only; with the ind. press, nor., fut.,

and with the subj. in V. and B.; and with the opt. in B.

L With the perf. used historically and with the impf. yadi means when, the verb then having the force of a pluperfect; e.g. ud astambhit samidhā nākam agnir yadi bhṛgubhyah pāri mātarišvā havyavāham samīdhē Agni supported the rault with fuel when Matarišvan from the Bhṛguz had kindied the oblation-bearer (iii. 510); yādi sahāsram mahiṣān āghah, ād it ta indriyām māhi prā vāvṛdhe when thou hadst eaten a thousand bulls, thy might grent great (viii. 123). But when the perf. has the pres. perf. sense, yādi has its ordinary meaning of if: grāhir jagrāha yādi vaitād enam, tāsyā, indrāgnī, prā mumuktam enam or if illness has seized him, from that release him, Indra and Agni (x. 1614).

2. a. with the pres.: yádí mánthanti bahúbhír vi rocate when they rub with their arms, he shines (ii. 29"); adyá muriya yádi yatudháno ásmi lo-day I would die, if I am a sorcerer (vii. 10415); yádi ná uánáti pitrdevatyó bhavati if he does not eut, he becomes dedicated to the Manes (ŚB.).

b, with the nor, ; yadi matur upa svasa. . asthita, adhvaryur modate if the sister (coming) from the mother has approached, the priest rejoices (ii, 5°); yady aha enam prancam acaisir, yatha paraca asinaya prethato unadyam upaharet if you have yiled it fronteays, it is as if one handed food from behind to one silting with averted face (SB.).

c. with the fut: yady eva karişyatha, sakam devair yajniyaso bhavişyatha if ye will act thus, ye shall become objects of worship together with the gods (i. 161°); yadi va imam abhimamsyé kaniyó 'nnam karişye if I shall plot aguinst him, I shall procure less food (SB.).

d. with the subj.: yájáma deván yádi šaknáváma wa will worship the gods, if we shall be able (i. 27¹³); yádi stómam máma śrávad, asmákam indram indavah... mandantu if he shall hear my song of praise, let our drops gladden Indra (viii. 110); yadi tva otat punar bravatas, tvam brutat if they two shall say that to thee again, do thou say (SB.).

a. With the opt. yadi is (excepting one occurrence in the SV, found in B, only, where this use is very common. Here a case is usually exposed with a rule applicable to it in the principal clause; a. g. yadi na saknuyat, so gnaye purojasan nir vapet if as absold not be able to do it, he should offer a cake to don! (AB.).

3. after the verb vid know, yadi is used in the sense of whether in one passage of the RV. (x. 129°) and often in B.; e.g. hanta na éko véttu yadi ható va vrtró fivati va come, let one of us find out whether Vrtra is dead or whether he is alipe (SB.).

a. yadi va le not only used after a preceding yadi in the sense of or if, but also alone in the sense of or, nearly always without a verb; e.g. so night veda yadi va na yadi so alone hance or he does not know (x. 1297); yam vahanti datam asva yadi va sapta ukon a handred heren drane, or seve (AV, xuii. 37); yadi va hitaratha or conserving (SB.).

yarhi (at the time) when occurs only in B., where it is meet with the press or past ind., and with the opt. It has almost invariably tarki or starki then as a correlative; e.g. as tarky eva jayate yarky agains adhatté he is bout of the moment when he have his five MS.); yarki prajáb kuddham nigácheyus tárhi navarátréna yajeta when his people should suffer from hanger, he should accritic with the rife of none nights (TS.)

yaunād does not occur as a conjunction in V., but it sametimes appears as such in B. mesning con; e.g. atha yaunāt samistayajūnasi nāma con (follows the reason) why may are subal Samistagajan (SB.)

yad (an old abl. of ya) is found in V. only. It is used with the indicative press or past, and with the subj. With the ind. it means as far as in the RV.; e.g. áreamasi yad evá vidmá tát tvá mahántam (vi. 21°) we praise thee, the great, as far as we know (how to); it seems to mean since in the AV.; yá áksíyan pythívím yad ájáyata who ruled the earth since it arose (AV. xii. 1°7). With the subj. yád means as long as; e.g. ananukytyám apunás cakára yát súryámása mithá uccárátah he has ence for all done what is inimitable as long as sun and moon alternately shall rise (x. 68°).

yavat already appears in V. as an adverb meaning as for as, as long as, an extension of its acc. use; e.g. yavad dyavaprthivi tavad it tat (x. 114°) as far as leaven and earth, so far it (extends); juhomi havyam yavad ise I offer oblation as long as I am able (iii. 18°); ajato vai tavat puruso yavad agnim na adhatte man is so long unborn, as he does not lug his fire (MS.).

vā or is employed much in the same way as ca and. It is enclitic, following the word to which it belongs; and it connects words, clauses, or sentences; e.g. āta ā gahi divô vā rocanād ādhi come from here or from the shining realm of heaven (i. 6°); yasya bhāryā gaur vā yamau janayet whose wife or cone hears theirs (AB.); prāti yāh sāsam invati, ukthā vā yō abhigṛnāti who promotes the law or velcomes songs of praise (i. 54°).

n. vā...vā is frequently used in the same way; e.g. šākti vā yāt to cakymā vidā vā that see have aftered to these according to our power or tracecloses (i. 31%; nāktam vā hi divā vā vārsati for it rains by night or by day (TS.); yād vā "ahām abhidudroha yād vā ispā utā, ānriam velat mī i hare plated er vēlat i hare moves falmig (i. 25%).

b. But vit, vit also mean either, or. When they contrast two primaigal centences in this sense, implying exclusive alternatives, the verb of the first is accented even when the second is incomplete; e.g. shape vit the pradictate some if vit dadhate nirreter upsathe by some either delicer there to the serpent or place them in the lap of dissilution vit. 104°); taid vit jajinat taid vit halfant she after uprocd to it or this test agree to it (SB.); they we taken make a the agree of the second of these pack his heart, or in them x, 104°.

vava doubtless a contraction of two particles) is found in B. only. It emphasizes the proceding word in the sense of criminly, just, being particularly frequent in the first of two correlated clauses; c. g. ess vava so gair ity that that is certainly the same Agai, they say (TS.).

vái is an emphasizing particle meaning truly, indeed.

 In the RV, this particle occurs only in 28 passages, in all but three of which it follows the first word of the sentence; e.g. bhadram vai varam vrnate buly they make a good choice (x. 164°); iti va iti me manah so, indeed, so is my mind (x. 110°); na vai strainani sakhyani santi there are, indeed, no friendships with women (x. 9515). The atress is laid on the whole sentence, not on any particular word. The particle is often followed by u (vā u) without any perceptible change of meaning.

ii. In the AV, the use is similar except that here the particle often appears after a demonstrative or a relative; e.g. themsel value parabhavat therefore, codess, he perioded (xi, 4½); yo val the vidyat pratyakamp, an va adya mahad vadet observe more large them planely, he verily, may speak along to due (xi, 8).

2. In B. vái usually occupies the same position, but often yields the second place to céd, hi, khálu, and of course always to the enclitics iva, u, ca, ama, ha. When atho begins a sentence vái occupies the second place.

Here the use of vái in the first sentence of a narrative is typical; e.g. yāmo vā amriyata: tó devā yamyā yāmam āpābruvan Yama died: the gods (then) dissuaded Yama from (thinking of) Yama (MS.).

a. The particle often appears in the concluding sentence in discussions; e.g. isamed ve aps upa apriati that is, indeed, who he supermiter (SR.).

It is very often placed after the first word of a sentence that gives the reason for the one that follows; e.g. traddhidevo valuations: twim not wadden one that follows; e.g. traddhidevo valuations: twim not wadden one to god-fearing; we have entitled in this way the clause containing it is often equivalent to a parenthetical one; e.g. to vayim abruvan (syam valuation to a parenthetical one; e.g. to vayim abruvan (syam valuation yayin parate) vayo tram idem viddhi, (ti they said to Vape (now Vayit ya parate) vayo tram idem viddhi, (ti they said to Vape (now Vayit ya parate) vayo tram idem viddhi, (ti they said to Vape (now Vayit ya parate) vayo tram idem viddhi, (ti they said to Vape (now Vayit ya parate) frequent in periods of three clauses, when that with valuentines the reason, and that with evaluation the reason, and that with evaluation the reason, and that with evaluation the sain abhavan they serve to the conclusion; e.g. til ottichis tanibbih aim abhavan they serve to the sain abhavan they serve to the sain abhavan they serve therefore the their sain abhavan they serve therefore the sain abhavan they serve the sain abhavan they sain abhavan they serve the sain abhavan they sain abhavan they

7. The differences between the use of var and of eva in B: are the following: var coming after the first word emphasizes the whole sentence, while eva emphasizes a particular word in any part of the sentence; var follows the first word of a sentence beginning a narrative, eva never does; in a period val is typical in the clause stating a reason, eva in that expressing the conclusion.

så is often used pleonastically before relatives in B.; e.g. så yó no väcsin vyährtäm mithunéna na anunikrämät, så sårvam pårå jayätai he who shall not follow the word utbred by us with (another of) the corresponding gender, he shall lose verrything (SB.). This use led to så being employed in a formulaic way not only pleonastically but also without reference to gender or number; e.g. täsya täni sīrsāni prā cicheda. så yàt somapānam āsa tātah kapiñjalah sām abhavat he struck off his heads. Now that which had been Soma-drinking, from that arose the francoline partridge (SB.); så yādi nā vindānti kim å driyeran now if they do not find it, who should they mind? (SB.).

sim is an enclitic particle restricted to the RV. Originally the acc. sing, of a pronoun, related to så as kim to kå, it is generally used (much like im) as an acc. of all numbers and genders in the third person—him, her, it, them, representing a substantive (which sometimes follows) and frequently placed between a preposition and its verb, occasionally also after a relative; e.g. påri sim nayanti they lead him around (i 95°); prå sim ädityö asrjat the iditya made them (the streams) to flow (ii. 28°); mi sim vytråsya märmani våjram indro apipatat Indra has caused it, his bolt, to fall on Vytra's vital spot (viii, 100°); yåm sim åkravan tåmase viproe, tåm såryam schom they created to disperse the darkness, that sun (iv. 13°).

u, aim sometimes gives the relative the same of ever; r. g. yat sim figus oakyma, starathan tat wanteer sin us have committed, remore that (r. 85%).

sú, sú well, used asseveratively = thoroughly, fully, verily and always referring to the verb, is almost restricted as an independent particle to the Samhitās, being common in the RV., but rare in the others; e.g. jugásva sú no adhvarám thoroughly enjoy our sacrifice (iii. 24°); námah sú to homugs verily (be) to thes (VS. xii. 68); jarám sú gacha go safely to old age (AV. xix. 24°).

a. With preceding a the particle means right soil; imit a su sendal girah hour then songs right soil (1, 26°); vidmo av anya mataram see knowfull soil his mother (AV, i. 2°).

b. With preceding ma it - by no means, and at all, name; e.g. mo en two . . . amain ni riraman let none by my menne keep thee from its

(vil. 321).

s, will kam is used like the simple at except that it appears with the impy, only; e.g. tiethats . . . at kam stand quite with (1, 1915).

sma, an enclitic, slightly emphasizing particle, has two senses in the RV.:

- 1. It generally emphasizes:
- a. demonstrative or personal pronouns, relatives, or nouns, and may be rendered by just, especially, or simply by stress; e.g. tásya ama prävitā bhava be his helper (i. 12%); sá árudhi yáh smã pṛtanāsu kāsu cit... sūraih sváh sánitā hear thou, who especially in all battles with heroes dost win the light (i. 1292).
- h the verb, which or (if it is compounded) the preposition of which it follows (generally at the beginning of the sentence); e.g. smass sma vayam esam we are indeed theirs (i. 3710); a sma ratham tisthasi than mountest indeed upon the car (i. 5112). The verb is in the present ind. or the impv., rarely the perf.; it appears to have been accented before sma judging by the only example (vi. 4411) in which it is not the first word in the sentence (App. III, 19 A).
- a. adverbe and particles; e. g. utá sma und especially: ná sma and mã sma by no oceans,
- a In the AV, these amphasizing uses are similar; but in B. they have satiraly disappeared.
- 2. In a few instances sma occurs in the RV, before pura with the pres, ind. to express that an action has habitually taken place in the past down to the present time; e.g. ye ama pura gatuyanti scho have always uided = who aids now and formerly did so (i, 169°).
- a This use is not found in the AV., but has become extremely commun in B., where smalls always proceeded by ha. The meaning

here expressed is that something habitually took place in the past (but does not as in the RV, include the present); e.g. na ha sma vai pura aguir aparasuvrknam dahati formerly Agui ussal not to how what

was not begoed off with the age (TSA).

b. Much more frequently, however, pura is left out and the particles ha mma, from their frequent association with it, assume its meaning ; s. g. té ha sma yád dová ásurah jáyanti, táto ha ama, ová. enan punar upóttisthauti ne often ne the gode defeated the Assens, the latter always opposed than ogain (SE). This use of he can is very common with the present perfect aha; w.g. etad dha ama va aha naradah with regard to this Narada used to say (MS.). Other tenses than the present with ha ama are found in the AB, where, in two or three passages, the perf. and the impf, are used with them in the isimo senso.

svid is an enclitic particle emphasizing the first word of a sentence, usually an interrogative pronoun or adverb. It may generally be translated by pray; e. g. kah svid vrkso nisthito madhye arnasah what tree, pray, was that which stood in the midst of the sca? (i. 1827). In one passage of the RV, this particle gives the interrogative an indefinite meaning: mata putrasya caratah kva svit the mother of the son that wanders who knows where (z. 3410). Very rarely (in double questions) the particle appears without an interrogative: ásti svín nú víryám tát ta, indra, ná svíd asti: tád rtutha vi vocah is this thy heroic deed, O Indra, or is it not: that declare in due season (vi. 183).

a. In a few instances avid appears in non-interrogative sentences: tvává ha svid vujá vavám abhí smo vájasátaye mith ther ut companion are are equipped for the obtainment of heavy (with 102%).

t. The employment of avid in B. is similar; e.g. kám u svid átó dhi varam varisyamahe schul boost, proy, beyond this shall tes choose? (MS.); tvám svín no bráhmistho 'sl mt (hau, pray, the sand lumned of as? (SB.); yad angareau Juhoti tat avid agnan juhoti sekat ha pours

on the coals, that Realf he pours on the fire (MS.).

ha, an enclitic particle occurring after all words capable of beginning a sentence, has a slightly emphasizing and asseverative force. It is probably identical in origin with gha, but unlike that particle hardly ever (only twice) appears in the RV, with its vowel lengthened. It is common in the RV, occurring after personal, demonstrative, interrogative, and relative pronouns, nouns, verbs, verbal prepositions, and adverbs.

- a. In B. the use of this particle varies in frequency; it is comparatively rare in the TS., where it generally appears with ama or with perfects; while in the SB. it is extremely frequent. It lays stress on the first word of sentences so us to emphasize the communicator to mark a new or important step in the narrative; e.g. its marinrylyces: Ajarasam ha cakyuşman bhavati ya evan vede with these scores he should must this eyes): so till old age he who knows this become possessed of rision (AB.).
- 8. It is very often u=d after the first worst of a story with or without vai. It appears predominantly with the perfect in these parts of the SB, and the AB, that narrate with the perfect, mostly with verbs of speaking. Thus sa ha, uvaca appears here, while so bravit is said alsowhere.

hanta occurs three times in the RV. as an interjection in exhortations; e. g. yajamahai yajfiiyan hanta devan come, we will worship the adorable gods (x. 53%).

 It is similarly used in B.: hants_imam valuam sambharame sail, on not prepare the successed (AB.).

hi, in origin probably an emphasizing particle, is used throughout as a subordinating conjunction which regularly throws the accent on the verb. It nearly always follows the first word of the sentence, or the second when the first two are closely connected. In V. it is used in two ways:

- in indicative sentences (the verb having sometimes to be supplied) to express the reason (like γάρ), meaning either for, if the clause containing it follows, or because, since, if it precedes; e.g. bâlam dhehi tanûşu no, tvâm hi baladâ âsi bestow strength on our bedies, for thou art a giver of strength (lii. 5818); âruştîvâno hi dââûşe devâs, tân â vaha since the gods give car to the pious man, bring them hilber (i. 452).
- in exhortative sentences, mostly with the impv., as an emphatic particle = pray, indeed; e.g. yukşva hi keśina hari pray burness thy two long-manual bay steeds (i. 10%).

m. In B. three uses of hi may be distinguished:

1. It expresses the reason, as in the first use in V., only that the clause containing hi always follows (-for only), and the verb is much oftener amitted than expressed; e.g. tad indro 'muoyata, devo hi sah from that Indra freed kinnelf, for he (la) a god (Sh.). The particle vai as often added to strengthen hi; e.g. vairo hi va apah for scater is indeed a themselval (Sh.).

2. It is sometimes employed to emphasize an interrogative = pray;

e g, katham hi karisyasi how, prop, soft these do it ? (SB.).

3. It expresses assent in answers after a word repealed from a preceding question; s. g. tâm eva tvâm pasyasi, iti; tâm hi sio sou set him ** Fes. (I see) \$1m (SB.).

- a. In B., when hi appears in the relative clause of a period explaining a previous statement, the verb of the principal clause to which hi properly applies) is sometimes irregularly unaccented; e.g. Idays hi yadd varsaty athe, osadhayo jayanto for, when it reins here, then the plants spring up (SB.).
- 181. A certain number of words having the nature of interjections occur in the Samhitas. They are of two kinds, being either exclamations or imitative sounds.
- a. The exchanations are: bût (RV.) Iruly, bata (RV.) alas! hânta come, used exhortatively with the subjunctive and hayé come before vocatives; hiruk and hurûk (RV.) neag! hâi (AV.) ho!
- b. Interjections of the onomatopoetic type are: kikirå (RV.) used with kr = make the sound kikirå = tear to tatters; kikkirå (TS.) used in invocations; ciścå (RV.) whiz! (of an arrow), used with kr make a whizzing sound; phát (AV., VS.) crash! phát (AV.) splash! bål (AV.) dash! bhúk (AV.) bang! śål (AV.) clap!

CHAPTER VI

NOMINAL STEM FORMATION AND COMPOUNDS

A. Nominal Stems.

182. Declinable stems, though they often consist of the bare root (either verbal or pronominal), are chiefly formed by means of suffixes added to roots. These suffixes are of two kinds; primary, or those added directly to roots (which may at the same time be compounded with verbal prefixes); and secondary, or those added to stems already ending in a suffix and to pronominal roots (which are thus treated as primary stems).

1. Primary Derivatives as a rule show the root in its strong form; o.g. vêd-a m. knowledge (vid know); sar-ana u. running (/sr); kar-á making (/kr); grabh-á m. seizer (Vgrabh). In meaning they may be divided into the two classes of abstract action nouns (cognate in sense to infinitives) and concrete agent nouns (cognate in sense to participles) used as adjectives or substantives; e.g. ma-ti f. thought (man think); yodh-a, m. fighter (yudh fight). Other meanings are only modifications of these two; e.g. dana (= da_ana) n. act of giving, then gift.

a. When the bare root is used as a declinable stem, it usually remains unchanged; e.g. då m. giver, bhid f. destroyer, yúj m. companion, spás m. sou, vydh adj. strengthening. Roots ending in i or u take a determinative t; e.g. mi-t f. pillar, stu-t f. praise. The root may appear in a reduplicated form ; e.g. cikit wise, jó-gū singing aloud.

b. Several primary nominal suffixes connected with the verbal system have already been sufficiently dealt with, viz. those of the pres, and fut, participles; ant (85; 156), ana and mana (158); of the perf. act. part.: vams (89; 157); of the perf. pass. part.: ta and na (160); of the gerundive: ya, ayya, enya, tva, tavya and aniya (162). The formation of stems to which the primary suffixes of the comparative and superlative, lyams and istha, are added has also been explained (88; 108, 2). Of the rest the following in alphabetical order are the most usual and important:

a: e.g. bhāg-ā m. share (v bhāj); megh-ā m. cloud (mih discharge water); cod-ā m. instigator (v cud); sārg-a m. emission (v srj); nāy-ā m. leader (v nī), priy-ā pleasing (v prī); hav-ā m. invocation (v hū); jār-ā m. lover (v jr); ve-vij-ā quick (vij dart), carā-car-ā far-extending. The substantives are almost exclusively m.; but yug-ā n. (Gk. Cvy-6-v; Lat. jug-u-m).

an: m. agent nouns and about a dozen defective n. stems; e.g. ukṣ-án m. ox, mūrdh-án m. head, ráj-an m. king; ás-an n. blood, áh-an n. day, ud-án n. waler, údh-an n. udder.

ana; n. action nouns: bhój-ana n. enjoyment (bhuj), sád-ana n. seut (sad); kár-ana n. deed (kr); háv-ana n. invocation (hū); bhúv-ana n. being (bhū), vrj-ána n. enclosure; also m. agent nouns: e.g. kar-aná actice, mád-ana gladdening (mad), sam-gám-ana assembling; tur-ána speeding.

anā: f. action nouns: jar-aņā old uge, yóṣ-aṇā woman, vadh-ánā slaughter. This is also the f. form of adjectives in ana; e.g. tur-áṇā speeding.

ani: f. action nouns, and m. f. agent nouns; e. g. ar-ani f. firestick, vart-ani f. truck; cars-ani active; ruruks-ani willing to destroy (from des. stem of ruj destroy).

The second half of this suffix, iya, is secondary, but the whole is employed as a primary suffix (162, 6).

¹ The second part, ya, of this suffix is secondary (182, 2), but the whole is employed as a primary suffix (162, 5). The first part, tax, is probably derived from the old infinitive ending taxe (p. 192, 4).

as: n. action nouns (with accented root) and agent nouns (with accented suffix); e.g. ap-as n. work (Lat. op-us), ap-as active; raks-as n. demon, raks-as m. id.

ā: f. action nouns (from roots and secondary conjugation stems); e. g. nind-å blame; ji-gi-ş-å desire to win; gam-ay-å

causing to go; asva-y-a desire for horses.

i: action nouns (nearly always f.); agent nouns (adj. and subst.); and a few neuters of obscure origin; e.g. kṛṣ-i f. tillags, āj-i m. f. contest; cakṛ-i active (√kṛ), śūc-i bright; pāṇ-i m. hand; ākṣ-i n. cyc. asth-i n. bonc, dadh-i n. sour milk.

is: n. action nouns (mostly with concrete sense); e.g. arc-is flame, jyót-is light, am-is raw flesh, barh-is straw.

u: agent nouns, adj. and subst. (mostly m., but several f. and n.); e.g. tan-ū thin (Lat. ten-u-i-s); bāh-ū m. urm (Gk, πῆχ-υ-s), pād-ū m. foot; hán-u f. jaw; jān-u n. knee (Gk. γόν-υ).

una: adj. and m. n. subst.; e.g. tár-una young, dhar-una supporting, m. n. support, mith-una forming a pair, m. couple;

vár-una m. a god, šak-uná m. bírd.

us: n. action nouns and m. agent nouns; e.g. dhan-us n. hore; jay-us victorious; van-us m. assailant.

ū: f., mostly corresponding to m. and n. in u; e.g. tan-u body; dhan-u sandbank (n. dhan-u); independently formed: cam-u dish, vadh-u bride.

ka (rare as a primary, but very common as a secondary suffix): adj. and m. subst.: śūṣ-ka dry; át-ka m. garment. śló-ka m. call, sto-ká m. drop; vŕśc-i-ka m. scorpion.

ta: besides ordinarily forming perf. pass. participles, appears, in a more general sense, as the suffix of a few adjectives and of substantives with concrete meaning; e.g. trs-tâ rough, śi-tâ cold; dû-tâ m. messenger, gár-ta m. car-seat, már-ta m. mortal, hás-ta m. hand; ghṛ-tá n. ghee, nāk-ta n. night; with connecting i: ás-i-ta black, pal-i-tá grey, róh-i-ta red.

ti: chiefly f. action nouns; e.g. iş-ti desire, ü-ti aid (-/av), kir-ti praise (kṛ commemorate), ră-ti gift; iṣ-ti affecing, gă-ti malion, dă-ti! gift; didhi-ti devolion (dhi think); amh-a-ti distress, âm-a-ti indigence. It also forms some twenty agent nouns used either as adjectives or as m. substantives; e.g. ră-ti willing to give, văṣ-ți cager; jñā-ti m. relative, dṛ-ti m. skin, dhū-ti m. shaker, muṣ-ți m. fist, sap-ti m. steed, abhi-șți m. helper (but abhi-șți f. help); âm-a-ti poor, ar-a-ti m. sereant, vṛk-ā-ti m. murderer.

tu: chiefly forms the stem of dat, abl.gen., and acc. infinitives; e.g. då-tu: D. då-tave and dåtavåi; Ab.G. då-tos; A. då-tum; also a few independent action neuns and still fewer agent neuns: ό-tu m. wefl (vā weave), tån-tu m. thread; ak-tū m. ray (añ) anoint), r-tū m. season, jan-tū m. creature; vás-tu f. morning (vas shine); vås-tu n. abode (vas dwell: Gk. άσ-τν).

tr: agent nouns, often used participially governing an acc. (when the root is generally accented); e.g. gán-tr going to (acc.), but kar-tr m. doer, yas-tr sucrificer (/ ya)), us-tr ploughing hall; less commonly with connecting vowel: cod-i-tr instigator, sav-i-tr stimulator; ä-mar-i-tr destroyer; tár-u-tr winning, tar-u-tr m. conqueror; var-ū-tr protector; man-ó-tr and man-o-tr inventor. This suffix also forms several names of relationship; e.g. pi-tr m. futher, mā-tr f, mpther (101).

tnu forms more than a dozen agent nouns, mostly adj.; e. g. ky-tnú active; přy-a-tnú reviling; měday-i-tnú intoxicating, stanay-i-tnú m. thunder.

tra: agent nouns, a few of them adjectives, the rest nearly all n. substantives, expressing the instrument or means;

This word when the final number of a compound is reduced by syncope to tit: bhaga-tit f, o(f) of farium, maghá-tit f, rereiot of bonder, wisn-tit f. receipt of scalls.

e.g. jái-tra victorious, yái-a-tra adorable; kṣé-tra n. field, på-tra n. cup, vás-tra n. garment; khan-i-tra n. shovel. There are also a few masculines, as dáms-tra tusk (damś bite), mán-tra prayer, mi-trá friend (but n. friendship).

trā: eccurs a few times as the f. form of the preceding: as-trā goad (as reach), mā-trā measure (Gk. μέ-τρο-ν).

thn: action nouns, more often m. than n.; e.g. gā-thá m. song, bhṛ-thá m. ndering, rá-tha m. car, há-tha, m. slaughter; ár-tha' n. goal, uk-thá n. saying (√vac), tìr-thá n. ford (√tř cross), rik-thá n. inheritance (√ric); with connecting vowel: uc-á-tha n. praise, stav-á-tha m. praise.

tha: occurs a few times as the f. form of tha: kaş-tha course, ga-tha song, ni-tha trick.

na: besides ordinarily forming perf. pass. participles (160, 1) appears as the suffix of a number of adjectives (f. nā) and substantives, the latter mostly m., a few n.; e.g. uṣ-ṇā hot, kṛṣ-ṇā black, nag-nā naked; budh-nā m. hottom, yaj-ñā m. sacrifice, vār-ṇa m. colour; par-ṇā u. wing, vas-nā n. price-

nā: as the f. form of na makes a few substantives: tṛṣ-ṇā thirst, dhé-nā cow, sé-nā missile, sthū-ṇā post.

ni; m, and f, action and agent nouns (some of the latter mij.): yó-ni m. receptacle, jūr-ņi f. heat; pfś-ni speckled, pro-ņi loving (/ pri), bhūr-ņi excited; ag-ni m. fire, váh-ni m. straught unimal.

nu: action and agent nouns (including some adjectives), nearly always m.; e.g. ksep-nú m. jerk, bhā-nú m. light, sū-nú m. son; dhe-nú f. cow; då-nu n. drop (m. f. demon).

ma; adj. and (almost exclusively m.) substantives; e.g. jih-må oblique, šag-må mighty; idh-må m. fuel, ghar-må m. heat, stó-ma m. pruise, hi-må m. cold; bil-ma n. chip; hi-må f. winter.

man: action nouns (very numerous), most of which are n.

¹ artha occurs often in the RV., but appears only three times (in Mandala X) as a m.; in the later language it is m. only.

accented on the root, while a good many are m. accented on the suffix; e.g. áj-man n. course (Lat. ag-men), nä-man n. name (Lat. no-men), bhū-man n. world, šās-man n. praise (Lat. car-men); jān-i-man n. birth; vār-i-man n. crpanse; bhū-mān m. ahundance, vid-māu m. hnowledge, prath-i-mān m. breadth; also a few rarely used m. agent nouns, mostly accented on the suffix; e.g. vad-mān m. speaker, sad-mān m. sitter; āś-man m. stone (Gk. ās-pan); ļś-man victorious; some of these differ in accent only from corresponding n. action nouns (cp. as); dā-mān m. gieer; dā-man n. gift; dhar-mān m. ordainer; dhār-man n. ordainance; brah-mān m. priest; brāh-mān n. worshīp; sad-mān m. sitter; sād-man n. seat.

mi: adj. and m. (also one f.) subst.: jā-mi related; ūrmi m. wave, raś-mi m. ray; bhū-mi f. varth.

mī: a few f. substantives: bhū-mī earth, lakṣ-mī sign, sūr-mī tube,

yu; a few adjectives and m. substantives; yáj-yu pious, śundh-yú purc, sáh-yu strong; man-yú m. anger, mṛtyu m. death; dás-yu m. enemy, šim-yu m. enemy.

ra: many adjectives, mostly acconted on the suffix; e.g. ug-rā mighty, pat-a-rā flying, aj-i-rā swift; gfdh-ra greedy; vip-ra inspired; also several substantives of different genders (f. rā); e.g. kṣu-rā m. razor, vam-rā m. ant; khad-i-rā m. a tree; āj-ra m. field (Gk. ἀγ-ρό·ς), váj-ra m. thunderbolt, śū-ra m. hero; abh-rā n. elmul, kṣī-rā n. milk; āg-ra n. point, rāndh-ra n. hollow; śūr-ī-ra n. body; dhā-rā f. stream, sū-rā f. intocicuting liquor.

ri: adj. and m. f. subst.; e.g. bhū-ri abundant, vådh-ri emasculated; jás-u-ri exhausted; ángh-ri m. fool, sū-ri m. patron; ás-ri î. edge, ús-ri f. dawn; ang-u-ri f. finger.

ru: adj. and a few n. substantives: câ-ru dear (Lat. ca-ru-s), bhī-rū timid; pat-á-ru flying; vand-á-ru praising; san-é-ru abtaining; áá-ru n. tear, śmák-ru n. beard.

va: adj. and (mostly nr.) substantives; e.g. ūrdh-vá

(Gk. opt-6-s), pak-và ripe, pur-va preceding, săr-va all (Lat. salva-s); ă\$-va m. harse (Lat. eq-au-s), sru-vă m. ladle; ăm-î-vă f. disease.

van: adj. and subst. (mostly m., few n.); e.g. fk-van praising, kft-van actice, yaj-van sacrificing; adh-van m. road, gra-van m. stone; par-van n. joint.

sa: adj. and subst. (all genders); e.g. gft-sa udroit, pṛk-ṣā dappled (/ pṛc): mah-i-ṣā mighty; ṛj-i-ṣā rushing; ar-u-ṣā rud; út-sa m. fountain, drap-sā m. drap, pūru-ṣa m. man; pūr-i-ṣa m. rubbish; man-i-ṣā f, devotion.

snu: adj. (from root or caus. stem); a. g. ji-şnú victorious; vadh-a-snú murderous; car-i-şnú wandering; māday-i-şnú inforiculing.

2. Secondary nominal Suffixes.

The great majority of these form adjectives with the general sense of relating to or connected with.

a: forms a large number of adjectives expressing the sense of relation to or connexion with the primitive word; many of them have in the m, become appellatives and in the n, abstract nouns. The first syllable in the great majority of instances is strengthened with Vrddhi (the f. then always takes i); e.g. marut-a relating to the Maruts (marut); daiva divine (devá god); parthiva curthly (prthivicusth); manav-à belonging to man (man-u), m, human being; tanv-a belonging to the body (tanu); dasaraja-a n, battle of the ten kings (dasa-rājan); maghon-a n, bountifulness (maghávan bountiful); without Vrddhi: bhesaj-a adj. healing, n, medicine; sakhy-a n, friendship (sakhi friend); hotr-a n, office of priest (hôtr).

ă: forms the f. of adjectives which in m. and n. end in a; e.g. năvă f., năva m. n. new; priy-â f., priy-â m. n. dear; gată f., gată m. n. gone.

ani: forms the f. of names of male beings in a, or f, personifications; e.g. indr-ani wife of Indra, mudgal-ani

wife of Mudgata; arany-ani nymph of the Forest (aranya); urj-ani Strength (urj strength).

âyana: forms m. patronymics with initial Vrddhi; e.g. kāņv-āyana descendant of Kanva.

i: forms m. patronymies, with initial Vrddhi, from nouns in a; e, g. páurukuts-i descendant of Purukutsa; sâmvaraņ-i descendant of Sameurana. Similarly formed is sârath-i m. charioteer (from sa-rátha driving on the same chariot).

in; forms numerous adjectives, in the sense of possessing, almost exclusively from stems in a; e.g. ark-in praising (ar-ká praise); from other stems; arc-in radiant (arc-ibeam), var-m-in clad in armour (vár-man); irregularly formed; ret-in abounding in seed (rét-as), hiran-in adorned with gold (hiran-ya).

iya (= ya after conjunct consonants): forms adjectives of relation; e.g. abhr-iyá derived from the clouds (abhrá), indr-iyá belonging to Indra, samudr-iya oceanic.

i: forms the £ of m. stems made with suffixes ending in consonants (95), or with tr (101 s), and often of stems in u (98 c) or in a (always when formed with Vrddhi); a.g. ad-at-i cating, av-i-tr-i protectress, prthv-i broad (prthu), dev-i goddess (dev-a). Cp. 107.

ins: forms adjectives, chiefly expressive of direction, from the weak stem of derivatives in afic; e.g. arvāc-ins turned towards (arvāne hitherword); also others expressing the general sense of relation; e.g. viśvajan-ina (AV.) containing all kinds of people.

Tyu: forms general adjectives, chiefly in the later Samhitas; e.g. grhamodh-iya relating to the domestic sucrifice, parvatiya mountainous; ähavan-iya used for the oblation (ā-hāvana), as a m. sacrificial fire (AV.).

eya; forms m. patronymics as well as a few general adjectives; e.g. ādit-eyá m. son of Aditi; páurus-eya relating to man (púrusa). ka: forms adjectives and diminutives; e.g. ánta-ka making an end (ánta), dúra-ká distant, máma-ka my: pāda-ka m little foot, rāja-ká m. kinglet; with Veddhi and connecting i: vásant-i-ka belonging to the spring (vasanta). The f. of some of the diminutives is formed with ikä; e.g. kumār-iká t. little girl (kumāra-ká m. little bog).

tana and (its syncopated form) that form adjectives with a temporal sense from adverbs and prepositions; e.g. nu-tana and nu-tana present (nu now); sana-tana and sana-tana eternal (sana from of old); pra-tana ancient (pra before).

'tama: forms superlatives (from nominal stems and the prep. úd) and ordinals; e.g. puru-táma rery many; ut-tamá highest; šata-tamá hundredth.

tara: forms comparatives from adjectives, substantives, and the prep. ud: tavas-tara stronger: rathi-tara better charioteer; ut-tara higher.

tă: forme abstract f. substantives with the sense conveyed by the English suffixes -ship and -ness; e.g. bandhu-tă relutionship, vasu-tă uvalthiness; devă-tă divinity, purușătă human nature.

tăti and (less often) tât: form abstract f. substantives (like tā); e.g. jyeşţhā-tāti superiority, sarvā-tāti complete welfare (Lat. salu-tāti-); devā-tāt divine service, sarvā-tāt completeness (Lat. salu-tāt-).

tya: forms a few substantives and adjectives from adverbs and propositions: ama-tya m. companion (ama at home); apatya n. offspring; ni-tya constant, nis-tya foreign (nis out).

tva: forms n. abstract anhstantives (like tā); e. g. amṛtatva n. immortality, maghavat-tva liberality.

tvana (= tva-na); forms n. abstract substantives (nearly all of them duplicates of others in tva); e.g. jani-tvana wifehood, sakhi-tvana friendship.

that forms a few ordinals as well as adjectives (from pronounnal stems) with a general numerical sonse; e.g.

catur-tha fourth, sapta-tha seventh; kati-tha the how-manieth?

nī: forms the f. of pati lord and of parasa knotty, as well as of several adjectives in ta denoting colours; thus pat-nī mistress (Gk. πότ-νια), paras-nī a river; ê-nī variegated (é-ta). In a few of the colour adjectives nī is substituted for the final a, while k takes the place of t; e.g. asik-nī black (ás-i-ta).

bha: forms m. names of animals; thus rea-bhá and vrsa-bhá bull; garda-bhá and rása-bha uss.

ma: forms superlatives (partly from prepositions) and a few ordinals; e.g. ava-má lowest; madhya-má middlemost; nava-má ninth (Lat. novi-mu-s), daśa-má tenth (Lat. deci-mu-s).

mant: forms adjectives in the sense of possessing from substantives (except stems in a); e.g. asani-mant possessing the thunderbott, kratu-mant powerfut; go-mant rich in cones, caksus-mant possessed of eyes.

maya: forms adjectives (f. ī) in the sense of consisting of; e.g. manas-máya spiritual, mrn-máya made of clay (mřd).

mna: forms a few n. abstracts from nouns or particles: dyu-mna brightness, su-mna welfare.

ya: forms adjectives of relation, m. patronymies and n. abstracts. Most of the latter two classes take Vrddhi of the first syllable, but only about one-fourth of the adjectives do so; e.g. paśav-yà relating to cattle (paśu); ādityá m. son of Aditi; taugryá m. son of Tugru, but also tugr-ya; ādhipatya n. lordship (ádhipati overlord).

ra: forms comparatives (from prepositions) and ordinary nouns, mostly adjectives; e.g. áva-ra lower; dhûm-rá grey (dhûmá smoke); rath-i-rá riding in a car (rátha).

lu: forms adjectives and a few m. diminutives; e.g. kapi-la (monkey-coloured =) brown, baku-la abundant; vra-la m. little man, sisu-la m. little child.

vat : forms a few f. abstract substantives, almost exclu-

sively from propositions, expressing local position; e.g. ud-vat height, ni-vat depth.

van: forms adjectives in the sense of possessing and a few m. substantives; e.g. maghá-van bountiful, śrusţi-van obedient, samád-van wurlike; áthar-van m. fire-priest.

vant: forms adjectives, from every kind of nominal stem, in the sense of possessing; e.g. asva-vant and asva-vant owning horses; sakhi-vant having friends; visqu-vant accompanied by Visqu; roman-vant havy; payas-vant containing milk. Some of these derivatives, especially those formed from pronominal stems, have the sense of resembling; e.g. ma-vant like me; nr-vant manly. From this sense is derived the use of the n. acc. as an adv. of comparison; e.g. manus-vat like Manus.

vin: forms adjectives from stems ending in a (which is lengthened), a, and as; e.g. ubhaya-vin partaking of both (ubhaya), aştra-vin obedient to the good, yasas-vin glorious. Exceptionally formed are Chrysad-vin bold (chrysat) and vag-vin eloquent (vae).

ša: forms adjectives and m. substantives, sometimes without change of meaning; e.g. éta-śa wriegaled (éta id.), yuvn-śa youthful (yūvan id.), roma-śa honry (roman hair); anku-śa m. hook, kalá-śa m. jar.

183. The above lists of suffixes practically supply the rules of gender for the Vedic noun. These may be summarized as follows:

Speaking generally, bare roots as stems, if action nouns, are f., if agent nouns, m.

Derivative stems in a, i, u are f.; stems in a, t, n may be m. or n.; stems in i and u may be of any gender.

Feminine are all stems formed with the suffixes 5, 1, 1; tā, tāt, tāt, tī, trā.

A Except seven m. stems in 1; see 100; I 5.

⁴ But when stome in it oppose as agent uouns they are in., and in f. as adjectives.

- b. Neuter are all stems formed with is, tva, tvana, and, unless adjectives or agent nouns, those formed with ana, as, us.
- c. Masculine are (in so far as not used adjectivally) all stems formed with the suffixes yu, va; āyana, i, ka, bha, la,
- d. Mase, or fem. are stems formed with the suffixes ni, nu, mi, tr'; also stems formed with the bare root.
- c. Mase, or neut, are stems formed with the suffixes a, ta, tha, na, una, ma, ya, ra, tya, tra, tu, an, man, van; also adjectives formed with in, vin, ina, iya, tana, tama, tara, maya, mant, vant.
 - f. Masc., fem., neut. are stems formed with i or u.

B. Compounds.

- 184. I. Verbal Compounds are formed by combining roots with twenty prepositions and a few adverbs. The compound verb (which, however, in finite forms is actually compounded only in subordinate clauses when the preposition immediately precedes the verb) is conjugated like the simple verb. Thus gam go combines with sam together to sam-gam go together, unite; 3. s. sam-gachati. The compound root can be used to form nominal stems by means of the primary suffixes enumerated above (182, 1); e.g. sam-gam-a m. union.
- a. The prepositions which are compounded with roots are the following: ácha towards, átí beyond, ádhi upon, ánu after, antár between, ápu uway, ápi ou, abhi ugainst, áva down, á a near, ád up, ni down, into, nis out, pára away,

When they are of course m. as well as n.

[&]quot; When they are m.

In patronymies.

^{*} Stoms in tr are always m, when they are agent nouns,

¹ These when used as adj. are occasionally neuter.

^{*} The proposition a reverses the sense of verbs of going or giving ; v. g. a-gam com, a-da note.

pari anund, prå forth, pråti towards, vi asunder, såm together.

b. A few adverbs are also compounded with a limited number of verbs:

aram at hand is combined with kr = serve (dat.), prepare (acc.); with gam = serve; with bhū = serve, conduce to (dat.).

avis openly is combined with as, bhu and kr only; with the two former it means became visible, appear; e.g. avis santi being manifest; avir agair abhavat Agai became manifest; with kr it means make visible, e.g. avis karta make manifest.

tirds aside is combined with bhû be and dha' put only; e.g. ma tird bhût may it not disappear.

puras in front is combined with ky do and dha put only; e.g. kṛṇôtu ratham purah may he place (our) car in the forefront.

śrád, an old word menning heart (Gk. καρδ-ia and κραδ-iη, Lat. cord-), having acquired the character of an adverb, is once combined with kṛ and often with dhā put in the sense of put faith in, credit (= Lat. credo for cred-do), but is nearly always separated from the verb by other words; e.g. śrád namai dhatta believe in him; śrád vikvā vāryā kṛdhi entrust all booms (to us).

pra-dur (before the door) begins to appear in the AV, in combination with bhu = become manifest, appear.

c. A few substantives, after assuming an adverbial character, appear compounded, like verbal prefixes, with participial forms in the AV. These are: asta-m* home with i go: astam-yant selling, astam-eşyant about to set, astam-ita set; namas obeisance with the gerund of kr make: namas-kṛtyn doing homage.

⁴ In the SB, and later tirds is also combined with ky de,

This word is still a substantive in the RV.

In the RV. a few substantives designating parts of the body are compounded with the gerand of grah seize: karnaghya scizing by the car, pada-gfhya scizing by the foot, hasta-gfhya grasping by the hand.

d. The interjection hin is compounded with kr in the sense of utter the sound hin, murmur; e.g. hin-kravati lowing. There are also a few reduplicated interjectional words mostly enomatopoetic and nearly always ending in ä, that appear compounded with bhū and kr; alalā-bhāvant sounding merrily; jañjanā-bhāvant sparkling; malmalā-bhāvant glittering; bharbharā-bhavat became confounded; bibibā-bhāvant craekling; kikirā krau tear to tatters; masmaṣā karam I have crushed; masmasā kuru and mṛsmṛsā kuru crush; akhkhalī-kṛtya croaking.

at The latter compound is the only example in the RV, of a appearing instead of a before ky or bhu. The AV, has vari-kyta n a disease (from rate wind).

II. Nominal Compounds.

185. From the Inde-European period the Vedic language has inherited the power of combining two or more words into one treated like a simple word as regards accent, inflexion, and construction. Both in the frequency and in the length of compounds the Vedic language resembles the Greek of Homer. In the RV, and the AV, no compounds of more than three independent members are met with, and those in which three occur are care, such as purva-kāma-kftvan fulfilling former wishes.

The two characteristic features of a compound are unity of accent and employment of the uninflected stem in the first member (or members); but there are exceptions to both these rules. Occasionally tmesis of a compound occurs.

¹ Chiefly In dual compounds, as dyava in kadma haves end south; also in a few others, as nard va danceum, for nard-admenia. It takes place only when the compound is doubly accented.

The Sandhi between the members is, moreover, sometimes different from that between words in a sentence.

a. The gender of compounds, if they end in substantives, is with few exceptions that of the last member; the gender of collectives is always neuter. The number in compounds depends on the sense; that in collectives is always singular. When the word appearing as the first member has two stems, the weak stem is used; when it has three, the middle stem (73 a). In substantive compounds the last member retains, as a rule, its gender, form, and inflexion; while in adjectival compounds the gender and inflexion of the last member are of course variable.

b. Classification. Vedic compounds may be divided into three main classes according to their syntactical relations: 1. Co-ordinatives, or those in which the members are co-ordinated: 2. Determinatives, or those in which the first member determines or limits the sense of the hat; 3. Possessives, or adjectives the general meaning of which implies possession (as bahv-anná possessing much food). To these must be added, in order to classify Vedic compounds exhaustively, three lesser groups: 4. Governing compounds, or adjectives in which the first member governs the last in sense (as kṣayād-vīra ruling men); 5. Syntactical compounds, or irregular formations arising from the juxtaposition of two words in a sentence; 6, Iteratives, or repeated words treated as compounds in the Samhitas inasmuch as they have only one accent and a special meaning when thus combined.

1. Co-ordinative (Dyandva) | Compounds.

186. These consist of two substantives, far less commonly adjectives, connected in sense with 'and'.

¹ This term applied to co-ordinatives by the later Hindu gram-marians, means poir or couple.

- A 1. The most numerous group fabout three-fourths of all the Dyandyas) in the Rigyeda comprises those compounds (nearly always names of deities) in which each member is dual in form and has a separate accent : e. g. mitrá-váruna Milra and Varuna; mātárā-pitárā mother and father; dyavāprthivi heaven and earth. In the RV, the two duals are often separated, as in the line a nakta barbib sadatam uşasa let Night and Dawn seat themselves upon the litter. The proper genitive of such compounds is e.g. mitrayor várunayoh. But as these co-ordinate duals early came to be regarded as a unit, the commonest ending of the first member, that of the N. A., came to be retained unaltered in the other cases: G. mitra-várunayoh, I. mitra-várunábhyam. A further step towards unification is taken in a minority of cases in which the first member loses its accent and the last syllable of the final member (irrespectively of its original accent) receives the scute, as surva-candramas-a sun and moon (candrá-mas). The last stage in the Rigveda appears in four examples in which the first member assumes the stemform, e.g. indra-vāyū Indra and Vaya. In the later Samhitas and in B. this is the prevailing type in new formations, e. g. daksa-kratů m. will and understanding (TB.).
- 2. Another type is represented by the plural Dvandvas' which express pairs of groups. These show the stem-form in the first member and the accent on the final syllable of the last. The only examples in the RV, occur in Book X; e.g. aho-rātrāṇi days and nights, ajāvāyas gcats (ajā) and sheep (ávi); but in the later Samhitas this type becomes quite general, e.g. bhadra-pāpāh (AV.), the good and the bad.

¹ Cp. Latin su-sociourilla, a later type representing three groups.

This Deandra shows a double irregularity: the gender of the first number has pervailed ever that of the second, and the f. stem rate! has been changed to rates.

^{*} Several of the cardinal numerals are old Dyandyas, e.g. deadata herire (nee and ten), dea being an old dual; trayo-data thicken (three and ten).

- 3. There occur in the Samhitas a few singular Dyandvas which express a collective sense and are always neuter, and accent the final syllable; e.g. ista-purtum what has been offered or given; kṛta_akṛtām (AV.) what has been done and not done; keša-śmaśru n. hair and beard (AV.); bhadra-pāpām (AV.) good and evū; samiṣṭa-ynjus (VS.) swrifter and sacrificial formula.
- B. Dvandvas consisting of adjectives are rare. They are of three types:
- The adjectives designate colours, their combination expressing a mixture of the two, as nila-lohită dark blue and red = dark red.
- 2. They express a contrast, as utkūla-nikūla (VS.) going uphill and downhill.
- 3. They are used with dual substantives to express that each is an attribute of one unit of the kind, as pad-bhyam daksina-savyabhyam (AV.) with the two feet, the right and the left.
- a. The old dual Dvandvas (A 1) are frequently represented by elliptical duals which put one of a pair in the dual to express both, as dyava = heaven and earth; mitra = Mitra and Varuna; pitara = futher and mother; matara = mother and father, parents.

2. Determinatives.

187. This numerous class of compounds comprises two groups. In the larger group (2 a) the first member has the value of a substantive dependent, in the sense of an oblique case, on the second, which may be either a verbal noun or an ordinary substantive. This may be called the dependent determinative group (named Tatpurasa by the later Hindu grammarians). In the other group (2 b) the final member,

¹ Cf. the Greek randipaper.

[&]quot; Originally doubtless istiparia, dual in both members.

if an ordinary substantive, is described adjectivally, or, if a verbal noun, adverbially, by the first member. This may be called the descriptive determinative group (called Karmadharaya by the later Hindu grammarians).

2 a. Dependent (Tatpurusa) Determinatives.

A. The first member (substantive or pronoun) may have the sense (and often even the form) of any oblique case, When it has an acc., inst., abl., or loc. sense, the final member is mostly a verbal noun; when it has a dat, or gen. sense, it is always an ordinary noun. The compound may be a substantive or an adjective, according as the last member is one or the other.

I. In acc, dependents the final member is always a verbal noun; e.g. havir-ad cating the oblation; go-ghna cow-slaying, asva-haya urging on steeds; deva-madana exhibitating the gods; gara-girna (AV.) having scallowed poison; bhūridavan giving much; bhadra-vadin uttering an auspicious cry; vaja-sati f. act of winning booty; vrtra-hatya n. act of slaying Vitra.

 Inst.: indra-pâtama most drunk by Indra; agnidagdhá burnt with fire; devá-tta given by the gods; aritrapárana, adj. crossing with ours; tanú-subhra shining (with=) in body; bala-vijňayá to be recognized by his strenyth.

¹ The subdivision ending in verbal neurs may be called verbal dependents.

Examples of this sense are very rare. The final member is an ordinary adjective or substantive.

⁵ The final member of genitive dependents is always an ordinary substantive.

^{*} The subdivision ending is ordinary substantives may be called 'nominal dependents'.

⁵ Cf. Greek two-bone-r horse-terming,

^{*} An example of the rure use of a past past part, in a transitive some.

I tte for datte (164, 2 b).

- 3. Dat.; vakmarāja-satya fuithful to the ordainers of hymns; višvā-šambhū sulutary for all.
- 4. Abl.: go-ja produced from cows; tivra-su-t present from the fermenting mass.
- Gen. (the commonest sense): raja-putra king's som;
 viá-páti lord of the clan; deva-kilbişa m. offince against the gods; dru-padá u. past of wood.
- 6. Loc.: hhar-jāta (AV.) born in the day; uda-pluta (AV.) swimming in the water; puru-bha being in many places; bandhu-kṣit dwelling among relatices.
- a. In their first member many dependent compounds retain the case-ending, most commonly the acc., often the loc., but the rest rarely. Sing. endings (acc. and inst.) may express a plur, sense. Plur, endings (acc. and loc.) sometimes occur, but dn. endings never in these compounds.

The acc. generally expresses the object of a transitive verb. The form in am is, in the RV., the rule before the verbal nouns -kara making, -caya collecting, -jaya conquering, -tara overnoming, -dara cleaning, -bhara bearing, -ruja breaking, -sani winning, -saha overwhelming; e.g. abhayam-kara procuring security, dhanam-jaya winning booty, puram-dara, destroying forts, sutam-bhara receiving pressed Soma; it also occurs before other verbal nouns, not infrequently before such as begin with vowels; e.g. dhiyam-dha devout, visvam-inva all-moving, asvam-isti seeking borses. An example of a cognato acc. is subham-ya moving in brilliance, and of an adverbial acc., ugram-pasya (AV.) looking fiercely. Examples of an acc. pl. ending are ka-cit-kara doing all manner of things; pasva-isti desiring kine.

An example of an objective genitive.

I Here the genitive expresses the material.

^{*} The singular acc. form with plural sense.

Above in in positin-bhard brieging progerity and harine-bhard bearing the treamy (built).

This and idvam-int are Tatpurnen possessives (189, 2).

Inst.; girā-vṛdh rejoicing in song; śūnesita driven by dogs! (śūnā); vīdmanāpas working (apās) with wisdom (vīdmānā); kṣudhā-mārā (AV.) m. deuth by hunger; vācā-stona! thief by speech, secretly injuring by words.

Dat.: the only example seems to be found in the loose syntactical compound dasyave vika scali to the Dasya, used as a proper name.

Abl.: divo-ja produced from heaven; divo-rua whining from the sky.

Gen.: very common before pati husband or lord, as gna-spati husband of a divine woman; ja-s-pati lord of a family; brahmanas-pati lord of pramer. It also occurs in the proper names divo-dass servant of heaven and sunah-sepa Dog's-tail.

Loc.; common in the RV. before agent nouns formed from the simple root; e.g. divi-yaj corshipping in housen; rathe-stha standing on a car; also before several formed with a; e.g. divi-kṣayā dwelling in heuren. There are also several examples of plurals, as apsu-ṣād dwelling in the maters; gosu-yūdh fighting in (= for)kine; hṛtsv-ās piercing the heart. The singular also occurs a few times before an ordinary adj. or subst., as māde-raghu quich in exhibaration; svapne-dubsvapnyā (AV.) n. coil dream in sleep.

e. If a root forms the last member of a Taipurnes, final long vowels (5, 1, 0) undergo no change, while short vowels (1, u, r usually add a determinative t; s. g. agre-pd driving deet; rajin-ul bealiss the

¹ Singular unding with plural war-

A rare example of an inst, with an ordinary substantive as final mumber.

^{*} By the false analogy of these words are also formed from a stems res-s-part land of pions suchs and ratha-s-part land of the cor. Dam-part land of the house probably - dam-s-part.

Raifical a. as a shortened form of a, often appears as a final, Defly in the later Sambitas, as agre-a4 good in front, name-disk (AV.) name-plants.

emerifies; raja-in king-creating; but divi-kni-t duriling in house; somean-t Suma-greezing; jyotic-kf-t light-creating. There is, however, no t added in variat-gu forms-ranning.

2 h. Descriptive (Karmadhāraya) Compounds.

188. This class of Determinatives is comparatively rare in the Samhitas. The last member is generally an ordinary substantive, but is sometimes a verbal or an ordinary adjective. The relation of the first member to the last is appositional, attributive, or adverbial. It is expressed in three ways:

1. By a Substantive. If followed by a subst., it has an attributive sense equivalent to an adj. expressing sex or a compound nature; e.g. puruṣa-mṛgā (VS.) m. (man =) male antelope; ùlūka-yātu m. owl demon. i. e. demon in form of an owl; puruṣa-vyāghrā (VS.) m. man-tiger, a kind of demon; vṛṣā-kapi m. man-ape.

If followed by a verbal adj., the preceding subst. is usually appositional in sense; e.g. isana-kft acting as a ruler; stoma-tasta fashioned as a hymn of praise. But sometimes it is adverbial; e.g. rtv-ij sacrificing in seuson = regularly; sarga-takta speeding with a rush.

- a. Before a verbal noun a substantive sametimes implies a comparison; e.g. dhara-vaka sounding like a stream, syena-juta speciful like on angle. Similarly before an ordinary adjective; suka-babhru (VS.) relded like a porret.
- By an Adjective. If followed by an ordinary subst., the adj. has the usual attributive sense; e.g. candrá-mās m. (bright) moon; kṛṣṇṇ-śakuni (AV.) m. raven (lit. black)

¹ Final it sometimes appears as a shortened form of a in some Taipurusas, as dhi-jū inspiring the mind; puru-bhit appearing to many places.

² This is the term applied in this class of compounds by the fater Hindu grammarians.

bird); nava-jvārā m. new pain; mahā-grāmā m. great kost; yāvayat-sakhā m. protecting friend. Sometimes the qualifying adj. indicates a part of what the last member expresses; e. g. adhara-kaṇṭhā (VS.) m. lower (part of the) neck; ardha-devā m. demi-god; pūrvāhṇā m. forenoon; madhyāṃ-dina m. midday.

If followed by a verbal noun, the preceding adj. is adverbial in sense; be. g. & u-patvan swift-flying, i. o. flying swiftly; & u-heman swiftly-speeding; sans-ja born of old (= sana); satya-yaj sacrificing truly (= satyam), dvi-ja (AV.) born twice. Similarly before ordinary adjectives; visva-scandra all-glittering; hari-scandra glittering gellow; try-arusa (AV.) ruddy in three places.

a. At the end of Karmadharayas the final n of an stems is dropped in eka-visit (AV.) m. and bulk, maha-visit (AV.) m. press tool, bha-draha (AV.) n. angleims day.

3. By an Adverb (inclusive of particles and prepositions): aksnays-druh injuring arongly; amutra-bhuya (AV.) a state of being there; evara quite (eva) ready (ara); punar-nava remaining itself; punar-bhu arising again; puro-yavan going before; puró-hita placed in front: sató-mahat equally (sa-tás) great; satyam-ngra truly mighty; sayam-bhaya

As first member of Karmadharayas (and Bahavribis) mahat appears as maha; but the AV. has mahat-kanda gener section,

⁸ Here aškhi friend becomes sakha. Cf. 189, 4d and 189 A. 2u.

² Here shan day is syncopated and extended with a; also in aparahns (AV.) afternoon, ny-thin-a (AV.) decline of day.

^{*} With case-ending retained in the first member.

^{*} The sense is rather appositional in purva-på drinking (sa) first. vämä-jäta bern as one darr, i. e. darr by unlare.

^{*} Cf. Ok. Lieu-wires maint-Haing.

Here the cardinals are used for the numeral adverts dvi-s, tri-s.

^{*} This is much commoner in Bahnvribis (189, 4).

^{*} Also in sad-aha (AV.) in, period of six days [189, 4].

(AV.) m. becoming evening; paśch'-dośń (VS.) m. later part of the evening; idå-vatsará' (AV.) m. the present year; puróagni' (VS.) m. fire in front; su-då giving willingly; duh-kéva unfavourable; a-mitra m. non-friend, enemy; su-vasaná n. fidr garment; áti-kṛṣṇa excessively dark; prá-ṇapát m. great grandson; adhi-rājá m. supreme king; prá-vīra m. great hero; saṃ-vatsará m. full year.

3. Possessive (Bahuvrihi) Compounds:

189. These compounds are secondary adjectives. They are determinatives (generally Karmadhārayas), ending in substantives, which have been transformed into adjectives agreeing in gender, number, and case with another substantive expressed or understood. The transformation is accompanied by a shift of accent from the final member to the first. The term 'possessive' is probably the most appropriate as applied to these compounds, for it expresses their general meaning in the vast majority of cases; in a few instances the more comprehensive sense of 'connected with' is required to indicate the relation between the substantive and the Bahuvrihi compound agreeing with it; e.g. viśvá-nara belonging to all men. Possessives are of two kinds:

1. Karmadhāraya Possessives, in which the first member is an attributive adj. (including participles), an appositional subst., or an adverb (including particles and prepositions): e. g. ugrā-bāhu powerfid-armed; hatā-mātr whose mother has been slain; rūšad-vatsa having a shining calf; ākva-parņa horse-winged, i. e. tehese wings are horses; indra-šatru having Indra as a foe; rājā-putra having kings as sons; hīraṇya-nemi whose fellies are (made of) gald; aṣṭā-pad² cight-footed, dvi-pād² two-footed; itthā-dhī having such thought, devout; puro-rathā whose car is in front; vi-grīva ary-necked;

Here the adverbs preceding ordinary substantives are adjectives

^{*} Uk, arra-rol. * Lat, hi-pel.

an-udrá waterless; a-pád footless; kú-yava causing a had harvest; dus-pád ill-footed; su-parná beautiful-winged.

- a. In some possessives based on appositional Karmadhārayas a comparison of the first with the final member is implied; e. g. varṣdiya (AV.) come rais is (like) butter; vṛkṣā-koās where tree are (like) hore, tree-halved = uccoded (mountain).
- b. The superlatives jyôgtha chief and śréstha best, the comparative bhūyas move, and pāra higher, are used substantively as final member of possessives: indra-jyestha having Indra as chief, yamā-ārestha (AV.) of school Tama as best, fishhi-bhūyāina (AV.) having hore as its chief part = thiefly hore, avara-a-pará*(VS.) in which the lower is higher, topuy-tures.
- 2. In Tatpurusa Possessives the first member most commonly has a gen., not infrequently a loc., but rarely an inst. or acc. sense. The case-ending is in several instances retained. Examples are: rāyās-kāma having a desire for wealth; divi-yoni having (his) origin in heaven; bhāsā-ketu recognizable by light; tvām-kāma having a desire for thee.
- a. In possessives based on gen. Tatpurusas, the first member often implies a comparison, but nover with a case-ending; as agni-tojas (AV.) having the brightness of gree, gre-bright; fixe-griva dear-market; go-vapus com-shaped; mano-java having the sufficess of thought, suffice thought; maybra-roman having the planes of passeds.
- b. When a loc. sense is intended, parts of the body appear as the last member; e.g. siru-mukhā (AV.) having town on her face, teac-fored; ghriā-prytha having lattic on his back, bitter-backed; phtra-hasta (AV.) having a tessel in his hand; mani-grīvā having quark on the nick; mādhu-jihva having heney on his tengue; vājra-bāhu having a bolt on his arm.
- 3. Bahuvrthis come to be used substantively, when the noun with which they agree is dropped; thus su-parná fair-winged, m. bird. Of this use there are three applications:
- a. These compounds very frequently appear as m., sometimes as f., proper names, the adjectival sense often not

¹ Gk, drendport.

² Here the s of the nom, survives from the use of the two words in syntactical juxtaposition. Op. the later para-s-pars and anyo-'nya.

occurring at all. Thus byhad-uktha adj. having great praise, m. a seer; byhad-diva adj. dwelling in high heaven, m. a seer, f. byhad-diva a goddess; m. as names only, Priya-medha (to whom sacrifice is dear) and Vama-deva (to whom the gods are dear).

b. They appear not infrequently as n. substantives with an abstract (sometimes a collective) sense, especially when the first member is the privative particle a- or an-, or the adjective sarva ull; e.g. an-apatya, adj. childless (AV.), n. childlessness; sarva-vedasa (AV.) n. whole property: ni-kilbişa n. deliverance from sin: matr-bandhü (AV.) n. muternal kinship.

c. With numerals, from dvi two upwards, as their first member, they form sing, neuters' (always ending in accented a) with a collective sense; e.g. tri-yuga n. period of three lives; dvi-rājā (AV.) n. battle of two kings; dašāngulā n. length of ten fingers (4 d).

4. The final member of Bahuvrihis is liable to various changes tending to make it end in a.

n. The n of several words in an, kirman, dhaman, naman, parvan, vṛṣan, sakthān, in frequently dropped in ordinary Bahnvrihis, and that of ahan in numeral collectives; e.g. visvā-karma verfarming all work, priyā-dhāma accepying desirable places, chando-nāmā (VS.) access such parvad jajeties, dvi-vṛṣā (VS.) karing has balls, lomani-saktha (VS.) karing hairs days.

b. The suffixes a and ye are frequently added, and sematimes ka; v.g. catur-aks-á feur-ayel, su-gáv-a haring fine core, anyódar-ya bene feun mather semb (ustara), dááa-más-ya ten monthe sid, mádha-hast-ya hence handed, try-amba-ka haring three mathers, vi-manya-ka (AV.) free from anger, a-karná-ka (TS.) sudesa.

e. The suffix in (puncsing) is sometimes pleenastically added; maha-hast-in having large hands, ku-nakh-in (AV.) having bod mails,

Except these formed with ahá day, which are m., as ead-ahá m. series of six days.

But this word retains its n in seven compounds in the RV.

¹ Rot also viává-karman.

^{*} But a-parván anil vřia-parvan,

yado-bhag-in (VS.) risk in place, an-rath-in (VS.) riding in the same chariot.

of, a is substituted for i in kavā-sakhā having a niggard for a friend, and in daškāgulā n. in gith of tes fugers (aŭgūli). On the other hand, i is substituted for a in some compounds of gandhā smell, and in a few others: dhūmā-gandhi smelling of smeke, kratā-rādhi (AV.) attaining success rādha) is agriculture, prāty-ardhi to whom the half (ārdha) belongs.

s. In the f. of Bahavrihis path seasons or look, instead of remaining unchanged, takes the f. form of the subst. (pathi wife) in dasa-pathi karing a demon or marky, deva-pathi karing a decome a husband, vera-pathi subit by a mighty one, after-pathi baring a decome a bushand.

4. Governing Compounds.

- 189 A. In this class, which embraces a considerable number of compounds, the first member, being either a preposition or a verbal noun, governs the last in sense. They resemble Bahuvrthis in form as well as in their adjectival character.
- In the prepositional group, in which about twenty examples occur in the RV., the first member is a preposition capable of governing a case; e.g. ati-ratra's lasting overnight; anu-kama according to wish; a-pathi and a-pathi being on the way; paro-matra going beyond measure, excessive.
- n. Like Bahuvrihia, compounds of this type may become substantives; e.g. upanas-4 adj. being on a rouges, p. (AV.) space on a rouges.
- b. The final number, when it does not end in a, adds the suffix a, and ya sometimes even when it already onds in a : e.g. Ann-path-a point stong the rate, adhas-pad-a being make the feet, paro-ky-a (AV.) may from the cyc (aks), purp-gav-a m. hader young before the coses;

Otherwise sakhi remoins unchanged in both Baltuvribis and Karmadhärayas (but 188, 2) in the RV.; ep. 189, 2c.

* Hern ratri night becomes ratra, as In the Dvandva abo-ratra n. day and night.

^{*} But the meaning is entirely different; for in the prepositional class the first member has the sense of a prep. (not an adj.), and in the verbal class, it has a tramitive (not an intransitive) sense. In the latter class the final syllable of a part, is always accounted (but in Bahuvrihis only when that is the natural accent).

difficent the eller (partin), tipa-mia-ya (AV) occurring every month (mass), tiró-ahn-ya (bring beyont a day), telanging in the day (ahan) before pentaday.

2. In the verbally governing class the first member is an agent noun or an action noun governing the last member as an object. With a single exception they never add a suffix. Three types (in all of which examples of proper names occur) may be distinguished.

a. In the commonest type, which is almost restricted to the RV., the first member is a participle ending in at formed from transitive present stems in a, a, or aya; e.g. rdhad-vara i mercessia goods, tarad-dresses corressing (tarat) for, dharayat-kavi supporting the most mandayat-sakha i gladdening his friend. The following are used as proper names: rdhad-cay i (increasing wealth), jamad-agni i (going to Agai), bharad-vāja (correlay of the price).

it. Only three or four examples occur of a second type, in which the first member consists of a simple present atom (probably toprosenting an imperative); rada-vasus discussing socials, sikus-nar-4* helping men;

as the name of a man : trass-dasyn (levily the fie).

s. Some half dozen examples occur in the RV, of a third type, in which the first member is an action-noun in ti: chit-vara pring termores, with-radhas enjoying the obtained, wreth-dyaw couning the sky to rule; as the name of a man; pústi-gu m. (ranneg keet).

5. Syntactical Compounds.

189 B. A certain number of irregular compounds are formed in a manner differing from that of any of the four classes described above. They may be treated as a class, since all of them have been produced by the same cause: frequent syntactical juxtaposition in a sentence.

¹ fikal-nur-a; see below, note a.

rihat nor. part, of rih surveys,

^{*} sakhi friend landing akka in two other governing compounddravayat-sakha spealing his friend and arayayat-sakha sashing his briend friends. Cf. 188, 2, note 2.

^{*} jamat is a palatalized form of an aor, part of cam :=

^{*} In this and the following example the a of rada and sikan is metrically lengthened.

[&]quot; Here the stem of the final member is extended with a

- a. The relative adverb yad (a nominally formed abl.) in so far as has come to be compounded with a superlative in the adj. yac-chresthá the best possible (lit. in so far as best), and with a gerundive in the adv. yad-radhyam as quickly us possible (lit. in so far as attainable).
- b. The initial words of a text begin to be compounded in the later Samhitās as a substantive to designate that text. Thus ye-yajāmahá (VS.) m., used in the N. pl., means the text beginning with the words yé yájāmahe.
- c. Several subst. or adj. compounds have resulted from phrases consisting of two words in juxtaposition. Thus aham-uttará (AV.) n. dispute for precedence (from ahám uttarah I am higher); mama-satyá n. dispute as to menership (from máma satyám it is certainly mine); mām-paśyá (AV.) designation of an aphrodisiae plant (from mám paśya look at me); kuvit-sa some one (from kuvit sa is it he?); àham-sana (voc.) rapacious (from ahám sanā I will obtain); aham-pūrvá eager to be first (from ahám pūrváh I should be first); kim-tvá (VS.) usking garralously (from kim tvám what are you doing?).

6. Iterative Compounds.

189 C. Substantives, adjectives, pronouns, numerals, adverbs, and prepositions are often repeated. They are then treated as compounds, the second member losing its accent and the two words being written in the Pada text with the Avagraha between them, as in other compounds. This class resembles other compounds in having a single accent, but differs from them in having not the stem but the fully inflected form of nominal words in the first member. In the RV, the iteratives number over 140, rather more than half of them being substantives. The sense conveyed by the repetition is frequency, or constant succession in time, or distribution in space. Examples of the various kinds of iteratives are the following:

- a. Substantives: áhar-ahar, divé-dive, dyávi-dyavi every day, műsí-műsí month after month: grhé-grhe, dámedame, visé-vise in every house; ángād-angāt from every limb; disé-disah (AV.) from every quarter; yajflásya-yajflasya of every sacrifice; párvani-parvani in every joint; agnim-agnim (duvasyata), (worship) Agni again and again; ánnam-annam (AV.) food in perpetaily.
- h. Adjectives: pányam-panyam. . . sómam Soma who is aguin und aguin to be praised; prácim-pracim pradisam each eastern direction; uttaram-uttaram sámam (AV.) each following year.
- e. Pronouns; tvám-tvam aharyatháh thou didst ever rejoice; yád-yad yámi whalever I usk; tát-tad . . dadho ho alungs bestows that.
- d. Numerals: pañca-pañca five each time; sapta-sapta (tredha three times) seven in each case (= 21).*
- e. Adverbs: vátha-yatha as in rach case; advadya sváh-svah on each to-day, on each to-morrow,
- f. Prepositions: the four which are found used thus are upa, para, pra, sam; e.g. pra-pra. . sasyate it is ever proclaimed.
- g. The only example of a verbal form occurring as an iterative is piba-piba drink, drink. Otherwise a repeated verb is treated independently; e.g. stuhi stuhi praise, praise.

I shar-divi day after day, is a kind of mixed therative,

² For divi-divi and visi-visi, owing to the influence of the frequent lies, in a from a stems.

for the SR, such words are repeated with var yavad va yavad va and yatame va yatame va.

^{*} Such iteratives led to the formation of regular compounds in B.: 6ka-ekah (AV.): 6kaikah (SB.); dvå-dvå (RV.); dvan-dvám (MS.) in tees, dvan-dvá zeie (B.).

In a few instances repeated adverbs are not treated as compounde, both words being acconted: no no now, now; then (AV.) here, here, but always then in RV.

^{*} In the SB. also occurs yajasva-yajasva.

CHAPTER VII

OUTLINES OF SYNTAX

190. Having in the preceding parts of the present grammar dealt with single words in their phonetic, their derivative, and their inflexional aspects, we now turn to their treatment in syntax, which regards their arrangement and mutual meaning when they are combined to form a sentence, which is the expression of a connected and definite unit of thought. The parts of which the sentence may consist are either inflected words: the noun (substantive and adjective) and the verb, the participle which shares the nature of both, and the pronoun; or uninflected words: prepositions, adverbs, and conjunctions. A comparison of the syntax of the RV, with that of classical Sanskrit shows (1) that the use of the middle voice, the tenses, the moods. the inflected participles, the infinitives, and the genuine prepositions is much fuller and more living in the former, while (2) that of the passive voice and of indeclinable participles is much less developed, that of absolute cases and of adverbial prepositions with case-endings is only incipient, and that of periphrastic verbal forms is non-existent. The later Samhitas and the Brahmanas exhibit a gradual transition by restriction or loss in the former group and by growth in the latter to the condition of things prevailing in classical Sanskrit.

The Order of Words.

191. Since metrical considerations largely interfere with the ordinary position of words in the Samhitas, the normal order is best represented by the prose of the Brahmans, and as it there appears is, moreover, doubtless the original one.

The general rule is that the subject begins the sentence and the verb ends it, the remaining members coming between.

a. The subject begins the sentence; e. g. viśah ksatriyaya balim haranti the peasants pay tribute to the prince (SB.). It may, however, be preceded by a particle like uta or occasionally by any other member of the sentence intended to be strongly emphasized; e.g. prayājāir vāi devāh svargām lokām āyan by means of the Prayājas the gods went to the heavenly world (SB.)

b. The varb occasionally moves to the beginning of the sentence when it is strongly emphasized; e.g. yanti va apa, ety aditya, eti candrama, yanti naksatrani the caters move, the sun moves, the moon maces, the stars move (SB.). A predicative noun with the copula (which may be omitted) being equivalent to a verb, naturally occupies the same position; e.g. sarve ha val deva agre sadésa asuh all the gods in the beginning were similar (SB.): mitro vai sivo devanam Mitra, indeed, is the kindly one among the gods (TS.). Nevertheless the predicative noun, being emphatic, is as a rule the first word in the sentence; e.g. martya ha va agre deva asuh the gods were originally mortals (SB.); puruso vai yajhah the sacrihee (is) a man (SB.).

c. As regards the cases, the acc. is placed immediately before the verb; e.g. chándāmsi yuktāni devébhyo yajñām vahanti the metres, when they are yoked, take the sacrifice to the gods (SB.). Adverbs and indeclinable participles occupy a similar position. Occasionally such words move to the beginning; e.g. divi vai soma āsīd, ātha thá deváh in heaven was Soma, but here the gods (SB.).

d. The apposition, including patronymics and participles, follows the word which it explains or defines; e.g. somo rājā Soma, the King. A participle, in its proper sense, if

emphatic may be placed at the beginning; e.g. svapantam vai diksitam raksamsi jighamsanti it is when he sleeps that the Raksases seek to slay the initiated man (TS.).

c. The attribute, whether adjective or genitive, precedes its substantive; e.g. hiranyayena rathena with golden car (i. 35°); devanam hota the priest of the gods. Only when adjectives are used in apposition, especially as epithets of the gods, do they follow; e.g. mitraya satyaya to Mitra, the true (TS.). Also adjectives designating the colours of certain animals, especially horses and cows, are found after the subst. The subst. belonging to a gen. is placed before the latter only when it is emphatic.

f. The preposition belonging to a verb precedes it, always in B., generally in V., where, however, it also sometimes follows; e.g. jáyema sám yudhi spřdhah see would conquer our foes in battle (i. 8°). The preposition as a rule immediately precedes the verb, but is often also separated from it by one or more words; e.g. å sáyakam maghává adatta the Bounteous One scized his missile (i. 32"); ápa támah pāpmānam hate she drives away darkness und sin (TS.). When a compound verb is emphatic, the preposition alone as a rule moves to the front occupying the position that the simple verb would occupy; e.g. prá prajáyā jāyeya I would increase with progeny (TS.).

When used with substantives the genuine prepositions as a rule follow their case, while the prepositional adverbs precede it. The reason of this doubtless is that the former supplement the sense of the case, while the latter modify the sense much more emphatically.

y. Multiplicative adverbs precede their genitive; e.g. trih samvatsarásya three times a year.

h. Enclitics cannot, of course, begin a sentence. If they belong to a particular word they follow it; otherwise they tend to occupy the second position in the sentence. The enclitic particles that follow the word with which they are

most closely connected are ca, va, iva, cid; kam is restricted to following nú, sú, hi in V., and sma to following ha in B. The other unaccented particles, u, gha, ha, svid, which refer to the statement of the whole sentence, occupy the second (or third) position in the sentence.

i. Even accented particles for the most part cannot begin a sentence. They either follow the word they emphasize in any position in the sentence: â, evâ, kâm; or they occupy the second position in the sentence, as emphasizing the whole statement: angá, áha, íd, kila, khálu, tú, nů, vái, hí.

The only particles that can begin the sentence are athu, api, uta; also no if it negatives the whole sentence, but if it negatives the verb only, it follows that

j. Forms of the pronoun tá tend in B. to occupy the first position, especially sá when it anticipates a proper name in dialogues, or tád as an acc. when famous authorities are quoted; e.g. sá hováca gargyah (SB.) Gargua spoke (as follows); tád u hováca asurih with regard to this Asuri suid (SB.). The order is similar when átha or ápi are used; ápi hováca yajňavalkyah (SB.).

k. In relative and interrogative sentences there is nothing peculiar except that, as these two classes of words tend to begin the sentence, cases of them come to occupy the first position which in ordinary sentences do not occupy it; e.g. kim hi sá táir grháih kuryát schat indeed should he do with this bases I (SB.).

a. The last position in the sentence is exceptionally occupied in the following ways: 1. very often by final datives as a supplement to the sentence; e.g. the position evaluation part dadatt groups thus as house the sentence in him for presention (SB.); 2. by the subject either when it is the name of an authority quoted or when it is equivalent to a relative clause; e.g. so has a uniform partial except positionally and (who is desirous of cattle should assign a pay for Indea (TS.).

192. There is neither an indefinite nor a definite article in the Vedic language. Their meaning is inherent in the substantive much as personal pronouns are in forms of the definite verb. Whether the one or the other is meant is made sufficiently clear by the context; e.g. agnim ite purchitam I praise Agni the domestic priest (i. 11); agnim manye pitaram Agni I deem a father (x. 71). In B, the anaphoric use of the is sometimes very nearly equivalent to the definite article (cp. 195 B 3 b, p. 294).

Number.

- 193. I. Singular words with a plural or a collective sense are always treated strictly as singulars, being never construed with a plural form of the verb (cp. 194).
- 2. The dual number is in regular use and, generally speaking, in strict application. But in certain parts of the RV, the plural is often used instead of the dual of natural pairs; sometimes also otherwise; e.g. sam anjantu visve devah, sam apo hédayani nau let all the gods, let the waters unite the hearts of us two (x. 85⁴⁷).
- a. A m. or f. du. is sometimes used to express a male and female of the same class; e.g. pitárā = father and mother; mātārā = mother and father. This type of the dual has its widest application in naming pairs of deities by means of one of them and is equivalent to dual compounds containing both names; e.g. dyāvā heaven and earth (= dyāvā-pṛthivi); uṣāsā Dawa and Night (= uṣāsā-nūktā); mitrā Mitra and Varuņa (= mitrā-vāruṇā). Sometimes the other member of the pair is added in the N. sing.; e.g. mitrā tānā nā rathyā vāruṇo yāś ca sukrātuḥ Mitra (and Varuṇa) und the very wise Varuṇa, like two constant charioteers (viii. 25°).
- 3. a. The plural is sometimes used (analogously to the dual) so as to include the other two of a group of three; e.g. dyavah the (three) heavens = heaven, air, and earth;

prthivih the (three) carths = carth, air, and heaven.' This inclusive plural is also found with the names of the two other members of the group added in the N. sing.; thus abhi samrājo váruņo grņanty, abhi mitrāso aryamā sajósāh to it the universal sovereigns Varuņa, to it the Mitras (= Mitra, Varuņa, Aryaman), and Aryaman, accordant, sing (vii, 38).

b. The 1. pers. pl. is sometimes loosely used instead of the sing, or du.; thus Yama in his dialogue with Yami says ná vát purá cakrmá kád dha nünám rtá vádanto ánrtam capema how gray can we, what we have never done before, speaking of righteous things now talk of what is unrighteous t (x. 10°). The plur, of personal pronouns is also occasionally used in a similar way; thus in the dialogue of Yama and Yamı (x. 10) nas alternates with the correct nau : sa no nabhib, paramam jami tan nau that is our bond of union. that our highest kinship. This occasional looseness is probably due to the situation for the moment being regarded more generally so as to include others ; we would then mean I and those present, we two and others in like circumstances. In B. the use of the pl. for the sing, of the first pers, of the personal pronoun is not infrequent both when the pronoun is expressed and when it is latent in the verb; e.g. sa ha. uváca: námo vayám bráhmisthűya kurmab he repliel: we (= I) show reverence to the most learned man (SB.); váram bhávate gautamáya dadmah we (= I. Jaivali) offer u boon to his Honour Gautama (SB.).

Concord.

194. The rules of concord in case, person, gender, and number are in general the same as in other inflexional languages.

^{&#}x27; To this use is probably one the conception of the three heavens and three earths in Vedic cosmology.

- A. 1. To the rule that the verb agrees with its substantive in person and number the exceptions are very rare. Thus the sing, of the word tva many, having a pl. sense, appears once with a pl. verb: jáyan u tvo juhvati many a one sacrifices for victories (MS.). On the other hand, there are a few examples in the RV, of a neut. pl. taking a verb in the sing.; e.g. dhṛṣṇāve dhīyate dhānā to the bold man booty accrues (i. 81°).
- 2. a. When two sing, subjects have one verb, the latter in most cases is in the dual; e.g. indras ca yad yuyudhate ahis ca when Indra and the dragon fought (i. 3213); ūrjam no dyaus ca prthivi ca pinvatām may heaven and earth increase our strength (vi. 70°); indras ca somam pibatam brhaspate do ye two, Indra and (thou), O Brhaspati, drink Soma (iv. 5010).

When one only of two subjects is expressed, the other having to be supplied, the verb is also in the dual; e.g. a yad indras ca dadvahe when (I) and Indra receive (viii. 3410); bihaspate yuvam indras ca vasvo divyasya isathe O Brhaspati, ye two, (thou) and Indra, dispose of heavenly wealth (vii. 9710). In B. this usage seems to be found only when the verb is in the third person; e.g. prajapatih praja asrjata: ta bihaspatis ca anvavaitam Prajapati created beings: (he) and Brhaspati followed them (TS.).

a. In a minority of example two sing, subjects take a sing, verb when they are equivalent in sense to a du, compound; e.g. tokám ca tásya tánayam ca vardhate his affaning and family proque (ii, 25°).

- B. In B. when two sing, subjects are connected by an the verb is in the du; but if a contrast is intended, in the sing,; e.g. taxya dhata on aryuma on always from her Dhate and Asyuman new been (MS.); but prihivya vai meddhyam on amedhyam on syild alramat from the earth there is used on the one hand the pure and on the other the impure (MS.).
- b. When there are more than two subjects the verb is not necessarily in the pl., but may agree with only one of them.
 - 1. If each of the subjects is sing, the verb is sing.; e.g.

mitrás tán no váruno ródasi os dyubhaktam indro aryamā dadātu let Mitra, Varuna, Rodasi, Indra and Aryaman gire us this divine wealth (vii. 402).

2. If the subjects are of different numbers the verb may agree with either one or the other; e.g. avad indram yamana tftsavas ca Yamana and the Trisus helped Indea (vii. 1810); indro vidur ángirasas ca Indra and the Angiroses know it (x. 10810).

The du, and pl. take the du, or the pl.; e.g. giráyas ca drlhá dyávā ca bhúmā tujete the firm mountains and heaven and earth trembled (i. 6114); dyávā ca yátra pīpāyann áhā ca where heaven and earth and the days have given abundance (vii 652).

a. In B, a sing and a du, subject take a verb in the sing; or pl.; v. g. vyāmamātrām paksām ca phoham ca bhavati bili the viene and the tell are a fathem in length (TS.); tāv akvinam ca sārasvatī ca, apām phanām vājram axinoan the divice and Sarameni moulded the foam of the maters into a ball (SB.); a sing, and a pl. take the verb in the pl.; e. g. devās ca vāi yamāš ca, gamin lokē 'spardhanta the pode and Funn jonghi for (the possession of) that world (TS.).

A. In B. anyō 'nyā me another takes this varb in the sing, du, or pl. according as one, two, or several agents are intended; e.g. tabhyah sā n'r rehād yō nah prathamō 'nyō 'nyāsmai drūhyāt of these he shall be deprived who first of an may cheel another [TS.); ned anyō 'nyām bināsātah bes they injure out other (SB.); tāni aratāny anyō 'nyām.

aspardhants being created they fought with an unother (SB.).

3. When two or more subjects of different persons take a verb in the du. or pl. the first person is preferred to the second or third, the second to the third; e.g. ahám ca tvám ca sám yujyāvs I and thou will unite together (viii. 6211); tám yûyām vayám ca asyáma muy yan and see obtain him (ix. 9812). Occasionally, however, the third person is preferred to the first; e.g. amí ca yé maghávāno vayám ca míham ná súro áti nís tatanyuh may these patrons and see pierce through as the sun the mist (i. 14113).

B. 1. An attributive adjective agrees with its substantive in gender, number, and case. The exceptions are few

and unimportant, being chiefly due to the exigencies of metre.

s. The cardinals from the to number, being adjectives, show some poculiarities of concord: in the oblique cases they appear in V. not only in their inflected form, but often also the uninflected forms of the nome, and see, ; e.g. saptabhili putrails and capta hotrohili, paneau janeau and panea krytisu. In B. only the inflected forms are used.

b. The sardinals from 20 upwards being substantives in form may govern a G. ; e. g. sastim ásvánám sizy koras, satám gónám s kusdrad king, sahasrani gavam thousands of king. They are, however, generally treated like adjectives; but being collectives they take sing, endings in concord with pit cases; o. g. trimead devan thirty gods, trimeatam vojanani thirty pojamas (acc.), trimaata haribbih with thirty hops, travastrimsato davanam of thirty sois (AB,), satam hundred and sahaaram thousand are used as the nom, acc. form in agreement with plurals; a g. father purch a hundred forts, subfaram harayah a thousand beau, sahasram pasun a thousand bearls (TS.); they also appear in the same some in the niural; s.g. said purch a hundred forth, sabdaring ddhirathani a thousand mapon louds (x. 95°). Satam and sahasram are also found (but not in B.) with an inst. pl., as satism purbhin with a hundred forts beside satern haribhih with a hundred buys, sahdaram faibhih with a thousand seers. The noun accompanying subfara occasionally appears by a kind of attraction in the sing : some cic obspan niditam saharrad yupad umuñoah thou didit delleer Sunnhern, icho mes housed; from a thousand posts (v. 27); this use does not seem to occur in B.

 A predicative adjective used with as or bhū (often to be supplied) agrees in gender and number with its subject.

a. The nome of Livara expectly used thus in B. is equivalent to a verb = be able. The concord here is in the majority of cases normal; e.g. Livaro va asyo 'yato' 'pratisthitah param parawatan gantoh a horm (f untridied and uncharacted can be to an extreme distance (TS.); expenses tivara practable also can here him (TS.); livarate va etten nirdahah both of them can here (SB.); they can isvarate pratimitah they can drive him among (MS.). Sometimes, however, the concord of either number or gender, or of both, is neglected; e.g. the itvarate prajapiyasi hantoh the demons can bill him (TS.); they a tivarate prajapiyasi bhavitoh his effecting can dependent (SB.); isvaro ha eta anagnicitam sumtaptoh these (f. pl.) are thable to weigh heavily upon one toke has not built a fee after (SB.). In the last two examples quoted

and in others the mase, sing, has become stereotyped as a nom, of all genders and numbers,

& The use of a predicative adjective referring to two or more substantives differing in gender is very rare; it then seems to agree in gender with the subst. nearest it, or the mase, seems to have been preferred to the neat.; c. g. trays vii nairrid aksah striyah svapnah (MS.) dies, scomes, and sleep (are) the trible pernicious (things); eva by anya kamya stoma uktham on samnya thus undeat his two prometies, stoma and aktha, are to be recited (1, 810). A predicative adj. dependent on ky agrees with its subst.; if there are two, the du. is used; e.g. daiving an vava asma etad viang manualm on anuvarranana karous se he under the drive and the kuman felk shetient to him MS.

8. As in Greek and Latin, a demonstrative pronoun agrees with a predicative noun in gender and number; e.g. ye tuşāh sā tvak what (are) the husks (that =) those (are) the skin (AB.); yad asru saṃkṣāritam asīt tanī vayāṃsī abhavan what was the concentrated lear (those =) that became the birds (SB.).

Pronouns.

- 195. A. Personal. a. Owing to its highly inflexional character the Vedic language, like Latin and Greek, uses the nominatives of personal pronouns far less frequently than modern European languages do. Being already inherent in the first and second persons of the finite verb such pronouns are expressed separately only when they require emphasizing.
- b. The unaccented forms of aham and tvám (109 a) being enclitic, can be used neither at the beginning of a sentence or metrical line (Pada), nor after vocatives, nor before emphasizing, conjunctive or disjunctive particles.
- c. Bhavan Your Honour, the polite form of tvám, which first comes into use in B., properly takes a verb in the 3. sing. But being practically equivalent to a personal pronoun of the 2. pers., it occasionally appears with a verb in that person; e.g. iti våvå kila no bhåvän purå

anusistan avocah (SB.) in this sense then you have formerly spoken of (us =) me us instructed (ap. 194, 1).

- B. Demonstrative. 1. ayam this (here) is a deletic pronoun used adjectivally of what is in the neighbourhood, presence, or possession of the speaker, and may often be translated by here; e.g. ayam ta emi tanva purastat here I come with my body before thee (viii. 1001); iyam matir mama this my hymn; ayam vatah the wind here (on earth); ayam janah the people here (vii. 553); idam bhuvanam this world; ayam agnih Ayni here (present). In the RV. ayam is sometimes used even with div heaven and aditya sun as if they were included in the environment of the speaker.
- 2. Opposed to ayam is asau that (there), applied to objects remote from the speaker, as heaven and its phenomena, immortals, persons who are not present or are at a distance; e. g. ami yé devà sthána trişú, à rocané diváh ye, O gods, who are there, in the three bright realms of heaven (i. 1054); ami ca yê maghávāno vayám ca those (absent) putrons and see (i. 14113); asáu yá éşi virakáh you who go there, a mannikin (viii. 912).
- a. In B. the usage is similar, only the centrest is more definite to it is typical in referring to the earth (iyam) and the heavenly world (asku), and in the phrases yo 'yam pavate he note bloom here (-Wind), and yo 'sau tapati he who bures there -Sun), and nake addityan the menthers. In B. asau is besides used in a formulate way (-se and so) when the actual name is to be substituted; a.g. asau name, ayam idangrupah he here, having this form, is so and so by mone (SB.). In addressing a person the you form asau is also used thus; yatha vaidan namagraham asa and its heavyatt us one here (-in ordinary life) by may of mentioning the name calls; 'you there, you there' (MS.).
- 3. tá, like asáu, can be translated by that, but in a different sense. It is not like asáu essentially deictic and local, nor does it imply a contrast (that there as opposed to this here); but it refers to something already known either as just mentioned or as generally familiar.
 - a. A very frequent application of this meaning is its

reference as a correlative to what is made known by an antecedent relative clause; e.g. yam yajūam paribhūr asi, sā id devēsu gachati the sacrifice that thou encompassest, that certainly yoes to the gods (i. 1°). Often, however, an antecedent clause is lacking and must be mentally supplied in some such form as whom we have in mind. Then tá is equivalent to the well known. This use comes out most clearly in the first verse of a hymn; e.g. sá pratnátha sáhasā jāyamānah, sadyāh kāvyāni bāļ adhatta višvā (i. 961) he (who is in our thoughts, the famous Agni) being engendered in the uncient way with strength, to! has straightway assumed all wisdom; tā vām višvasya gopā yajase (viīi. 25°) you two famous quardians of the universe I worship.

b, tá has a very frequent anaphoric ase, referring back to a noun or a pronoun of the third or second person (in B. also of the first), and may then be translated by as such, so: e.g. tvám vájasya śrútyasya rájasi: sá no mrla thou rulest over glorious spoil: as such be gracious to us (i. 26"); sā tathā ity abravīt: sā vai vo varam vrņā iti she said, yes: I as such (= in the proposed circumstances) will choose a boon of you (AB.). This usage is a prominent and somewhat monotonous feature of the narrative style in B.; e.g. prajápates tráyastrmásd duhítára ásan, táh sómáya rajne 'dadāt, tasām rohinim upait, tā irşyantih punar agachan Prajapati had thirty daughters; he gave them to King Soma; of them he visited Robint (only); they (the others), being jealous, went back (TS.). When this ta is widely separated from the antecedent noun to which it refers (sometimes only indirectly) it may be translated by the definite article; thus the opening of the story of Urvast; urváší ha apsaráh pururávasam aidám cakame un Apsaras Urvaši loved Puriravas, the son of Ida is some sentences later referred to with: tad dha ta apsarasa stayo bhûtva pari pupluvire then the Apsarases swam about in the form of water birds (SB.).

n. In its anaphoric uso tá is frequently followed by personal pronouns of all persons (regularly in their enclitic form when (boy have one); e.g. tám mã sám srja várcezá mult me as such telh glory (t. 25%), mắm yajhād antár sgáta: sắ vo 'hām evá yajhādu amūmmham ye hare excluded me from the sacrifice; so I have thrown year merifice due confusion (ŚB.); havismanto vidhema te: sã tvám no adyá sumánā thá, avitā bháva bruging oblatioss so multi zere ther: so do them to for ut to day a benesim Lifper (t. 36°); yádi tvá etás púnar brávatah, sắ tvám brútāt (ŚB.) (f they (toe) shall say this so you again, then do put sey (to thism); asyā plivā ghanó vertrāṇām abhavas . . tám tvá vájáyāmah having densé yí this thau becoment a sigur of Vytras; so us strenglim the (t. 4°). Similarly used ano: sáng. A. tấm tvám (here exceptionally not enclitic), b. tásmai to, G. tásya to, tásyās to; du. tá vām; pl. A. tấm vae, G. tésam vas.

S. Four demonstrative prenouns are found following to in this way: idom, adds, to itself, and oftenest of all ctod; e.g. so jyans asmo sanaja pitrya dhift this here is among as an ascient hymn of ear freefallers (iii. 29°); they willo my headly: then among vote dhunoit the full hongs stone: that the wind tesses to and free (SB.); then he even he art dadline: this he sema this pure brahmana he terranti that (river) he (Agni) did not have across: that some one the Brohmana med not formerly to cross (SB.), bhavery anya annearo ya every voda: sa ve sea skatithill, so esa juhvatsu vasati he also keens this has a follower; that the follower is this one guest: this some (follower, the Sun) ability among the sucrificers (AB.).

The N. sing, at is sometimes used adverbally in B. (see 180, p. 249).

 età this is used like tà but is more emphatic. It refers to something known to the listener as present either to his senses or his thoughts.

a. The correlative use of etá seems to be limited to B., the relative clause here usually following; e.g. patho vá ega praiti, yo yajňe muhyati he diverges from the path who goes wrong in the sacrifice (AB.). It is somewhat peculiar when the relative in the neuter sing, and without a verb is added solely for the purpose of emphasizing a particular word; e.g. svargam vá etena lokam upapra yanti yat práyaniyah people go to the heavenly world with that which (is) the preliminary sacrifice (AB.). In these circumstances etá when alone always agrees in gender with the noun in the

relative chanse; but when it is accompanied by a substantive, with the latter; e.g. pasayo và ete yad āpaḥ water is equivalent to cattle (AB.). In this usage yad often loses its inflexional character to such an extent that it becomes like an explanatory particle (= that is to say), the substantive that follows it agreeing in ease with that which precedes; e.g. etsir ātra_ubhāyair ārtho bhavati yad devāis ca brāhmaṇāis ca there is need here of both, that is, of the gods and the Bruhmans (ŚB.).

The use of sta without an antecedent, parallel to that of ta, is common both in V. and B.; e.g. eso usa vy uchati this Dawn (whom we see before us) has shone forth (i. 46'); te ha asura asuyanta iva ucur: yavad evaisa visuur abhiséte tavad vo dadma iti the Asuras said somewhat displeased: as much as this Visuu (here present) covers lying down, so much we give you (SB.); yuvam etam cakrathuh sindhusu plavam ye two have made that bout (present to our thought) in the ocean (i. 182'); tena etam uttaram girim ati dudrava therewith he passed over that (well known) northern mountain (SB.); ta ete maye asrjanta suparnim ca kadrum en they created these two (well-known) miraculous beings, Suparut and Kadra (SB.). In the last example ete requires the addition of the two following names to supplement its sense.

u. Somewhat similarly this pronoun is semetimes followed in B. by words or a sentence explaining it; e.g. ad etablic developing nayde bhotva marcidohir visa, agnina duthens, upapidyata hi, united with these disting, the Marula us the Righting falk and Agni as the house, appropriate (MS.); sa ha etail ova dadarás; anasanatoya val mu prajáh para bhavanti, iti as sum this; in consequence of hunger say treatures are perioding (SR.).

b. In its anaphoric use ctá expresses identity with that to which it refers back, more emphatically than tá does; s. g. ápeta vita vi ca sarpata áto: asmá etám pitáro lokám akran go away, disperse, depart from hence: this place (on which you have been standing) the fathers have prepared for him (x. 14°); in the final verse the expression ead stoma indra tubhyam (i. 173°) this praise is for thee, O Indra, refers to the whole preceding hymn; tad ubhayam sambhftya mfdam ca apas ca isiakam akurvams: tasmad etad ubhayam istaka bhavati mfc ca apas ca having brought both those together, clay and water, they made the brick: therefore a brick consists of both these, clay and water (SB.).

- 5. tyá occurs only in the sense of that (well known); e.g. kvá tyáni nau sakhyá babhúvuh what has become of those friendships of us two? (vii. 88°). It often follows forms of the demonstrative pronouns etá and idám; e.g. eté tyé bhānāva uṣāsa āguḥ here those (familiar) beams of Dawn have come (vii. 75°); imám u tyám atharvavád agním manthanti they, like Atharvan, rub forth that (famous) Agní here (vi. 15°). The neuter tyád is sometimes used after the relative yá, and often after the particle ha, in an adverbial sense; e.g. yásya tyác chámbaram máde divodásāya randháyah in the exhibaration of which (Soma) thou dulst at that time subject Śambara to Divodása (vi. 43°).
- 6. The pronoun a that in its substantive sense (= he. she. it, they), when it is unaccented, not infrequently appears as an unemphatic correlative (while the accented form is a deletic adjective); e.g. yasya devair asado barhir agne, ahani asmai sudina bhavanti on whose litter thou, O Agni, hast sut down, fair days arise for him (vii. 112); ya vam satam niyutah sacante, abhir yatam arvak the humbred teams that accompany you, with them do ye too come hither (vii. 91°); nakir eşam nindita martyesu, ye asmakam pitaro goşu yodhah there is among mortuls no reproacher of them scho, (being) our fathers, were fighters for cows (iii. 39°).

THE CASES.

Nominative-

- 196. The nominative, as in other languages, is mainly used as the subject of a sentence.
- a. A second nominative is employed as a predicate with certain verbs beside the subject, that is, with verbs meaning be, become, seem or be accounted, think oneself; e. g. tvám hi ratnadhá ásí for thou art a bestouer of treasure (i. 153); álvásah sánto ásívá abhúvan being friendly they have become unfriendly (v. 125); ékavimásatih sám padyante they become twenty-one (TS.); gókámá me achadayan they seemed to me desirous of cours (x. 10810); fsih kó vipra ohate who counts as a seer, as a singer? (viii; 311); apratir mányamanah thinking himself irresistible (v. 3231); sóman manyato papiván he believes he has drunk Soma (x. 855); parábhavisyánto manāmaha we think we are about to perish (TS.).
- a. In B. the predientive num, also appears with verbs meaning to call enemy (bru, van, vad in the middle); e.g. indro brahmano bruvanal laste calling himself a Bulhman (TB.); hantavocathan than alter described theself or a slaper (TB.).

6. With verbs of naming the predicative acc. may also be expressed in B, by the nom. with iti; e. 2. rambha iti hy ètam reayo *vadan

for the years called him 'ane' TS.J.

h. With passive verbs the predicative nom. takes the place of the acc. object of the active verb; e.g. tvám... ucyase pitá thou art called a father (i. 811).

c. Instead of the predicative nom, the voc. is sometimes used; e.g. yūyām hi sthā, audānavah for ye are liberal (i. 153); ábhūr éko, rayipate rayīnām thou alone hust been

In B; the phrase rupum kg to assume a form, because it is equivatent to bhit tooms, takes a predicative from ; e.g. visua rupum kgtvd assuming the form of Pipes (PS.).

the lord of riches (vi. 31'); gáutama bruvaņa thou scho callest thyself Gautama (SB.). (Cp. 180 under ná, 2 s.)

a. Since apparently two vocatives cannot be connected with ca, the nome often appears instead of the first or the second vocative; e.g. vayav indras on cetathah. O Vaya and Indea, ye know (i. 2⁵); indras on soman pibatam brhaspate Indrasond Behaspati, drash the Sama (iv. 50¹⁰). Cp. 180 under ca, I a. 5.

Accusative.

- 197. A. This case is usually employed in connexion with verbs in various ways. Besides its ordinary use of denoting the object of transitive verbs, the acc. is employed to express:
- 1. the goal with verbs of motion, chiefly gam, also i, much less often yā, car, and sr and some others. The accumay be a person, a place, an activity or a condition; e.g. yamām ha yajño gachati to Yama goes the sacrifice (x. 14¹³); devām id eşi pathibhih sugebhih to the gods thou goest by paths easy to traverse (i. 162²¹); indram stomāš caranti to Indra fare the songs of praise (x. 47¹); sāraj jāro nā yōṣaṇām he sped like a laver to a maiden (ix. 101¹⁴); mā tvāt kṣōtrāṇy āraṇāni ganma may we not go from thee to strange fields (vi. 61¹⁴); sabhām eti kitavāh the gambler goes to the assembly (x. 34⁶); jarītūr gachatho hāvam ye two go to the calt of the singer (viii. 35¹³); tāva krātubhir amṛtatvām āyan by thy mental powers they (went to =) altained immortality (vi. 7¹).
- a. The mage in B. is similar; e.g. prajapatip praja serjata, tā vārupam agachan Propipati created creaters; they need to Varupa (TS.); so no diyam apatat he did not fly to heaven (SB.); sriyam gachayam may I yo to =) attam property (SB.).
- duration of time (in origin only a special form of the cognite acc.); e.g. satám jiva śarado várdhamánah live prospering a hundred autumns (x. 161*); so aśvatthé samvatsarám atisthat he remained in the Ascattha tree for a year

- (TB.); tásmát sárván rtún varsati therefore it rains during all the seasons (TS.); samvatsaratamim rátrim á gachatát (SB.) for the night a year hence thou shall come (to me).
- 3. extension of distance (in origin only a special form of the cognate acc.), a use rare in both V. and B.; e.g. yad asubhih patusi yojana puru when with the swift ones thou fliest many leagues (ii. 163); sa bhumim visvato vṛtva aty atiṣṭhad dasangulam he covering the earth on all sides extended beyond (it) a distance of ten fingers (x. 901); saptādasa pravyādhān ājim dhāvanti they run a race (a distance of) seventeen arrow-flights (TB.).
- 4. the cognate object of intransitive verbs, which may be allied to the latter etymologically or only in sense; e.g. samānām aājī aājate they deck themselves with like adornment (vii. 57°); yād agne yāsi dūtyām when, O Agni, thou goest on a message (i. 12°); tvāyā ādhyakṣeṇa pṛtanā jayema with thee us witness we would conquer in battles (x. 128°); tāsmād rājā saṃgrāmām jitvā udājām ūd ajate therefore a king, having sum a battle, chooses booly for himself [MS.); tisro rātrīr vratām caret he should perform a fust for three nights (TS.).
- a. Vérba meaning a arrow or to shine in V. take a cognate acc, with a concrete sense; e.g. rtásya jihvá pavate mádhu the tongue of the rite (Soma) strasma ment (ix. 76°), táamá ápo ghrtám arsants for him the maters straum phot (i. 125°), vi yát súryo ná rócate brhád bháb ichen, like the sun, he brome forth logy light (vil. 8°).
- 5. an adverbial sense. Adverbs of this form all originated in various uses of the acc, which have acquired an independent character. They are formed from:
- a. substantives; e.g. naktam by night (not during the night like the use. of time); kamam at will (still rare in the RV.), e.g. kamam tad dhota samsed yad dhotrakah purvedyuh samseyuh the Hotr may, as he likes, recite what the assistants of the Hotr may recite the day before (AB.); nama by name; e.g. mam dhur indram nama devata

(x. 492) me they have placed as Indra by name (or verily) among

the gods.

b. various kinds of adjectives. They have an attributive origin when they express the senses of quickly or slowly (kṣiprām, cirām), much or greatly (bahū, bālavat), well or badly, boldly (dhṛṣṇū), or direction (as nyāk downward, &c.); e.g. bālavad vāti il blows hard (SB.); bhadrām jīvantah living happily (x. 37°).

a. The acc, adverbs from ordinals seem to have been appositional in origin; e.g. tan va etan sampatan viavamitruh prothamam apasyat (AB.) these same Sampala Ayuna Fierdenitra invested first (= as the

first thing),

8. Several acc. adverbs are from comparatives and asperlatives in tara and tama formed from prepositions and adverbs; e.g. draghlya synh prataram dadhanah abbitaing longer tife furthermore (i. 53¹¹). A good many such have a fear, acc, form in later use, but there is only one found in the RV.; samptaram padukan hara put your tan little feet close together (viii. 33¹⁰).

y. A special class is formed by advertes in vat expressing that an action takes place like that performed by the noun preceding the suffix; e.g. twisloties manuvid vadema (ii. 10°) leaving these as our massenger we would make it like man (= as man should speak) properly assessed.

thing that belongs to men).

3. Another class of acc. adverbs is formed from various adjectival compounds. A number of these are formed with the privative particle a, being of the nature of cognate accusatives; e.g. devás chándobhir imál lokán anapajayyám abby ájayan the gods (enconquerative).

irrespondly conquered these worlds by means of the matrix (TS.).

- e. Another group comparatively rare in V., but very common in B., are those formed from propositionally governing adjectival non-pounds; e.g. snukāmām tarpayathām saliely poursiles consider to desire (l. 172), adhidavatām with reference to the duity (SB.). Probably following the analogy of some of these were formed others in which the first member of the compound is not a preposition, but an advertiderived from the relative y4; e.g. yathā-kāmām ni padyate sies forme in according to her desire (x. 1462), yāvaj-jivām (ax long ax =) for life (SB.). Some other adverbial compounds are used like accounds in am; e.g. stukā-adrgam sratā bhavati it is plathed like a braid of hair (SB.).
- 197. B. The acc. is largely used with verbal nouns. Besides being governed by all participles, active and middle,

and by genuine infinitives, in V. it is used with agent nouns formed from the root or other verbal stems by means of about ten primary suffixes. Such nouns are made from the simple root (when compounded with a preposition), and with the suffixes a (when the stem is compounded with a preposition), ani (from the aor, or desid, stem), i (generally from the reduplicated root), Tyns and istha (comparatives and superlatives), u (from desiderative stems), uka (very rare in V.), tar (when the root is accented), van (when compounded), snu (from causative stems); and a few with the secondary suffix in. Examples of the acc. with such agent nouns are: devams tvam paribhur asi thou encompassest the gods (v. 13°): drina oid arujáh breaking even what is ñem (iii. 452); tvám no visvā abhimātīh saksanih thou overcomest all our adversaries (viii. 2420); satám paro ruruksanih ready to destroy a hundred forts (ix. 482); indes ha rátnam váruna dhóstha Indra and Varana bestow treasure most abundaníly (iv. 413); vatsámá ca ghátuko výkah (AV. xii. 4') and the wolf sloys the calves; data radhamsi sumbhati giving riches he shines (i. 22*); prataryavano adhvaram coming early to the sacrifice (i. 4417); sthird oin namayisnavah O ye who desire to bend even what is rigid (viii, 201); kāmi hi vīrāh sādam asya pītim for the hero always desires ii draught of it (ii, 141).

a. Some adjectives formed with and from prepositions governing the and, are also used with that case. Such are pratyand facing, anvant: following; e.g. pratyand usasam urvipa vi bhati facing the Dann (the fire) shines forth for and wide (v. 28), tannad annul pathigarhapatyan fate know the wife sits tokend the Gallapatyan for (AR.). The acc, is found even with sampatic under; e.g. feather eva enamy sampanam dadhati as puts him into common with the plants (MS.); but this adj. also takes the inst., the natural case with a compound of sam.

B. In B. the only nouns taking the acc. seem to be the des adjectives in u and the ordinary adjectives in uka (which are very common) and those in in; e.g. papmanam apalighamsuh reising to drive away six (AR.), sarpå enem ghåtukah ayuh the saukes might hite

Aim (MS.); aprativady enam bhratreyo bhavati his enemy som not contradict him (PB.).

- c. The acc. is governed by more prepositions than any other case. The genuine prepositions with which it is exclusively connected in both V. and B. are at beyond, and after, abhi towards, prati against, tiras across; and in V. only acha towards. It is also taken secondarily by others which primarily govern other cases (cp. 176. 1, 2). The acc. is further taken exclusively by the adnominal prepositions antara between, abhitas around, upari abore, sanitar apart from; and secondarily by some others (cp. 177. 1-3).
- a. The preposition vina without, except, which first occurs in B. (and there has only been noted once), takes the acc.; and rid without, which in the RV. governs the abl. only, in B. begins to take the acc. also (as it often does in post-Vedic Sanskrit).
- 6. In B. a number of adverbs (inst. of adjectives and substantives or formed with the from pronouns expressive of some relation in space) take the acc.; such are agraph in front of, antarena within, between, distarena worth of, dakainena to the right or the worth of, parena beyond; subhaya-tas on both sides of.

Double Accusative.

- 198. A second acc. appears in apposition with various verbs; e.g. purusam ha vai dova agre pasum a lebhire the gods in the beginning sacrificed a man as a victim (SB.). It is further used:
- predicatively with verbs of saying (brū, vac), thinking (man), knowing (vid), hearing (fru), making (kr), ordaining (vi-dhā), choosing (vr), appointing (ni-dhā) in both V.

and B.; e.g. svånam basto bodhayitaram abravit the ho-goat said (that) the dog (was) the wakener (i. 1811); yad anyo 'nyam papam avadan that the one called the other wicked (SB.); agnim manye piteram Aoni I think a father (x. 75); marisyantam cod yajamanam manyata if he thinks the sacrificer (is) going to die (SB:) : cirám tán mone he thought that too long (SB.); vidma hi tva puravasum we know thee (to be) possessed of much wealth (i. 81"); ná vái hatám vetrám vidmå nå jivåm set know not (whether) Vetra (is) dead nor (whether he is) alive (SB.); revantam hi tva srnomi I hear (about) thee (that thou art) rich (viil. 211); srnvanty enam agnim cikyanam (TS.) they hear (about) him having piled the fire (altar); asman sú jigyúsah krůhi make us thoroughly victorious (viii, 80°); téşām pūsanam adhipam akarot he made Pasan their lord (MS.); tasma ahutir yajham vy adadhuh they made (= ordained) the oblations (to be) the sacrifice for him (MS.); agnim hótáram prá vrno I choose Anni pried (iii, 191); ni tvám agne mánur dadhe jyótir jánkya šákvate Manu has appointed thee, O Agni, az a light for every man (i. 3617).

2 to express the person as a direct object boside the thing with verbs of addressing (vac), asking (prach), begging (yac), approaching with pmyer (i, yā), milking (duh), shaking (dhū), sacrificing to (yaj), doing to (kr); e.g. aguim mahām avocāmā suvrktim to Agm we have addressed a great hyma (x. 80°); prehāmi tvā pāram āntam prthivyāh I ask thee about the farthest limit of the earth (i. 164°); yājāavalkyam dvāu prašnāu praksyāmi I will ask Yajāavalkya two questions (SB,); apo yācāmi bheşajām I beg healing from the waters (x. 0°); tād agnihotry āgnim yācet that the Agnihotr should bog of Agni (MS.); vāsūni dasmām īmahe we approach the wondrous one far riches (i. 42°); tāt tvā yāmi I approach thee for this (i. 24°); duhānty ūdhar divyāni they milk celestial gifts from the udder (i. 64°); imām evā sārvān kāmēn duha from her he (milks =) bitains all desires (SB.);

vrksám phálam dhūnuhi shake down fruit from the twe (iii. 454); yajā devām rtam brhat sscrifice to the gods the lafty rite (i. 755); kim mā karann abatā asya sönāh whot can his feeble hosts do to me ! (v. 30').

a. Of the above verbs was, I and ya, dhin, yal and ky do not seem to be found with two sec. in B.; on the other hand a-gum general, dha with, it wis, jrd erest from are so med there; e.g. aguir val váronam brahmacáryam á gachat Joul (approached -) asked Formu for the position of a religious student (MS.); imal lokin adharms yam-yam kamum akamayata from these secritis he untracted schulerer he shedred (AB.); devan avera yajilam ajayan the Assess som the exercise from the gods (MS.); indro marutah sahasrum aliust fodes egoded a thousand from the Maruta (PB.)

3. to express the agent' with causative verbs beside the acc, which would be taken by the simple verb also; e.g. usan devam usatah payaya havih coner thuself cause the eager gods to drink the libation (il. 37%); ta yalamanam vacayati he makes the sacrificer name them (TS.). With verbs of motion the other sec. expresses the goal (which is, however, never a person)"; e.g. párám evá parävátám sapatnim gamayamasi to the extreme distonce we cause the vival wife to go (x. 1454); yájamánam suvargám lokám gamayatt he causes the sacrificer to reach the celestial icarld (TS.).

w. In St. the agent is frequently put in the inst. Instead of the acc. with various cannatives, especially that of grah wise; a. z. if virumona, agrahayat 'MS.) to cound Farana to exist them (- he caused them to be suized by Varuna ..

b, In B, a second noc. expresses the goal (with at leaf) or duration of time beside the sec, of the object; a.g. evan era enam kurman suvergam lokam nayati these the torists lends bins to the colectial world (TS.), tiero ratrir ventam caret he sanuli charge a find for three mights TS

Which would be expressed by the nom, with the simple varie; e. g. dava havib pibanti the gode drive the libetion.

² When the goal is a person it is expressed by the loc, or a loc. adverty; s. g. agnile agnint gamages he would mud Agnil to Agnil (SB.); devated, and enad gamayari he sends it to the gods (SB.). 文

Instrumental.

- 199. A. The fundamental sense of this case is concomitance, which may variously be rendered by with, by, through, according as it expresses accompanioned, instrumentality or agency, causality, motion through space or duration of time.
- 1. In its sociative sense the instrumental expresses the companion or accompaniment of the subject in any activity; e. g. devô devôbhir â gamat may the god come with the gods (i. 1°); indrena yujă nir apâm aubjo arnavâm with Indra as thy companion thou didst release the flood of waters (ii. 231°); indre no râdhasă â gamat may Indra come to us with wealth (iv. 551°).
- a. Similarly in B.: agnir vasubhir ud akrāmat Indra departed with the Fassa (AB.); yona mantrena juhoti ted yajuh the spell to the accompuniment of which he affect the ablation to the Fassa (SB.); ted anya without Adstranta they tries to take it from him by force (TS.).
- 2. In its instrumental sense it expresses the means (person or thing) by which an action is accomplished; e.g. vayam indrena sanuyama vajam we would win booty through Indra (i. 10111); ahan vṛtram indro vajrena Indra smote Vṛtra with his bolt (i. 321).
- a. Similarly in B.; kens virena by whom as champion (SB.); dirana bijam haranti they carry corn (with -) on the head (SB.); thamad daksinana hastena annam advata therefore find is enten with the right hand (MS.).
- 3. In its causal sense it expresses the reason or motive of an action = by reason of, on account of, for the sake of; e.g. somasya pityá... á gatam come hither for the sake of the Soma draught (i. 46¹³); asatrúr janúşā sanád asi thou art by the nature without foes from of old (i. 102°).
- u. Similarly in B. : ná bhist ni lilyo le commica himself firough jear (SB.) ; = chimà ly name.
 - 4. In its local sense of through or over it is used with

verbs of motion to express the space through or over which an action extends; e.g. divå yanti marato bhamya agnir ayam vato antariksena yati the Marats go along the sky, Agni over the earth, the Wind here goes through the air (i. 1611); antarikse pathibhih patantam flying along the paths in the air (x. 87°).

- a. In B. the constantly used in the local sense with words meaning puth or door, but rarely with others; e.g. raths. Absertation 'nyone paths nayet as if one who does not know the district very to knot by a serong road (SR.); expanyatys yantl they go along the Stranger (TS.).
- 5. In its temporal sense the inst. expresses the time throughout which an action extends; e.g. purvibhir dad&imā śarādbhih we have worshipped throughout many autumns (i. 86°). Sometimes, however, the sense of duration is not apparent, the inst. being then used like the loc. of time; thus rtunā and rtubhih mean in due season.
- a. In B, the temporal meaning is rare; e.g. at va i yumātrām evāhnā tiryānh avardhata às grees in the course of a day quits on sures a length in solute (MS.).
- 6. Many instrumentals (chiefly of the sociative and local classes) have come to be used in a purely adverbial sense. Such are formed from either substantives or adjectives (of which sometimes no other form occurs); e.g. áðjasá straightway, máhobhih mightily, sáhasá and sáhobhis suddenly; ántarena within, úttarena to the north; uccáis above, nicáis below, parácáis sideways, prácáis forwards, sánais and sanáis, sanakáis slowly.
- a. In a number of these instrumentals the adverbial use is indicated, not only by the sense, but by a shift of account; e.g. divâ by day; dak-sină b De viobi; madhyâ between; naktayâ by night; avapnayâ in a draw; akanayâ across (B.); anomalously formed from u stema; âânyâ quichty, dhṛṣṇuyâ boldly, raghuyâ swiftly, sâdhuyâ sraighanay, mithuyâ falsdy (mithyâ SB.), anuṣṭhuyâ mmediately 'anuṣṭḥyâ B.); and from a pronoun, amuyâ in that soay.
- 199. B. Besides having the above general and independent uses the inst. also appears, in special connexion with

different classes of words by which it may be said to be 'governed':

1. with verbs expressing:

a. association or contention with; in RV.: yat marshal, yad combine, yuj join (mid.), sac accompany; yudh fight, sprdh strive, has race, krid play; in B.: yudh fight, vi-ji contend victoriously (with).

b. separation from (compounds with vi); in RV:: vi-yu dissever from, vi-vrt turn away from, vy-ā-vrt separate (intr.) from; in B.: vy-ā-vrt id., vi-rdh be deprived of, vi-sthā be removed from, visvanā i go away from = lose.

c, enjoyment; in RV.: kan find pleasure in, mad be exhibitrated with, up be fond of, tus be satisfied with, man delight in, hrs rejoice in, bhuj enjoy; in B.: trp be pleased with, nand be glad of, bhuj enjoy.

d. repletion; in RV.: pr fill (acc.) with, pr swell with; in B.: caus. of pr: puraya fill, pass. purya be filled with.

e. purchase for (a price); in V.; vi-krī bargain away for;
 in B.; nis-krī ransom for.

f. adoration or sacrifice (the victim or object offered). With yaj sacrifice to the deity is in the acc. in both V. and B.: in B. the sacrificial date also is put in the (cognate) acc.; e.g. amavasyam yajate he relebrates the feast of new moon.

g. procedure: the verb car in both V. and B.; e.g. adhenva carati māyāyā he ucts with barren eraft (x. 71°); upāmāu vāoā carati he proceeds in a low tone with his voice (AB.).

h. ability to do: the verb kr in both V. and B.; n.g. kim rea karisyati what will be do with a hymn? (i. 16430); kim sa tair grhaib kuryat what could be do with that house? (SB.). In B. the phrase artho bhavati there is business with = there is need of (Lat. opns est aliqua re) is similarly used:

Sometimes also with the gen.; the past part, pass, paras with the gen. = full of, but with the inst. filled with.

e. g. yarhi vāva vo mayārtho bhavitā if you (gen.) shall have need of me (AB.).

 dominion: only (in V.) the verb patya be lord of (lit. by means of); e.g. indro viśvair viryaih patyamanah Indra who is lord of all heroic powers (iii, 54)⁵).

j. subsistence: only (in B.) the verb jiv lies on, subsist by; e.g. yaya manusya jivanti (the cow) on which men subsist (TS.).

a. With passive forms of the verb (including participles) the inst, expresses either the means (as with the active verb) or the agent (the nom, of the setive verb); e.g. shrténa aguit sam alyate Agui is aminted with ghes (x. 1184); uså nohinti ribhyste västethath Usus iokes abs dances is present by the Vanighus (vii. 767). Similarly in B.: prajápatina srjyante they are created by Prajápati (MS.); pátrair annam adyate food is suign with the aid of dishes (MS.).

8. Naminal forms connected with the verb, when they have a passive sense, as gerundives and infinitives, take the same construction; e.g. afbhir havyah to be insched by man (vil. 227); ripuna na, avacakae not to be observed by the same (iv. 582).

2. with nouns:

a. substantives and adjectives (especially those compounded with sa-) expressive of association or equality; e.g. nasunvatā sakhyam vasti šūrah the hero desires not friendship with him who does not press Soma (x. 424); asi samo devaih thou art equal to the gods (vi. 4849); indro vai sadrh devatābhir ūsīt Indra was equal to the (other) deities (TS.); ajyena mišrāh mired with butter (SB.).

b. other adjectives, to express that by which the quality in question is produced; e.g. ûşo vâjena văjini O Dawn rich in booty (iii. 61); bahûh prajáyā bhavişyasi thou will be rich in offspring (SB.).

c. numerals accompanied by ná, to express deficiency; e.g. ckáyá ná vimástih not twenty by (lack of) one = nineteon.

3. with prepositions: genuine prepositions are virtually not used with the instrumental. The only exceptions in

the RV, are the employment of adhi with the inst. of snu height; of upa in three passages with dyubhis and dharmabhis; and possibly of sam with in a few passages with the inst. But prepositional adverbs are found thus used; in the RV, only avas below and paras above; and in both V, and B, saha and sakam with. Cp. 177, 2.

Dative.

200. The dative expresses the notion with which an action is concerned. It is either connected with individual words or is used more generally as a complement to the whole statement.

A. Dative in a special sense with:

1. verbs (mostly as affecting persons) having the sense of a. give; in V. B. dā give, yam extend, dhā bestow, bhaj apportion; e.g. dádhāti rātnam vidhaté he bestows treasure on the worshipper (iv. 123); in V. also many other verbs expressing a modification of the sense of giving: dis assign, ava-duh milk down on, pr bestow fully, pro bestow abundantly, mamh give liberally, mā measure out, rā procure (for), ni-yu bestow permanently, vid find (for), san obtain (for), sū set in motion (for), srj shed (for), and others.

b. sacrifice; in V. ä-yaj offer to (while yaj takes the acc.); and in V. B. ky when = make an offering to; in B. ä-labh (catch and the up =) offer; e. g. agnibhyah pasun a labhate he sacrifices the animals to the Agnis (TS.).

c. say = announce, explain (but with acc. of person if = address); in V. B. ah, brū, vac, vad (in B. also ā-caks); in V. also are and gā sing to, stu utter praise to, gir, rap, šams praise anything (acc.) to. In B. also: ni-hnu apologize to; e.g. tad u devebhyo ni hnute thereby he craves pardon of the gods (SB.).

d. hear: in RV, a few times &ru = listen to; also ram linger for = listen to.

c. believe, have confidence in : śrád dhā ; e. g. śrád asmai dhatta believe in him (ii, 12'); in B. also ślágh trust in.

f. help, be gracious to, pay homnge to; in V. šak aid, sidh avail; sam-nam be complaisant to; dasasya pay honour to, saparya do anything (acc.) in honour of (a god); das, vidh, sac pay homage to (a god), sam serve (a god); in V. and B.: mrd be gracious to.

g. bring: nī, bhr, vah, hi, hr; e.g. amā saté vahasi bhūri vāmām for him who is at home thou bringest much wealth (i. 12412): devébhyo havyām vahanti they take the oblation to the gods (TS.); tām harāmi pitryajūāya devām that god I bring to the sacrifice for the Manes (x. 1612); višaḥ kṣatriyāya balim haranti the peasants bring the taxes to the nobility (SB.). In V. only there are many other verbs, with this general sense, that take the dative, such as r, inv, cud set in motion for, and figurative expressions such as abhi-kṣar stream to, dī and śuo shine on, pruṣ sprinkle on, abhi-vā waft to: in V. also the verb i go is used with the dat.; e.g. prā viṣṇave śūṇām etu mānma let my strong hymn go forth in honour of Vianu (i. 1542).

h. please: svad be sweet to and chand be pleasing to; v. g. svådasva_indraya pitáye be sweet to Indra as a draught (ix. 74°); uto tád asmai mádhv ic cachadyat and may that mead be pleasing to him (x. 75°).

 succeed: in B. rdh and klp; e. g. na ha_eva_asmai tat sam anrahe he did not succeed in that (SB.); kalpato 'smai he succeeds (TS.).

j. subject to: radh; e. g. asmábhyam vytrá randhi subject our fees to us (iv. 22').

k. yield to: radh succumb, nam and ni-hā bow before, sthā obey, mrad and kṣam (B.) yield to, ā-vraśc fall a victim to; e.g. mó ahám dviṣatô radham may I not succumb to my enemy (i. 50th); tasthúh saváya to they obey thy communit (iv. 54°).

t. be anary with; in V. hr (hrnite); in V. and B.: asuya

and krudh; in B. also arătiya be hostile and glā be averse to.

m. scel to injure: in V. and B. druh; e. g. yád dudróhitha striyái pumsé what mischief thou hast done to woman or man (AV.).

n. east at: V. srj discharge; V. B. as throw; B. pra-hr hard at; e.g. srjåd åstå didyum asmai the archer shot a lightning shaft at him (i. 713); tåsmai tåm işum asyati he shoots the arrow at him (MS.); våjram bhråtrvyåya prå harati he huris the bolt at the foe (TS.).

o. exist or be intended for, accrue to: as be, bhû become; o.g. gambhiré cid bhavati gadham asmai even in deep water there is a ford for him (vi. 24*); indra tubhyam id abhûma we have become thine own, O Indra (TS.); atha kô mahyam bhāgô bhavişyati then what share will accrue to me (SB.).

- a. The dative is used with gerundives and infinitives to express the agent, and with the latter also the object by attraction instead of the sec.; e.g. yah atoribhyo havyo asti was to be invoked by stagors (1.33°); vi stayantam prayai devébhyah lei (the doors) open wide for the gode to only (1.142°; indram arkair avardhayann ahayo hantava u they strongthened Indra with human to slay the serpent (v. 31°).
- 2. The dative is used with a certain number of substantives.
- a. Such are words that invoke blessings, especially names homage (with the verbs kr do or as be, which are often to be supplied); e.g. name mahadbhyah homage to the great (i. 2713); name 'stu brahmisthaya adoration to the greatest Brahman (SB.). Similarly used are the sacrificial formulas svähä, avadhä, väṣaṭ hail! blessing! e.g. tébhyah svähä blessing on them (AV.).

a. The indeclinables sam in V. and kam in B. meaning refere are used as nom, or acc, with the dat.; e.g. yatha sam asad dyspade estumpade to enter that there may be negler for biped and quadroped (i.114*); shutayo by aguaye kam for the obletions are a pay to Agm (SR.); na_ama a-kam bhavati a does not fore it with him (TS.).

- 8. In V. the substantives kāma desire and gatū path may perhaps be regarded as taking a dative without a verb to be supplied; e.g. kṛṇvānāso amṛtaivāya gātūm procuring for themselves a path to immortality (1.72).
- 7. In the name Dasyave vianh Wolf to the Dasya (RV.) the dal, is to be explained as due to its use in the sentence he is a very cost to the Dasya.
- 3. The dative is used with adjectives meaning dear, kind, ugrecable, beneficial, willing, obedient, ill-disposed, hostile; e.g. śivä sákhibhya utá máhyam äsít she was kind to friends and also to me (x. 342); átithiś cárur áyáve a guest dear to man (ii. 23); yád vává jīvébhyo hitám tát pítřbhyah what is good for the living is good for the Manes (SB.); sá rātámanā vrášcanáya bhavati (SB.) he is ready for felling (the tree); pratyudyāminīm ha kṣatrāya višam kuryāt he would make the peasantry hostile (o the nobility (SB.).
- a. The adj. anagas states often seems to take the dative of the name of a delty, but it is somewhat uncertain whether the case should not be connected with the verb; e.g. anagaso aditage syama may see be scatter (to =) in the spar of Aditi (i, 24^{13}) may perhaps mean may see, as states, telong is Aditi.
 - 4. The dative is used with a few adverbs.
- a. aram often takes the dat.; e.g. yé áram váhanti manyáve who drive in accordance with (thy) zeal (vi. 16¹⁰). This use of áram is common in combination with the verbs kr, gam, and bhû. When used with the dat. áram is not infrequently equivalent to an adj.; e.g. sásmá áram he is ready for him (ii. 18²); ayám sómo astu áram mánase yuvábhyám let this Soma be agreeable to your heart (i. 108²). In B. álam appears in the place of áram and is often similarly used; e.g. nálam áhutyá ása, nálam bhaksáya he was not suitable for sacrifice, nor suitable for food (SB.).
- b. The adverb āvis visibly is used with the dat. In V. and B., but only when accompanied by the verbs kr, bhū or as (the latter sometimes to be supplied); e.g. āvir ebhyo abhavat suryah the sun appeared to them (i. 146'); tásmai vá āvir asāma ee will appear to him (SB.).

B. The dative also in a general sense complements the statement of the whole sentence.

- 1. It expresses the person for whose advantage or disadvantage the action of the sentence takes place; e. g. deván devayató yaja worship the gods for the benefit of the piaus mun (i. 1512); tásmá etám vájram akurvan for him they made this bolt (SB.); tasmá upákṛtāya niyoktāram na vividuḥ (AB.) for him when he hud been brought near they could find no binder (i.e. they could find no one willing to bind hûn).
- 2. It expresses the purpose for which an action is done (final dative); e.g. firdhvás tiṣṭhā na ūtáye stand up for our help = in order to help us (i. 30°); ná súṣvim indro ávase mṛdhāti Indra will not leace the pious man in the lurch for help (vi. 23°); svargāya lokāya viṣṇukramāḥ kramyante the Viṇnu steps are taken for the sake of (= in order to gain) heaven (TS.); agniṃ hotrāya prāvṛṇata they chose Agni for the priesthood = in order that he should be priest (SB.). The final sense is commonly expressed by abstract substantives (including in V. many infinitives); e.g. ādhi śriyè duhitā sūryasya rāthaṃ tasthau the daughter of the san has mounted the ear for beauty = so as to produce a beautiful effect (vi. 63°); tēna govā enaṃ sāṃ sṛjati śāntyai with him (Mitra) he unites him (Agni) for appeasement (TS.).
- a. This final dat, is particularly used with as and bhū;
 e.g. åsti hi şmā mādāya vaḥ there is (something) for your intarication, i.e. to intoxicate you (i. 37¹⁵); mādāya sómaḥ (sc. asti) Somu (is for=) produces intoxication (SB.).
- 3. The dative is used, though rarely, in expressions of time like the English for; e.g. nunam an indra aparaya ca syah now and for the fature mayst thou be ours, O Indra (vi. 33); samvatsaraya sam amyate for a year an alliance is made (MS.).

v. The iterative compound dive-dive day by day, though apparently dat, of div, is probably in reality meant for the loc, of the transfer stem diva.

- Two datives connected in sense often appear together.
 This occurs in V. when an acc. is attracted by a dative infinitive; e.g. vrtraya hantave = vrtram hantave to slay Vrtra (cp. 200. A. 1 σ α).
- a. There is an analogous use in B., where, however, an abstract substantive takes the place of the infinitive; a.g. yatha_idam panishyam avanajamaya_aharanty evam just as they bring it for scanning the hands (SB.). Two datives are here often found with the verb stha, one expressing the purpose, the other the person affected by the action; a.g. developing passive 'nnadyayalambaya na_atisthanta the unimals did not general themselves to the gods for feed, for survive (AB.).
- 5. The adverbial use of the dative is very rare: kāmāya and ārthāya for the sake of may be regarded as such; kāmacārásya kāmāya for the sake of unrestrained motion (ŚR.); asmākārthāya jajñise thou hast been born for our sake (AV.).

Ablative.

- 201. The ablative, expressing the starting-point from which the action of the verb proceeds, may as a rule be translated by from. It is chiefly connected with various classes of words, but is also used independently.
 - A. In its dependent use the ablative appears with:
- 1. verbs a. expressing a local action, as 90, proceed, drive, lead, take, receive; pour, drink; call, loosen, ward off, exclude; e.g. type gavo na yavasad agopah they went like unherded kine from the pasture (vii. 181"); verrasya svesathad isamanah fleeing from the snorting of Vrtra (viii. 96'); asatah sad ajayata from non-being arose being (x. 72"); abhrad iva pra stanayanti vestayah from the cloud as it were thunder the rains (x. 75"); tvam dasyamr okasa ajah thou drovest the enemies from the house (vii. 5"); bhujyum samudrad ühathuh ya two kave barne Bhujyu from the sea (vi. 62"); daso hiranyapindan divodasad asanisam ten lumps of gold I

have received from Divodasa (vi. 472); ápād dhotrād utā potrād amatta he has drank from the Holy's vessel and has inturicated himself from the Potr's vessel (ii. 374); māruto yād vo divāh hāvāmahe O Maruts, when we call you from heaven (viii. 711); šūnaš cie chépam yūpād amuñcah thou didst release Šunukšepa from the post (v. 271); yuyutām asmād ānirām āmīvām ward off from us siekness and calamity (vii. 713).

w. Examples from B. are: yad dhaved annadyad dhavet (/ hs were to run, he would run ususy from his food (TS.); at rathat papata he fell from his our (SR.); divo vistir irre vain comes from the sty (TS.): ranyah kavasum addasan somad anayan the vers led Komps Alikes many from Soma, i.e. excluded him from it (AB.); man asmal lokad anudanta they drove them many from this world (AB.); themad anasa eva grinniyat therefore he should take it from the care (SB.); kessavat purugat sisana parisrutany krinati ha bapa the Foresrut from a long-haired man for lead (SB.); at eva enamy vermanyahan mudanti he releases him from the fetter of Various (TS.); suvvargat lokad yajamano hiyeta the merificer would full there of hereon (TS.). The two verbs antar dha hide and ni-li countst ossessif are need with the abl. in B. only: vajruna_onan savargat lokad antar dadhyat he mentid exclude him from hances with the belt (TS.); agair davébhiyo ni-layata Apm conceuted himself from the gods (TS.).

b. expressing rescue, protect; fear, dislike; transcend, prefer; verbs with the latter two senses as well as urusya protect, raks yourd, and rej tremble take this construction in V. only; på and trå protect and bhi fear in both V. and B.; gopåya protect, bibhatsa be disgusted with in B. only; e.g. amhaso no mitra urusyet may Mitra rescue us from distress (iv. 55°); så nås tråsate durität he shall protect us from misfortune (f. 128°); indrasya våjråd abibhet she was afraid of Imbra's bolt (x. 138°); prå sindhubhyo ririce, prå ksitibhyah he reaches beyond rivers and beyond lands (x. 89°1); sómåt sutåd indro avroita våsisthän Indra preferred the Vasisthas to (Päsadyumna's) pressed Soma (vii. 33°).

a. With bhi two ablatives are found, the one being the object feared, the other the action proceeding from it; e.g. indrasya vajrad abibbed abhisnathah she was afraid of

Indra's boll, of its crushing (x. 1385), i.e. that it would crush her; asurarakṣasébhya āsaṅgād bibhayām cakruh they were afraid of the Asuras and Rakṣasas, of their attachment = that they would attach themselves to them (SB.).

- 2. substantives when derived from, or equivalent to, verbs used with the ablative; e.g. sarma no yamsan trivarutham amhasah they shall grant us thrice-protecting shelter from distress (x. 66°); upa chayam iva ghiper aganma sarma te vayam we have entered thy shelter like shade (that protects) from heat (vi. 16°); raksobhyo vai tam bhisa vacam ayachan they restrained their speech from fear of the demons (SB.).
- ö, adjectives: in V. and B. comparatives and adjectives of cognate sense, when it means than: e. g. ghṛtat svādīyaḥ sweeter than butter (viii. 24^m); viśvasmād indra úttaraḥ Indra is greater than every one (x.86); jātāny āvarāṇy asmāt born later than he (viii. 96°); pūrvā viśvasmād bhūvanād abodhi she has awakened cartier than every being (i. 1232); pāpīyān āśvād gardabhāḥ the ass is worse than the horse (TS.); brahmā hi pūrvam kṣatrāt the priesthood is superior to the warrier class (PB.); anyo vā ayam asmād bhavati he becomes other than we (AB.).
- a. In B. several local and temporal adjectives: arvaefna ècion, urdhvá etere, jihmá asiant; arváno tejere, paráde after; e.g. yát kim oa arváefnam ádityát minterer is beles the sen (SR.); etőamás cátvalád ársihváh svargám tokám upód akráman spennti from that put they assended to horses (SR.); yajháj jihmá tyuh they (could se abliquely from = 1 leas the sucrifice (AR.); daśa vá etasmád arvádosa triveto, daśa parádeah ten Trispis over before il and ten after il (AR.).
- 6. In B. adjectives in uka, which with bhi are equivalent to a verb; a.g. yajamānāt pašavo 'nutkrāmukā bhavanti tie animale are not jarimed to run many from the surrider (AR.).
- s in B. numerals, both ordinals and cardinals; with the former the abl, expresses the point from which the rockoning is made; e.g. lavaro has a small divitiyo va tritiyo va brahmanatam athyunaltob the sound or third (in descent) from him can ablain Brahminhood (AB.); with the latter it expresses the figure by which the complete number is defective; e.g. &kin na fathin as a sandorf by one a about nice.

Analogously with words meaning incomplets the abl, expresses the amount of the deficiency; e.g. skasmad aksarad anaptam (a verse) incomplete by one splinible (TS.); tesim alpakad eval again assumpts assume that the faller one (altar) was not completely pilot up by a little only, i.e. was almost completely pilot up by a little only, i.e. was almost completely pilot up (SB.).

- 4. adverbs meaning before, beyond, outside, below, far from, without are used prepositionally with the abl. Those occurring in V. only are; adhás below, avás down from, aré without, purás before; in V. and B.: pté without, tirás upart from, parás outside, purá before; in B. only: abhyardhás far from; bahís outside. Cp. 177, 3.
- a. In B. some other adverbs with a local or temporal sense; e.g. dörám ha vå asmán mrtyúr bhavati death is far from him (ŚB.); tásmán madhyamác chañkór daksiná páñcadaśa vikramán prá krámati he strides forward fifteen steps to the right of this middle peg (ŚB.); präg ghomát before (making) the oblation (AB.).
- B. The abl. is used independently of any particular class of word to express the reason of an action in the sense of an account of; e.g. må nas tásmád énaso deva ririgah let us suffer no harm, O god, on account of this sin (vii. 893); ánrtād vái táh prajá váruņo 'grhņāt by reason of their quilt Furuna seised creatures (MS.). Similarly in B.: tásmád therefore; kásmát wherefore?

Genitive.

- 202. The genitive is a dependent case, being in its main uses connected with verbs and substantives, but also appearing with adjectives and adverbs.
- A. With verbs the gen. has a sense analogous to that of the acc., but differs here from the latter in expressing that the action affects the object not as a whole, but only in part. It is used with verbs having the following senses:
- a. rule over, dispose of: always with kai and rai, nearly always with irajya and is travely acc.). In B. the only verb

- with this sense taking the gen. is is have power over; e.g. atha, esam sarva ise then every one has power over them (MS.).
- b. rejoice in: always with trp, pri, vrdh; optionally with kan and mad (also inst. and loc.), and with the caus. of pan (also acc.).
- a. In B. the only verb of this group taking the gen, is trp in a partitive sense; e.g. impasys trpysti he refresher himself with (some) final (SR.).
- c. take note of: always with 2. kr speak highly of and a-dhi think about, care for; alternatively with acc.: cit observe, attend to, budh take note of; adhi-i, -gam, -ga attend to, care for; vid know about (with acc. know fully); aru hear (gen. of person, acc. of thing, heard). In AV. kirtaya mention and smr remember take the gan.
- c. In B. only three verbs of this class are thus construed; yid and fru as in RV., and kirtaya mention.
- d. partitiveness (while the acc. with the same verbs expresses full extent):
- vat, drink: as cat of, ad cat (almost exclusively with acc.); pā drink; ā-vṛṣ fill oneself full of, vī and jus enjoy.
- n. In B. only as and ph besides bhaks on (in RV, with acc, only) take the partitive gen.
- give, present, sacrifice: dā give of, ā-dašasya and šak present with; pro give abundantly of; yaj sacrifice (acc. of person, gen. of offering), e.g. sómasya två yaksi I will worskip thee (with a libation) of Soma (iii. 58°).
- a. In B. yat may be used without acc. of the person; e.g. tasmed alynaya, eva yajot therefore he should surface some butter (SB.).
- 6. In B. several verbs having the general sense of giving and taking, not so used in V., come to be used with the gen, of the object in a partitive sense; vap erms, bu after, abhi-ghar poor upon, ava-da act of some of, k-sent strip, upa-str spread over, ni-han (AV.) and pra-han stoke, vi-khan day up some of; grabh take of and in the passive be selected a suffer in (a part of the body); e. g. na cakeupo griss he sheemed vertice in his one (MS.); yo vaco grittah who suffers to his voter (MS.).

7. In B, ann-brû facile is used with the dat, of the god and the gen, of that to which he is invited; s. g. agni-somabbyam medase 'nu brûhi invite Agui and Samu to the fat (SR.).

e. obtain, ask for: bhaj participate in (with acc. obtain); bhiks beg for: i and id implore for (generally acc. of thing as well as person); e.g. tam imahe indram asya rayah ner implore Indra for some of that nealth (vi. 223); iyate vasunam he is implored for some of his riches (vii. 325); also ü-yu take possession of.

a. Of these verbs bhaj remains in use in B. ; with gen. - Ance a share in (with acc, receive as a share).

f. helong to: as and bhû, with the gen. of the possessor in both V. and B.: e.g. asmākam astu kévalah let him exclusively he ours (i. 710); átha abhavat kévalah sómo asya then Soma became exclusively his (vii. 98'); mánor ha vå rşabhá šsa Manu had a bull (SB.); tasya šatam jäyä babhûvuh he had a hundred wires (AB.).

B. The genitive is used with two classes of substantives.

1. It depends on verbal substantives and is then allied to the gen, with verbs (especially those expressing possession),

a. The subjective gen., which is equivalent to the agent of the action expressed by the cognate verb; e.g. usaso vyūstau at the break of dawn = when the dawn breaks; apakramād u ha evā eṣām etād bibhayām cakāra he was afraid of their departure (SB.) = that they would run away. It very often occurs with datives; e.g. yajūāsya sampādhyai for the success of the sacrifice (TS.) = that the sacrifice might succeed.

b. The objective gen., which is equivalent to the object expressed by the cognate verb; e.g. yogo vajinah the yoking of the steed = he yokes the steed; pura vertrasya vadhat before the slaughter of Vetra (SB.) = before he slaw Vetra. It often occurs with datives; e.g. yajamanasya ahimsayai for the non-injury of the sacrificer (MS.) = in order not to injure the sacrificer.

- a. This genitive is common with agent nouns, especially those in if: a.g. rayo data giver of scalib (vi. 2310); push pashnam prejanatith Frame is the propagator of catile (MS.). But in V. the agent nouns in tr with few exceptions take the acc. when the root is accented; e.g. data vasa was given results (vi. 232).
- The gen. commonly depends on non-verbal substantives.
 It may then have two senses:
- a. The possessive gen.; e.g. véh parnám the wing of the bird = wing belonging to the bird; devánám důtáh the messenger of the gods. It also appears with abstract nouns derived from such words; e.g. ad id devánám úpa sakhyám áyan then they came to friendship with the gods (iv. 33°) = then they became friends of the gods.
- a. The gen, used with the perf. pass, part., fell to be the agent, is a variety of the possessive gen. Already appearing a few times in the RV. it is common in B.; e.g. patyuh kritá (MS.) the bought (wife) of the kushand (the wife) bought by the kushand.
- 6. The gen, is similarly used with the gerundive; e.g. anyasya baliked anyasya, adyah passay mores to another, to be decoured by another (AB.).
- 7. The gen, is frequently used possessively where we would use a dative; e.g. tasya ha putro jajde a son of his constorn = a son reas form (AB.).
- & The gen. is occasionally used for the dative with frad dha believe and da give in the AB. This use may have started from the possessive sume.
- b. The partitive gen. expresses a part of the whole; e.g. mitro vat sivo devanam Mitro is the kindly one among the gods (TS.). If the gen. is a plural of the same word as that on which it depends it is equivalent to a superlative; e.g. sakhe sakhinam O friend among friends = best of friends (i. 8011); mantrakṛtām mantrakṛt best of composers of hymns (B.).
- a. This gen. is in particular used with comparatives and superlatives (including prathams first, carama lest, &c.); e.g. na para ligge katarás candinob sul cither of the loss of them conquered (vi. 69°); gardabháb pasunam bharabharitamah the use is the lest bearer of burdens manag minuts (TS.).

- 3. It is used with numbers above nearly (in B. only with sahásram) and words expressive of a division or a measure; e.g. sastim áévánám (an aggregate of) sirly korses; gónám archám kelf of the core; gávány yútháni kents of core. Samotimes this gen, is used by transference to express not a part, but the whole; as in marchám ganáh the kor (consisting) of the Maryts.
- y. The gon, sometimes expresses the material; e.g. kṛṣṇṇṇṇm vrikiṇṇṇ variṇṇ śrapayati he nocks a meas of black ciw (SB.); etáṇṇm vṛṣṣṇṇṇm bhavanti they (the fences) are (made of the wood) of flees (SB.). It is used in this sense with the verb kṛ; e.g. yā evā kās ca vṛṣṣṇḥ phalagrāhia tāsya kāryā schulerer tree bears frieit, of (a part of) that it is to be made (MS.).
- C. The gen, is used with a few adjectives meaning attached to, like, capable of, knowing, offering, abounding in: priya dear, anuvrata obedient; pratyarchi standing at the side of; anurupa similar; isvara able to, navedas cognisant of; papri bestowing abundantly (partitive gen, of the thing offered, e.g. anchasah of the inice (i. 52°); and with the participles, used like adjectives, purpa full of, pipivams abounding in.
- D. The gen, is used with certain adverbs having I, a local sense: in V. agratás before (AV.); in V. and B.: dakṣiṇatás to the right of; avástād below, parástād above, purástād before; in B.; apáriṣṭād behind, paścād behind, purás before; antikám near, nédiyas nearer, nédiṣṭham nearest.
 - e. In the RV, are for from takes the zun. (also the abl.).
- B. In B. the local adjective (like the local adverba) udane northward of takes the gen.
- 2. a temporal sense: idå and idånim non are used in V. with the genitives åhnas and åhnām = at the present time of day; prātār early with the gen. åhnas in V. and with rātryās in B.; e.g. yāsyā rātryāh prātār yakṣyāmānah syāt in the morning of which night he may be about to sacrifice (MS.).
- 3. a multiplicative sense: in V. sakft once with ahnas once a day; tris thrice in trir ahnas, trir a divah thrice

a day and trir aktos three times a night; in B.: dvis twice and tris thrice with samvatsarasya, twice, thrice a year.

a. The advertial use in V, of the gen, in a temporal source is parhaps derived from that with multiplicatives: aktós, ksapas and ksapás of a cipát; vástoc and usásas of a morning.

Locative.

- 203. This case expresses the sphere in which an action takes place, or with verbs of motion the sphere which is reached by the action. Its sense includes not only locality (both concrete and abstract) but pursons and time. It may therefore be variously translated by in, on, ut; beside, among, in the presence of; to, into.
- A. The loc appears in a general and independent way in the following senses:
- Place: a, concrete; e.g. divi in heaven, parvate in or on the mountain (i. 322); sarasvatyām at the Sarasvati (iii. 234); yudhi in battle (i. 83), samgrāmē id. (SB.).
- b. abstract; asya sumatau syama may we be in his good graces (viii. 4812); tad indra to vaso that, O Indra, is in thy power (viii. 984); ya adityanam bhavati pranitau who is in the guidance of the Adityas (ii. 2713); vajrasya yat patane padi susnah when upon the flight of the bolt Susna fell (vi. 200); ghṛtakirtau at the mention of (the word) ghee (SB.).
- 2. Persons: e.g. yát kim ca duritám máyi whatever sin there is in me (i. 23²²); pipáya sá śrávasa mártycsu he abounds in fame among mortals (vi. 10³); yát sthó druhyávy ánavi turváse yádau, huvé vám whether ye tuco are beside (with) Druhyu, Aua, Turvasa (cv.) Yadu, I call you (viii. 10³); vayám syáma várune ánagáh muy we be guilless in the eyes of Varuna (vii. 87³); asmín pusyantu gópatan let them prosper under this herdsman (x. 19³).
- Time: here the loc. expresses that an action takes place within the limits of the time mentioned; e.g. usaso

vyūstau at the flush of dawn; usāsi in the morning (in B. prātār is used instead): dyāvi-dyavi every day (not used in B.); trīr āhan three times in the day (in B. gen. only); jāyate māsī-māsi he is born (once) in every (successive) month (x, 523).

- a. This temporal use sometimes comes to mean that something happens at the end of the period; e.g. samvatsara idam adya vy akhyata ye hare eposed your eyes now to-day (for the first time) in a year (i. 1612) at the end of a year; tatah samvatsara purusah sam abhavat there arow in (~ at the end of) a year a man (SR.).
- 4. Adverbially. A few substantives and adjectives are thus used; e.g. agree often occurs in the sense of in front and at first, appearing even in compounds (e.g. agre-ga going before, agre-på drinking first); in SB, the loc. of kṣiprā quick is several times thus employed, e.g. kṣiprē ha yājamāno 'mum lokām iyāt the sucrificer would speedily go to yonder world.
- 204, B. The loc is connected with different classes of words by which it may be said to be governed.
 - I. It is specially connected with verbs expressing:
- a. in V.: rejoice in; grow, prosper; bless, injure in respect of; implore, invoke for (i, hû); receive from; e.g. višve devā havişi mādayadhvam do ye, O all-gods, rejoice in the oblation (vi. 521); tāviṣiṣu vāvṛdhe he grew in strength (i. 522); yā eṣāṃ bhṛtyām ṛṇādhat sā jīvāt he who will succeed in their support, shall live (i. 841); prāva nas tokô bless us in children (viii. 2311); mā nas tokê rīriṣāḥ injure us not in our children (i. 11411); agniṃ tokê tānaye śāśvad īmahe Agni we constantly implore for children and for grandchildren (viii. 71111); ādhā hi tvā hāvāmahe tānaye góṣu apsū for we invoke thee for offspring, cows, water (vi. 1911); devēṣu amṛtatvām ānaša ye received immortality (umong =) from the yods (iv. 361);

in V. and B.: let share in (a-bhaj) and struggle for (sprdh, rarely in V.); e.g. yan abhajo maruta indra some the

Maruls whom thou, O Indra, didst allow to share in Soma (iii. 85°); anu no 'syam pṛthivyam a bhajata let us have a share in this earth (SB.); adityas on ha va angirasas ca svarge loke 'spardhanta the Adityas and the Angirases struggled for (the possession of) the heavenly world (AB.);

in B.: request (is), ask (prach), call in question (mimāms); e.g. sā ha iyām devēsu sutyāyām apitvām ise she requested from the gods a share in the Sama feast (SB.); to devesv

aprehanta they inquired of the gods (PB.).

- b. in V. and B.: motion, to indicate the place that is reached. The case may here be translated by to, into, upon. Such verbs in V. are: go (gam), enter (ā-viś), ascend (ā-ruh), descend (ava-vyadh), flow (ars, dhāv), pour (sic, hu), put (dhā, kṛ): e.g. sá id devéṣu gachati (i. 14) that goes to (= reaches) the gods (while deván gachati would mean goes in the direction of the gods); yó mártyeṣv it kṛṇótī deván who brings the gods to mortals (i. 774); vīryāṃ yájamūne dadhāti he puts energy into the sacrificer (TS.); nā vā eṣā grāmyéṣu paśuṣu hitāḥ he (is not placed among =) does not belong to the tame animals (TS.). In B. verbs meaning to throw at are especially common with the loc.
- c. desire, to indicate the goal or object aimed at: grah be eager, yat strive, ä-sams hope; e.g. annesu jägrdhur they are eager for food (ii. 2311); divi svanó yatate the sound soars to heaven (x. 7511); à tú na indra samsaya gósv ásvesu pray give us hope, Indra, of cous and horses (i. 2911); agnihotrini devátă à samsante the gods place their hope in the maintainer of the sacrificial stre (MS.).
- 2. The loc. is also used to some extent connected with nouns:
- a. verbal nouns (substantives and adjectives) derived from verbs taking that case; e. g. ná tásya väey ápi bhagó asti he has no share in speech (x. 71°); sómo bhūtv avapāneşv ābhagah let Soma be a participator in drinking bouts (i. 136°); sutá it tvám nimišla indra sóme thou art attacket, O Indra.

to the pressed Soma (vi. 28'); tásminn evá otá nímiálatamá iva to him these (women) are most devoted (SB.).

b ordinary adjectives: in V. priyá and cáru dear; e.g. priyáh súrye priyó agná bhaváti he will be dear to Sárya, dear to Agni (v. 37°); cárur mitré várune ca dear to Mitru and Varuna (ix 61°); in B. dhruvá firm; e.g. rástrám evá asmín dhruvám akah he has made the sovereigniy established in him (TS.).

3. The loc. is used with a few prepositions: in V. à in, at, on, and (rarely) àpi near, in, and upa near to, at, upon, as well as the prepositional adverb sácă beside, with; in V. and B. ádhi on and antár within (op. 176, 2; 177, 5).

Locative and Genitive Absolute.

- 205. 1. The absolute construction of the loc, in which the case is always accompanied by a participle, started from the ordinary use of the loc. Combined with a participle it came to be regarded as a temporal or qualifying clause where the case alone could not be employed. Thus beside usast at daten could appear uchantyam usast at daten as it shines forth, which then acquired the independent sense when dawn shines forth (i. 184'). As regards the participles used in this construction, the future never occurs; the perfact, is quite isolated; the perf. pass. part, is somewhat doubtful in V., but undoubted in B.; while the pres. part, is in fully developed use in V. as well as B.
- a: An example of the perf. part, act. in vant used absolutely is: asitavaty attithav asniyat (AV, ix 6³²) the guest having eaten, he may cut (cp. 161).
- b. The perf. part. pass. appears in the RV. in several expressions, such as jaté agnau, stirné barhisi, suté some, in which the loc. probably still has its ordinary sense; e.g. viśvam adhāg āyudham iddhé agnau he burni every weapon in the kindled fire (ii. 15); yô áśvasya dadhikrūvņo ákārīt

samiddhe agnā uṣāso vyūṣṭau who has honoured the steed Dadhikrīwan beside the kindled fire at the flush of Dawn (iv. 89°), possibly when the fire is kindled. In other examples the absolute sense seems more likely: yād im enām ušató abhy āvarsīt tṛṣyāvataḥ prāvṛṣy āgatāyām when it has ruined upon the eager thirsty ones, the rainy season having come (vii. 103°); especially in yān marutaḥ sūrya ūdite mādatha when ye, O Maruts, are exhibarated at the rising of the sun (v. 54°). Here sūrye could not be used alone, while the loc, of time would be expressed by ūditā sūryasya at sunrise.

- n. In B. the absolute use with the perf. part pass is much more pronounced; e.g. fiditequ nabsatregu vacam vi erjati when the store taxe rises he see fire his voice (TS.); sa enab avo bhuté vajate he savrides to their then the voice (TS.); krité some maitravaruphy a daudhin pra yachati when the Some has been bought he hands the staff to the Maitritravana priest (TS.); taxmad gardabhé pura ayusah pramite bibbyati therefor me is frightened when a dunley has died before its time (TS.). The substantive has sometimes to be supplied; e.g. sa hoving: hate vetré; yad dhaté kuryata tax kurute, its he said; Frim is dead; what you would do, if he were dead, that do (SR.).
- c. Of the pres. part, with the loc. in the absolute sense there are many examples in V.; e.g. indram pratar havamaha indram prayati adhvaré Indra we invoke early, Indra when the sacrifice proceeds (i. 163); sarasvatim devayanto havante sarasvatim adhvaré tayamane men devoted to the gods invoke Sarasvati, Sarasvati while the sacrifice is extended (x. 173); ta vam adya tav aparam huvema uchantyam usasi so you two to-day, so you two in future we would invoke when Dawn shines forth (i. 1844).
- a. Similarly in B: yajñamukhé-yajñamukhe vát kriyámáne yajnám ráksátnat jighámuanti almose mácn the commencement of the acceifeste being made, the Raksases sock in destroy the sucrifice (TS.); adme hanyámáne yajúó hanyate when Soma is destroyed, the sacrifice is destroyed (TS.);

Because the sense rejoice is the sen would be unnatural, though the construction of mad with the loc. is normal (cp. 204, 1 a).

tammad agnicid varsats na dhavet therefore the fire-piler should not run others (TS.); tam stat pratyayatyām rātrau sayam üpātisthanta so they approached him in the ecoulny when night convined (SB.).

2. The genitive absolute is unknown in V., but has already come into use in B. It arose from the possessive genitive which acquired an independent syntactical value when accompanied by a (pres. or perf. pass.) participle much in the same way as the loc. The substantive is sometimes omitted. Examples are: tasya alabdhasya sa vag apa cakrama he being sacrificed, this voice departed (SB.): tasmad apam taptanam phono jayate therefore, when water is heated, foam arises (SB.): sa eta vipruso 'janayata ya imah skuyamanasya vipravanto he (Agni) produced those sparks which dart about when (the fire) is stirred (MS.): tosam ha uttisthatam uvaca while these stood up he said (AB.). In the first three of the above examples the close relationship of the absolute to the possessive case is still apparent.

Participles.

206. Participles are of a twofold nature insemuch as they share the characteristics of both noun and verb. In form they are adjectives both in inflexion and concord. On the other hand they not only govern cases like the verb, but also indicate differences of voice and generally speaking retain the distinctions of time expressed by the tenses to which they belong. They are as a rule used appositionally with substantives, qualifying the main action and equivalent to subordinate clauses. They may thus express a relative, temporal, causal, concessive, final, or hypothetical sense. The verbal character of participles formed directly from the root (and not from tense stems) is restricted (with certain exceptions) to the passive voice in sense, and to past and future time; while owing to their passive nature they are not construed with an acc, of the object, but only with the inst. of the agent or means:

- 207. The pres. part. is occasionally used in V. by unacoluthon as a finite verb; e.g. asmad aham tavisad isamana indrad bhiya maruto réjamanah I (am) ficeing from this mighty one, trembling with fear of Indra, ye Maruts (i. 1714). This use does not seem to be found in B.
- a. The pres, part, is used with the verbs i go, car move, as remain, stha stand as auxiliaries to express continued duration in V. and B.; e.g. viśvam anyó abhicákṣāṇa eti the other (Pūṣan) goes on watching the universe (ii. 40°); vicākaśzc candrámā nāktam eti the moon goes on shining brightly at night (i. 24°); tò 'sya gṛhāḥ paśáva upamūryámāṇa īyuḥ his house and cattle would go on being destroyed (ŚB.); tváṃ hi... éko vṛtrā cárasi jighnamānaḥ for thou alone goest on killing the Vṛtras (iii. 30°); tò 'reantaḥ śrāmyantaś ceruḥ they went on praying and fasting (ŚB.); reāṃ tvaḥ póṣam āste pupuṣvān the one keeps producing abundance af verses (x. 71°); sōmam evā, etāt pībanta āsato they thus keep on drinking Soma (TS.); ucchvāñcamānā pṛthivī sū tīṣṭhatu let the earth keep on yauening wide (x. 18°); vitṛṃhāṇās tiṣṭhanti they keep conflicting (TS.).
- 208. The past passive participle in the is very frequently used as a finite verb; e.g. tatám me ápas tád u táyate púnah my work is done and it is being done again (i. 1101); ná tväväm indra kás caná ná játó ná janisyate no one is like thee, O Indra, he has not been born, and he will not be born (i.S15); used impersonally: śráddhitam te mahatá indriváya confidence has been placed in thy great might (i. 1046).

Similarly in B.: istå devåtå åthe kutemå eté he gote han been ourshipped, but which are these gods? (TS.); also in subordinate clauses; tåsmin yåd åpannam, geneitäm evä, asya tåt what has got into him, that has been dereured by him (TS.).

a. The perf. pass, part, is not infrequently used with forms of as and bhū as auxiliaries constituting a periphrastic mood or tense in V.; a.g. yuktás te astu dáksinah let thy right (steed) he yoked (i. S23); dhūmás te ketür abhavad divi śritáh the smoké, thy banner, (was raised=) urose to heaven (v. 112).

- b. Such forms (pres. and sor, ind. of bhû, impf. and perf. ind. and opt. of as) make regular past and present tenses and the opt. mood in B.; e.g. bhûyasîbhir ha asya āhutibhir iştam bhavati by him sacrifice has been made with several offerings (AB.); devāsurāh samyattā āsan the gods and Asuras were engaged in conflict (TS.); tād vā fṣīṇām ānu-śrntam āsa that was heard by the seers (SB.); tāsmād vidhṛtā ādhvāno 'bhūvan therefore the roads have been divided (TS.).
- 209. Future Participles Passive. There are six of these: one, that in ayya occurs in the RV, only; three, these in enya, ya, and tva, in V, and in B.; two, those in tayya and aniya in V, (but not in the RV,) and in B. The commonest sense expressed by these verbal nouns is necessity; but various allied meanings, such as obligation, fitness, certain futurity, and possibility, are also frequent. Four of them are construed with the inst. of the agent (the gen, and dat, sometimes appearing instead), while the forms in tva and aniya are never found connected with a case.
- 1. The commonest of these gerundives is that in ya; sadyó jajňänó hávyo babhůva as soon as born he became one to be invoked (viii. 9621). It often appears without a verb; e.g. viśvä hi vo namasyāni vándyā nāmāni devā utá yajñíyāni vah all your names, ye yods, are adorable, worthy of praise, and worshipful (x. 632). The agent may be expressed by the inst., dat., or gen.; e.g. tvám nfbhír hávyo višvádhā asi thou art always to be invoked by men (vii. 227); asmābhir û nû praticáksyā abhût she has become visible (by=) to us (i. 11311); sákhā sákhibhya idyah a friend to be praised by friends (i. 754); yá čku id dhávyah carganinām who alone is to be invoked of men (vi. 221).

s. In B, the agent may be in the inst or gen., but not in the dat.; thus themal deyant means is him offic should be given (SR.). This example also illustrates the impersonal use of this gerundice in B.

a use unknown to the RV. This gerundive is always without a verb, being unaccompanied by forms of as or bhû in B.; e.g. bahû dêyam much (is) is be given (MS.).

- 2. The gerundive in tva in the RV. implies necessity or possibility and is often used in contrast with the past; but it is not found accompanied by a verb (as or bhū) or a noun expressing the agent; e.g. ripávo hántvāsah the enemy are to be killed (iii. 80th); yó nántvāny ánaman ny ójasā who by his might bent what could be bent (ii. 24th); tád vísvam abhibhūr asi yāj jātám yác ca jántvam thou surpassest all that has been born and that is to be born (viii. 89th).
- s. The only meaning that seems to be expressed by this gerundive in B. is possibility; e.g. anatvam udakém water that are is bethet in (SB.); no says, anyéd dhotvam sait prans and he had nothing she that sould be given but treath (MS.).
- 3. The gerundive in ayya, found in the RV, only, sometimes appears accompanied by an agent in the inst. or the dat.; e.g. dakṣāyyo nɨbhiḥ to be propitiated by men (i. 1292); dakṣāyyo dasvato dama ā who is to be propitiated by the pious man in his house (ii. 42).
- 4. The form in enya, almost restricted to the RV.. may be accompanied by an agent in the inst.; e.g. agnir ilényo gira Agni to be praised with song (i. 70°); abhyāyamsönyā bhavatam manīgibhih be willing to be druwn near by the devout (i. 84°).
- a. It is once of twice also found in B. ; thus vacam udyasum autensanyam I would after a speech worthy to be hand (TS.).
- The gerundive in tavya, which is not found in the RV. at all, occurs only twice in the AV.; thus na brahmano himsitavyah a Brahmin is not to be injured (AV. v. 180).
- a. In it it is frequent and used much in the same way as the form in ya; here it is also used impersonally and with the agent in the inst; e.g. pured yajayayitayah a son must be made to carrifus (MS.); aguleità paksino na akitayyam on spacif should not set (any puri) of a tool (MS.) pakuvratena bhavitayyam (MS.) he should not after the manner of

cattle (more literally; action should be taken by him as one following the number of cattle).

6. The form in aniva, which is rare in both V. and B., does not occur at all in the RV., and only twice in the prose of the AV. Expressing only suitability or possibility, and never used either with an inst. or impersonally, it has hardly attained the full value of a gerundive even in B.; e. g. upajivaniyo bhavati he is one who may be subsisted on (AV.); abhicaraniya liable to be bewitched (SB.); ahavaniya suitable to be offered to (AB.).

Gerund or Indeclinable Participle.

210. The forms of the gerund, ending in tvī, tvā, tvāya (ep. 163) and in ya or tya (164) are synonymous, expressing an action that is past before that of the finite verb begins. It regularly refers to what is regarded as the subject of the sentence; e.g. gūḍhvī támo jyōtiṣā uṣā abodhi having hidden away the darkness, Dawn has awakened with light (vii. 80°); yuktvā hāribhyām ūpa yāsad arvāk having yaked (them) may he come hither with his two bays (v. 40°); strīyam dṛṣṭvāya kitavām tatāpa having seen a woman it pains the gambler (x. 34°) = the gambler, having seen a woman, is pained; pībā niṣādya drink, after having sal down (i. 177°); yō hānti šātrum abhītya who slays the foe after having attacked him (ix. 55°).

a. The usage in B. is similar; e.g., tasmat suptvå prajah pra budhyante therefore considers suche after having stept (TS.); tan ha many
dretvå bhir viveda having see him four musel him - having seen him he
becaus afraid (SB.). The gerund is, however, here found loosely construed in various ways not occurring in V. Thus it refors in some to
the agent implied by the future part, pass, in tavya or ya used predicatively as a finite verb; e.g. agnihotrahavanim pratapya histo
'cadhéyah his hand (is) to be put into it (by the holder) after having histo
'cadhéyah his hand (is). Still locaer is the connexion in such senteners as the following; té passiva ésadhir jagdhya apah pitvá tata
esa rásah sam bhavati the beside having saim the planta and dreak-notes—

thus this vital sap arises (\$B,) = then acquire that estal sap. The past sense of the genund is aften emphasized by the particle 4tha then being placed immediately after it. The genund is here sometimes equivalent to the finite verb of a subordinate clause; e.g. 4tithyéna vái devá lytrá tánt samád avindat after the gods had sacrifeed seith the vits of hospitable reception, discord came upon them (\$B.); similarly with the verb man think I etád vái deváh prápya ráddhvá, iva, amanyanta the gods, hattieg aktained this, thought that they had as good as um (\$B.).

- b. The gerund in am, which is always a compound, and the first member of which is nearly always a preposition, expresses a simultaneous action performed by the subject of the finite verb of the sentence. Being a cognate acc. used adverbially it is only beginning to be used as a gerund in late V.; e.g. tantrám yuvati abhyākrāmam vayatah the two maidens weave the web while going up to it (AV.).
- u. In B. it has become common; e.g. abhitramam juhoti TS.) be sucrifices while approaching (the fire). This gerund is sometimes used with as, 1, or car to express continued action; e.g. to parapatam heats they isp! Sping every (MS.).

Infinitive.

211. The normal use of this form is to supplement the general statement of the sentence in a final (in order to) or a consequential (so as to) sense. The infinitive is, however, sometimes dependent on a particular word in the sentence, usually a verb, occasionally a noun: it then loses some of its full meaning, as in other languages after an auxiliary. The object when it is expressed is generally in the accusative.

1. Dative Infinitive.

a. The various forms of this infinitive govern either an acc. or (by attraction) a dat., sometimes (according to the nature of the verb) another case; e.g. indraya_arkam juhvà sam aŭje, viram dänaukasam vandadhyai for Indra I with my tongue adorn a song, to praise the bountiful hero (i. 61°); tvam akrnor dustaritu saho visvasmai sahase sahadhyai thou didst display irresistible power to overcome.

acery power (vi. 11); áva sya átira, ádhvano ná ánte 'smín no adyá sávane mandádhyai unvoke, O hero, as at the end of a journey, to delight in this our Soma pressing to-day (iv. 161); abhūd u pārām étave panthā the path has appeared, to (enable us to) go to the further shore (i. 4611); a no nava matīnām yātām pārāya gantave do ye two come to us with the boat of our hymns, to go to the further shore (i. 467); indram codaya datave magham urge Indra to give bounty (ix. 75°); indram avardhayann áhaye hántavá u they strengthened Indra to slay the drayon (v. 311); a ta otu manah punah jiváse jyók ca súryam dráč let thy spirit return (to live =) that thou mayest lice and long see the sun (x. 571); siste spage raksase vinikge he sharpens his horns in order to pierce the demon (v. 2); sadyes ein maht davane to give much al once (viii. 4625); prá yád bháradhve suvitáya daváne when we proceed to give welfare (v. 599); amitran prisu turvano lo overcome foes in battle (vi. 46"); atha upa pra aid yudhaye dasyum then he advanced to fight the demon (v. 30°); tav asmábhyam dršáye súryaya púnar datam asum may these two give us back our breath that we may see the sun (x. 1412); devo no átra savita nú ártham prasavid dvipat prå cåtuspad ityåi here god Savite has now urged on our bipeds, on our quadrupeds to go to their work (i, 1241); abodhi hóta yajátháya deván the priest has awakened to worship the gods (v. 11).

b. The dat, inf. not infrequently depends on a particular word in the sentence; e.g. tā vām vāstūni, ušmasi gāmadhyai we desire to go to those abodes of you two (i. 154°); dādhṛvir bhāradhyai strong to carry (vi. 66°); cikid nāšayādhyai understanding to destroy (viii. 971°); ugnīm dvēso yōtavāi no gṛṇīmasi un implore Agni to ward off hostility from us (viii. 711°); tē hi putrāso āditer vidur dvēsāṃsi yōtave for those some of Aditi know how to ward off hostilities (viii. 18°); tvām indra sravitavā apās kah thou, O Indra, hast made the waters to flow (vii. 21°); vidyāma tāsya to

vayám áküpärasya däváne may ve know this of thre who art inexhaustible to give (v. 39°); bhiyáse mrgám kah he has made the monster to fear (v. 29°); jajanúś ca rájáse and they created (him) to rule (viii. 97°°); kavimr ichāmi saṃdýśe I wish to see the poets (iii. 38°).

a. The dat, inf. has sometimes a passive force; e.g. & vo vähisthe valuatu stavédhyai ráthah may your soud soull car bring you hither to be praised (vil. \$77); girbhih sakháyam gám ná doháse huve with rospe I cail my friend like a can to be sailed (vi. 457); esā purutámā dráé kám aks bere that comfanily returne (so as) to be seen (i. 124°). This some is sepacially noticeable in the infinitives in tavál, tave, and o, which when used predicatively (as a rule with the negative ah) are equivalent to a future part, passi with the copula; e.g. sturé să vâm râtih shallounty of yours is to be praised (i. 123°); náisá gávyútir apabhartavá a this pasture (ia) and to be taken mony (z. 14°); yáxya ná rádhah páryetave mone treasure is nos to be zarpused (viil. 24°); ná nasnázam sati tát tára ádityáso atiakáde this our nest, O Adityas, is not to be overlokéed (viil. 67°); ná pramiyo savitúr dátvyaxya tát táta (work) of the divine sourt (ia) indestructible (iv. 54°).

8. The agent (or instrument) of the action expressed by the inf. is put in the last or gen, when there is a possive sense; e.g. na, anyone stome vasisthe invetave val your landation, o Vasishas, is not to be equalled by mather vii, 33°; abbeid again samidhe manusanam Agai has appeared to be kindled of men (vii, 77°). When there is no possive sense the agent is expressed by the dat.; e.g. vi śrayantam przyńi davebbyo mathib may the grant (pales) open (for the gode to =) that the pode may eithe i, 142°); dabhran pásyadbya urviya violkya usa ajigar bhūvanani višva (i, 113°) Daum has seckened all eventures (for those who now see little to =) that these who see little now may look far and wide; abam rodrāya dhānur a tanomi brahmadvige štrave hantavā u Partick mu tous for hudra (for the arrow to =) that the orrow may strike the holes of prayer (x, 125°).

γ. The infinitive in dhysi is not infrequently employed elliptically to express an intention, the subject being either expressed or requiring to be supplied in the first or third person³; e.g. práti văm rátham.

In Latin the germulive actually appears to have taken the piace of the IE. predicative infinitive: see Brugmann, Grandrin, 4, 2, pp. 461 and 488.

^{*} Which in Latin would be : landanda (ed) serve benigntias,

The int is similarly used in Grook in the sense of a 2, pers. Impv.; a.g. rarra rad dypolan post yerdayelor even tell all this and be not a false ressurger (Hamer, Od.); elaspeens per, Tpoet tell me, ye Trayons (1916.);

jarādhyai its churiat of you into (I purpose) to timble (vil. 671); å va aukijo huvidhyal idmsam the son of Uti) (intends) to produke your peake (i. 1224).

3. In B, the inf. In tavdi has three uses: I, with a final sense; e.g. tam pre haruli yo sya striyes tasmal startaval he harb if is order to strike down him who is to be struck down by if (AB.). 2. predicatively with no, often with a passive sense, sometimes impersonally; e.g. no vai yajās ira mantavāi it is not to be required like a sacrides (SB.); no purā sārryaxya ūdotor manthitavāi one should not red jire hojars saurim (MS.); tāsmād eténa, āšru na hártavāi (herefur tears them)it not be shot by him (MS.). 3. with a passe sense after un one governed by aba, when and trenya; e.g. agnim pārimarītavā āha he saus that the research of the miles (MS.); gopālān sāmhvayitavā uvāca he said that the research should be miled together (SB.); tād asvām ānetavāi brīvyāt then he should order the horse to be brought (SB.). Parhaps, however, the acc, here depends on the inf. alone; he should give orders to being the horse.

2. Accusative Infinitive.

a. The form in am is used to supplement statements containing a verb of going or in dependence on verbs meaning be able (arh, as, šak), wish (vas), or know (vid); e.g. upo emi cikituso vipfeham I go to the wise to inquire (vii. 863); iyotha barhir āsādam thou hast gone to seat thyself on the straw (iv. 93); šakēma tvā samīdham we would be able to kindle thee (i. 943); sā veda devā ānāmam devān he, the god. knows (how) to guide hither the gods (iv. 83).

s: In B. this form of the inf. appears only in dependance on the verbs arb, vid, and sak when they are combined with the negative na; e.g. svarundham na, asaknot be seen not able to keep back (MS.).

b. The inf. in tum in the RV. expresses the purpose with verbs of motion ind also appears in dependence on the verbs arh be able and ci intend; e.g. kó vidvámsam úpa gát prástum etát who has gone to the wise man to ask him this? (i. 164); bhúyo vá dátum arhasi or thou canst give more (v. 7910).

¹ The use of this inf. is restricted to dependence on such verbs in the Latin supine in tum.

a. In B. the use is similar, this inf. expressing the purpose with verbs of motion, or in dependence on the verbs dhr intend and (generally accompanied by the negative nú) arh and šak be able, kam desire, dhes dare, a-de trouble, a-sams expect; e.g. hótum eti he goes to sacrifice (TS.), drástum a gachati he comes in order to see (SB.); anyad eva kartum dadhrire 'nysd vai kurvanti they have purposed to do one thing, but do another (SB.); katham asakata mad ris jivitum how have you been able to live without me? (SB.); ná cakame hántum he did not wish to kill (SB.).

3. Ablative-Genitive Infinitive.

a. The form in as (which is always compounded with prepositions) is almost exclusively abl. as is shown by its being used with words governing that case, viz the prepositions rté without, pura before, and the verbs pa protect, tra rescue, bhī fear; e.g. rte oid abhisrisah pura jatrubhya atfauh willout binding, before the cartilages being pierced (viii. 119); tradhvam kartad avapadah (ii. 290) sure us from falling into the pit (lit. from the pit, from falling down).

There is one example of its being a gen., as it is governed by the verb is: nahi tvád aré nimisas cana, ise for without thre I um not able even to blink (ii, 28%).

o. In B. it appears only as a gen. governed by isvara; e. g. sa isvaro yajamanasya pasun nirdahah he is able to hurn the coulds of the eacrifices MSA.

h. The form in tos is abl. when it is governed by the prepositions purå before and å till or by verbs of saving and preventing; e.g. purå hantor bhayamano vy ara fearing he withdrew, before being struck (iii. 3010); ynyota no anapatyani gantoh sacs us from coming to childlessness (iii. 54 9).

The gen, form is found only in dependence on the verb is be able (with the object by attraction in the gen.) or on the adverb madhyå in the midst of; e.g. ise rayah suviryasya datoh he can give wealth and heroic offspring (vii. 40); 1812

må no madhyå ririsata åyur gantoh injure us not (in the midst of =) before our reaching old age (i. 89).

a. In B. the abl. inf. is found with prepositional words only. It usually occurs with a till and pura before, both the subject and the object being in the gen. The object may, however, by attraction be in the abl., and a predicate is in the abl.; e.g. a suryaxya udetch (MS.) till the sun's rising - till the men class; a tisrcam degdhoh (SB.) till the sunking of tione (cown) - till three (cown) are sulfied; a medhyad bhaviroh till becoming pure; pura suryaxya, udetch before the sun's sining (MS.) - before the sun's rising (MS.) - before the sun's rising tisrcam attering (PB.) - before the suices are uttered. The abl. form is also sometimes used with the prepositional advertes purasthet and arracefram before; e.g. purasthet dihotoh before sucrificing (MS.); arvacinum janitoh before being born (MS.).

The gen, form occurs only in dependence on lavara able, the object being in the acc. (sometimes by attraction in the gen.), and the proficate in the norm; e.g. of invari action from he can full buts min'ortune (TS.); the invaria yajamanam himaiton these was con supere the nurificer (MS.). Occasionally invara is omitted; e.g. thto difficult pamano

bhavitch kence the initiated mun (can) become scotby (SB.).

4. Locative Infinitive.

The only loc. forms to which a genuine inf. use (cp. 167, 4) can be attributed are the few in sani. These supplement the general statement of the sentence or depend on a particular word in it, and (like the form in dhyai) express an intention or exhortation (with the ellipse of a verb in the 1., 2., or 8. pers.); e.g. ví nah patháś citana vástave, asmábhyam visvā āsās tarīsani do ye open up for us the paths to sacrifice, (for us to =) that we may conquer all regions (iv. 377); náyistha u no nesáni, pársistha a nah parsány ati dvisah the best guides to guide us, the best leaders to lead us through our foes (x. 1267): tád va ukthásya barhána indraya upastrnīsani this song of praise (I will) spread out with power for your Indra (vi. 419); priyam vo atithim grnīsani (do ve) extol your dear quest (vi. 15"); ījānām bhumir abhi prabhūsani (let) Earth assist the sucrificer (x. 182).

TENSES AND MOODS.

- 212. Two or more roots of cognate meaning sometimes supplement each other in such a way as to be used for different tenses of what is practically one verb. Such are:
- 1. as and bhū be: the pres., impf., and perf. are formed by as; the fut. and nor. by bhū alone. In its proper sense bhū means to become (originally to grow), but unless opposed to as be, it has the same sense as the latter, the pres. and perf. of both being used promiseuously. The contrast appears clearly when the pres. is opposed to the nor.; e.g. yamó vá idám abhūd yád vayám smáh Yama has become that which we are (TS.). It also appears in the impf.: yá vipruṣā āsaṃs tāḥ śārkarā abhavan what were sparks became gravel (MS.).
- dhav and sr run: in the RV. occur the plup. adadhavat and the pres. sisarti; in B. the pres. dhavati, the impf. asarat, and the perf. sasara.
- pas and drs see: the former appears in the pres. only, the latter in the acr., fut., and perf. only; khyā see is used in the same tenses as drs, but as opposed to the latter means discern.
- brū and vac speak: the former is used in the pres. stem only; the latter in the nor., fut., perf. (V. has also the pres. vivakti).
- 5. han and wadh slay; the former has the pres., impf., fut., perf. only, the latter the sor. only.
- n. In B. a few additional pairs of roots supplement such other to some extent. Such are ad and ghas cot; aj and vi dries; i and ga (nor.) go; pra-yam and pra-dā porent; sad and sī fall.

Present.

A. In V. a number of verbs form two or more present stems, in which, however, no differences of meaning are traceable. In B. this multiplicity is for the most part lost. The only type here showing any development is that in ya, which tends to have an intransitive sense. Such present stems are formed in B. from more than a dozen roots that do not form it in the RV.; e.g. tapyati grows hot (RV. tapati).

- 1. As in other languages, the present is used to indicate an action that is taking place when the speaker makes his statement.
- 2. In the RV, the simple pres, is sometimes employed of past actions in narration to add a new statement in a vivid manner; e.g. purutra vetro asayad vyastah: amuya sayanam ati yanti apah Vetra lay scattered in many places; over him as he thus lies the waters flow (i. 327).

This use does not seem to occur in B.

- a. purå formerly is used with the press to indicate an action which has extended through the post down to the present; e.g. kvå the nau sakhyå babhūvuh, sácāvahe yād avrkām purå cit where has that friendship of us two yone, inasmuch as we have hitherto associated inoffensively (vii. 88°); så ha agnir uvāca átha yān mām purå prathamām yājatha kvā ahām bhavāmi iti so Agni said: now that you have hitherto hamoured me at the sacrifice as the first where shall I be? (SB.).
- s. In B. purå is also used without reference to the actual present from the speaker's point of view, to express a previous stage in typical conditions; s.g. shots vá esa purå bhavati yadá evá enam pravenité tha hóts he is previously a new-Hot; as soon as he chooses him, then he is a Hot; (SB.); shaddha tva vh asya atah purå janam bhavati previously his origin is as it were unartain (SB.).
- b. sma purå with the pres. ind. expresses that something used to happen in the past; e.g. samhotrám sma purå nåri samanam vå åva gachati formerly the soman used to go down to the common sacrifice or the assembly (x. 8610).
- s. The same mage is common in B with he sma purk; e.g. né he sms vát purk aguir áparasuvrknam delimit formerly Agui med not to burn what sees not not not not to the purk to

much more usually emitted, he same abone expressing the same sense, especially often with the press perf. ahs; e.g. ctád dhe ame vá aha náradáh (MS.) with regret to this Nárada wad to my. (The AB, uses the perf. and the impt, with he same in the same sense.) The particles he ame, which originally only accompanied it, have thus acquired, when used alone, the sense which is inherent in perf only.

a. The pres. ind. is also sometimes used for the fut. or the subj.; e.g. aham api hanmi_iti ha_uvaca he said: I too will slay him (SB.); indras ca rusamas ca amsam prasyetam: yataro nau purvo bhumim paryeti sa jayati_iti Indra and Rusama proposed a wager: whichever of us shall go round the earth first shall win (PB.).

Past Tenses.

213. Each of the past tenses (except the pluperfect) has a distinctive meaning of its own, though occasional examples of acr. and perf. forms occur that are almost indistinguishable in sense from the impf.

A. The perfect characteristically expresses the condition attained by the subject as the result of a preceding action. If that action (often a repeated or continuous one) is continued into the present so as to include the latter, it may be translated by the present; if it is regarded as concluded before the present, by the present perfect. It can express both these senses when accompanied by the adverbs pura formerly and nunam now; e.g. pura nunam ca stutáya rsinam pasprdhre the praises of the seers have vied together in past times and (do so) now (vi. 341); śáśvad dhi va ūtíbhir vayám purå nůnám bubhujmáhe we have constantly enjoyed your aids and (do so) now (viii. 674); the same sense appears with the adverb satra always; e.g. tabhyam brahmani girs indra tubhyam satra dadhire: jugasva to thee prayers, O Indra, to thee songs have always been offered (and still are): accept them kindly (iii. 510). But even without a particle this double sense is not infrequently apparent;

nă sôma îndram ásuto mamada (vii. 26') unpressed Somu has not (în îho past) intoxicated Indru (and does not now): nă bhojă mamrur nă nyartham îyur: nă risyanti nă vyathante ha bhojăh the liberal have not died (and die not), they have not fallen into culumity (and do not now): the liberal are not injured and waver not (x. 107"); indra... ubhé à papran rôdasī mahitvă Indra has with his greatness filled (and still fills) the two worlds (iii. 541a).

a. Thus a number of perfects (since their action includes the present) can be translated by the present, as is indicated by their often occurring by the side of actual present forms. Such perfects are formed from verbs meaning to know: be pleased, sad, or afraid; stand, sit, lie; rest upon, hold fast; have, possess; encompass; surpass; prosper; become; shore aneself; e.g. kvå idånim såryah; káš ciketa where is non the sun : who knows ! (i. 857); yan na indro jujūso yao ca vasti what Indra likes from us and what he desires (iv. 221); kā īsate, tujyāte, ko bibhāya who flees (and) speeds, who is afraid 1 (i. 8417); ná methete ná tasthatuh they (night and morning) clash not and stand not still (i. 1133); vane-vane šišriye takvavir iva on every tree he sits like a bird (x. 912); yatha iyam prthivi mahi dadhara iman vanaspatin eva dadhara to manah as this great earth holds these trees, so he holds thy spirit (x. 60°); ná te půrve ná, áparáso ná víryám nútanah kás caná apa not carlier men, not future men, no mun of the present (has attained =) equals thy heroism (v. 420); prá hí ríriksa ójasa divő ántebhyas pári, ná tva vivyāca raja indra parthivam thou extendest beyond the ends of housen with thy might, the terrestrial space does not contain thec (viii. 884); indrens śuśuve nfbhir yas te sunoti Urrough Indra he who presses (Soma) for thee prospers in men (vii. 32%); sed u rajā ksayati carsaņīnām, arān ná nemih pári tā babhuva he rules as king over men, he encomposses the worlds (ta) as the felly the spokes (i. 3211); bhadra dadrksa urviya vi bhāsi, út te śocir bhānavo dyam apaptan brilliant

thou appearest, thou shinest afar, thy light, thy beams, have shot up to heaven (vi. 642).

- b. Other perfects, which sum up past action but exclude the present, may be translated by the present perfect; e.g. yat sim agas cakema tat su melatu whatever sin we have committed, let him forgive that (i. 1797); ya vetraha paravati sana nava ca cucyuvé, ta samsatsu pra vocata what old and new deeds the Vetra-slayer has set yoing in the distance, those proclaim in the assemblies (viii. 4521); uvasa usa uchac ca nu Dawn has flushed (in the past) and she shall flush now (i. 483); kim aga asa varuna jyéstham, yat stotáram jighāmsasi sakhāyam what has that chief sin been (in my past life) that thou desirest to slay the praiser, thy friend? (viii. 861); iyūş te ye purvataram apasyan vyuchantīm usasam martyasah; o [=au] te yanti ye aparīsu pasyan those mortals have yone who saw flushing the varlier dawn; those are coming who shall see her in the future (i. 11311).
- c. The perf. often expresses a single action that has been completed in the recent past, when it can be translated by the pres. perf.; e.g. å no yātam divás pári: putráh kānvasya vām ihā suṣāva somyām mādhu come to us from heaven: the som of Kanva has here pressed for you the Soma mead (viii. 84). This use of the perf. comes very near that of the aor. The distinction seems to be this: in the above passage the perfect means come because the Soma has been pressed, i.e. is ready for you; the aor, would mean come because of the fact that the Soma has just been pressed for you.
- d. The perf. is not infrequently used of a single action in the remoter past, when it cannot be translated by the perf. pres. It occurs thus beside the impf. of narration, when the story is interrupted by a reflexion which often expresses the result of the action previously related. Thus in the story of the Vrtra fight the poet says: ájayo gá ájayah áura sómam; áväsrjah sártave saptá síndhún thou didst win the kine, thou didst win the Somu, O hero, thou didst let

loose the seven streams to flow (i. 82"); he then adds indress on yad yuyudhate shis on uta paribhyo maghava vi ligye when Indra and the surpent fought, the bounteous god conquered (= remained conqueror) for the future. This use of the perf. is hardly distinguishable from the impf.

a; In B: the part and appears in three different uses :

I, in a present sense based on the pres, perf., chiefly in forms that have a strengthened reduplicative vowel and thus seem to have an intensive meaning. It is the pres, perf. that includes the present, expressing that an action takes place in the present as a result of its repetition in the past; e.g. dadhara (he has committe held and use) holds; e.g. yat sayan jubbit rarryst time dadhara if he effects in the cerning, he thereby holds (April) for the night (MS.). Other perfects of this hind are didays stones; upo dodrava ruches at; yoyara wards of; lalays quiers; bibhaya (beside bibhaya) fours (while the periphrantic bibhayan cakara has always a preterite sense). Besides these verter yeds assess and aha says always have a present sense.

Several other perfects with ordinary reduplication often have the present sense; anase (her obtained =) has (MS, TS.); perlyaya (has required =) possesses (TS.); babhava (has become =) is (MS.); vivyā is (has recompsised =) container; dadrās (has been seen =) appears (while dadārās always has a past sense); also the perfect of grah, and pre-ap; yé hi pasavo lôma jagrinis tā medham prāpuh (he mille which hase hase hase also jai (MS.).

2. In a proterite sense, expressing that an action once occurred in this past (but not in the narrative sense of the impf.). This use must often appears in the form uvaca, which may be translated by once unit or has mid; o.g. oténa vá úpakorů rarádha : rdhnótí yá eténa value by this sacrifice Upakera once prospered; he seke excritions with a propers (MS.). It often occurs in the AB, at the conclusion of a story related in the impf., in the phrase tad etad rain pasyance abhyannvice seeing this a over him attered with reference to it (the following verse). A somewhat different connexion with the narrative impf. appears in the following example : etim ha vál yajhásonas citim vidám cakára : taya val as pasan svarunddha this method of piling l'affiasena ones incontrol by means of it he exquired cuttle (TS.). This perfect is found contrasting what is past with the present and future in the following successive multi-ness; yad vå asyam kim oaroanti yad anreur; yad evá kim ca vách ánredr vád átó dhi arcitárah mánires proper theo after an id this earth or have aftered ; schuleger propers they have aftered with the rates or will ofter in future (TS.).

3, in an historical sense, equivalent to that of the impf. in narrative,

in cortain parts of the AB. (vi-viii) and the SB. (i-v) xi, xii, xiv, while the impf. is used alsowhere in B. (MS., TS., K., TB., PB., AR. i-v; SB. vi-x, xiii). Thus in the former unless said and devise on asuras on paspedhire the pole and the distrast sear in condict, in the latter abravit and aspardhants would be used. There are, of course, exceptions in both groups.

B. The imperfect is the past tense of narration, never having any relation to the present as the perf, and the nor, have; e.g. ahann ahim... pra vakṣāṇā abhinat pārvatānām he slew the serpent; he pierced the bellies of the mountains (i. 32); ná vái tvám tád akaror yád ahám abravam you did not do what I soid (SB.). The impf. has also to do duty for the pluperfect, as in the relative clause of the preceding example, which is equivalent to what I had told you.

C. The agrist ind, expresses that an action has occurred in the past with reference to the present. It neither describes nor indicates duration, but simply states a fact. It may nearly always be translated by the English present perfect.

The nor, usually expresses the immediate past; v.g. práti divô adarši duhitů the daughter of heuven has appeared (iv. 52!); yásmád duşvápnyád ábhaisma ápa tád uchatu let her (Dawn) dries away with her light the cril dream that we have feared (viii. 47!*).

a. In B, three uses of the aer ind- may be distinguished: 1. It expresses what has occurred in the speaker's experience, very commonly in the statement made by the witness of an action; e.g. take he gandharvals aim addre: Jyók vi lyóm urvási mannayésv avátsit then the Gandharvae spohe topether: this Urvait has well long among men (SB.). As compared with the impf. It never narrates; e.g. yajño val develbya ud akrāmat; to devá abruvan; yajño val na na akrāmit the sucrifice sent areay from the gods; the yods then said: the vacrifice has gods among from the gods; the yods then said: the vacrifice has gods areay from the gods; the yods then said: the vacrifice has gods areay from the gods; the has died to-dep (MS.); tâm aprehan; kismai tvám abandir (it they asked him; is whom have you sacrificad? (MS.); tâm devá abruvan; mahān vā ayam abhūd yó vṛrām āvadhīd (it the gods said of him; he has shows himself great onle has show Fytre (TS.); tê ha hour; aguāye tlatha, iti tâtas tasthāv, aguāye ya azthād iti tām aguāv ajuhavnh they said; stand still for Agui; then

it then still; thinking it has dood still for Agni, they excritical it in Agni (SB).

- 2, it is employed by the author with regard to what from his own point of view has either just happened or has occurred in the more remote past; e.g. so bandhur sunsairyasys yam purvam avecama this is the import of the Sundairya oblation which we have explained above (SB.); pure va etan deva akrata yet purelasains tat purelasainam purelasaivam because the gods have made these codes their castles, the colors we we collect (AB.). The advert pura is not infrequently used with these aerists; e.g. ná vá etásya brahmanáh pura damam aksan krohming have apper hitherto enter his food (TS.).
- 3. it expresses what results from a ritual net or is antocodent to it; c. g. putrásya náma grápáti; prajám evá, ánn sám atenit se give die en a name: he has this extended he rece (MS.); etád vál trifyam yajfám apad yás chándanni, ápnóti berely he has obtained the third merifice when he obtaine the motres (TS.); yád dhí, asya, amedhyám ábhút tád dhí, asya, atád avadhúnáti mhai has been impure in it, thai ra it he shakes off in this may (SB.).
- D. The pluperfect, as an augmented perfect, is equivalent to the corresponding Greek tense in form only. It cannot be distinguished in syntactical use from the impf. in some examples and from the aor. in others; e.g. átrá samudrá à gulhām à survam ajabhartana then ye brought the sun hidden in the sea (x. 727); ud u syá deváh savitā yayāma hiranydyīm amátim yām ááisret that god Savitr now has raised up the golden sheen which he has spread out (vii. 381).

Future.

214. A. 1. The simple future is in comparatively rare use in V., being formed from only lifteen roots in the RV. and from rather more than twenty others in the AV. This limited employment is accounted for by its sense being partly expressed by the subjunctive and to some extent by the present. It means that, according to the opinion, expectation, intention, hope or fear of the speaker, an action is to take place in the near or the remote future. The sphere of the future includes that of the will, the specific meaning of the subjunctive, but the stress is here laid on

the futurity rather than the purpose; e.g. atha atah pasor vibhaktis; tasya vibhāgam vakṣyāmaḥ next (comes) the division of the (sacrificial) animal: (now) we will (shall) state its division (AB.).

Examples from the RV, are; stavisyami tvam aham I shall protective (5.44); him avid vakayami kim u nu manisya what pray shall I say, what shall I move think? (vi. 90); yady eva karisyatha ahkam davair yajniyaso bhavisyatha I yo will do an you will be partikers of the sacrifics with the years (1.161); na tvavam indra kaa cana na jato na janisyate no one squal to the, O Judru, has been born or will be burn(1.81).

- 2 In B the simple future is frequently used after verbs of speaking, knowing, thinking, hoping, fearing, which are sometimes also to be supplied; e.g. ac bravid: idim univi viryam, the te pre dasyami (it he said: here is hereian in me, that I will give then (TS.); to he, doub kone rajide, kone anthone yourgame it they said: with whom as king, with whom as lender shall us light? (SB.); taken vidyad: varsisyat, it in regard to that he should know: it will vain (SB.); indre he va itself neaker: mahat via ito bhvam jamiyyate Indra reflectat: a great abase will arise from this (SB.); sarva devata assessed arise from this (SB.); sarva devata assessed arise from the (SB.); arva devata assessed arise from the good hoped: he will begin with me (AB.); yadi biblingad discarma bhavingami, it! if he should four, 'I shall sufer from the disease' (TS.); asarva va istaka acinvata: divam a roksyama iti the description that up the bricks (thinking): we shall scale houses (MS.).
- a. After an impv., the fut, is often used with atha; e.g. patim not the punar yuvanam kurntam: atha wam vakayami (SB.) seals my ausburd young again: then I shall till you (too).
- 8. After the impv. of all or practities I, pers. full is equivalent to an exhortation; e.g. practita, tall egyamah coses, see will go there (SB.).
- y. With the negative na, the 2 and even the 3 pera may have the value of a prohibition; e.g. devan rangament, alighannen: na yakg-yadhra thi the Ranguess sended to stop the gods (maying): you shall not surrities (SB.); tan vieve deva anoundyants nobe pasyanti nobe, iti all the gods drove them back (saying): they shall not struk here, not here (AB.).
- B. The periphrastic future though not occurring in V., is frequent in B. It expresses that semething will take place at a definite point of time in the future. It is therefore often accompanied by such words as prattir early in the marking, avia to-merow (but never by adyal to-day). The point of time, however, need not be expressed by an adverb; it may be defined by a clause. Examples are: supprate taming ratrim a gachatat, tan ma chan ratrim anto sayitase, jate u to 'yam tarbi putro bhavita cover for the night of this day year, then you

will lie beside me for one night, then he bles men of thine will be horn (SR); yadd pura samethanid dirycta, adya varrisyati, iti brityad; yadd samethite syo vrasia, iti brityat (fit the vessel) should be broken before the completen of this sacrifice) he should say; if will room to day; if it has been completed, he should say; if will room to marrow (MS); yarhi vava vo mays, artho bhavita, tarby eva vo hasp punar agantasmi when you will have seed of me, then (on that particular occasion) I will some back to you (AB.).

a. Sometimes this form is used to express not that an action will take place with rerisinty; e.g. ef. ova_lyam adva_api pratisted_ad_u ova_api_ato'dhi bhavita this is the famedation in day, and it will also (certainly) be so in future (\$B./.

A. Imperative.

215. The only pure impv. forms are those of the 2. 3. sing, and 3. pl., represented by bháva and bhávatāt, bhávasva; bhávatu; bhávantu, bhávantām. The forms later regarded as imperatives of the L pers., bhávāni, bhávāva, bhávāma are subjunctives (cp. 131); while the 2. 3. du. and 2. pl. bhávatam, bhávatām, bhávatām, bhávatām; bhávata, bhávatam, bhávata, bhávatam.

a. The impv. does not express commands only, but also a desire in the widest sense, such as a wish, a request, advice, a direction; e. g. devām thā, ā vaha bring hither the gods (i. 14¹¹); áheļamāno bodhi be not ungry (i. 24¹¹); imāni asya šīrṣāṇi chinddhi cut off these heads of his (MS.); vṛkṣé nāvam prāti badhnīṣva tie the ship to the tree (SB.); prā vām ašnotu suṣṭutiḥ may the hyma of praise reach you two (i. 17⁰); hānta na ēko vēttu come, let one of us find out (SB.).

b. The sphere of the ordinary impv. is the present; it may, however, still be used for the later of two opposed actions; e.g. váram vrnisva átha me púnar dehi choose a boon and then give it me back (TS.). The form in tad, however, has a tendency in V. to express the more remote future, and in B. does so distinctly; e.g. ihá evá mā tişthantam abhyéhi iti brûhi, tám tú na ágatām pratipra

brutāt tell her: come to me as I sland here; when she has come, you shall (then) tell it us (SB.). As this form is only active, the subj. takes its place in middle verbs; thus tâm vṛṇiṣva = do thou choose it (now) as opposed to tâm vṛṇāsai choose it then (SB.).

a. The gennine impy, seems never to be found in negative sentences; thus it never appears in V, with the prohibitive particle mā (which is used with injunctive forms only, and in B, almost exclusively with the nor, inj.). It is employed in positive principal clauses only; e. g. wi no dhehi yatha jivāma se dispose se that see mas lice (SB.). A subordinate clause with ind., subj., or (very rarely) out, may precede or follow; e. g. yas twim datam saparyati, taya sma prāvitā bhava he ha promater of him who adores then as a messenger (i. 12°); sam vidūsā naya yo ., anusiasti bring as together with one who known, who may are us directions (vi. 54°); idām me haryatā vāco yāsya tārema tāraah šatām himāb sladly acres this word of mins by the force of which we would pass a headred science (v. 54°). In such periods the form with thid would regularly be used in B.

B. The RV, has a number of 2, sing, forms made with si added directly to the root, which are clearly used imperatively, as is indicated by their being generally accompanied by imperatives (sometimes by subjunctives and imperatives); e.g. å develbir yaht yaksi on commonly like gods and marifies (i. 14°). These forms are confined to the RV. and passages borrowed from it) except satsi (AV, vi. 110°); and they are restricted to positive principal sentences.

B. Injunctive.

Formally this mood corresponds to an unaugmented past tense (including the 2, 3, du. and 2, pl. as represented by act. bhávatam, bhávatām, because it cannot always be distinguished from the subjunctive (e. g. gamat might be the subj. of á-gam or the inj. of á-gamat) or from an unaugmented indicative (e. g. cáraḥ might be = á-caraḥ). Judged by its uses the inj. probably represents a very primitíve verbal form which originally expressed an action irrespective of tense or mood, the context showing

which was meant. The addition of the augment gave the sense of a past tense to one set of forms, while the rest finally became incorporated with the impv. The general meaning of the inj. expresses a desire, combining the senses of the subj., the opt., and the impv. As compared with the subj., the inj. is essentially appropriate in principal clauses, though it sometimes appears in subordinate clauses introduced by relatives or the relative conjunctions yad and yada.

a. The first person expresses an intention the execution of which lies in the power of the speaker; e.g. indrasya nu viryant prá vocam non I will proclaim the heroic deeds of Indra (i. 321). Sometimes, however, the execution depends on another; e.g. agnim hinvantu no dhiyas: téna jeşma dhánam-dhanam let our prayers urge Agni: through him we

shall assuredly win booty after booty (x. 1561).

b. The second person is used exhartatively, very often beside an impv.; e.g. sugā naḥ supāthā kṛṇu; pūṣann ihā kṛatum vidah do thou make fair paths, for us easy to traverse; O Paṣan, here procure us wisdom; adyā no dava skvih sānbhagam, pārā duṣvāpnyam suva ta-day, O god, procure us good fortune; drive away evil dream (v. 82°). A parallel opt is much less common; e.g. eténa gātum vido nah; ā no vavṛtyāh suvitāya by reason of that find for us the path; mayst thou bring us to welfare (i. 1781°).

c. The third person also is used exhortatively, very often beside an impv.; e.g. sémám vetu vásatkrtím; agnir juşata no girah let him come to this Vasat call; may Agni accept our songs (vii. 15°); it is often accompanied by a 2. sing, impv.; e.g. å idám barhír yájamanasya sīda; áthá ca bhūd ukthám indraya šastám seat thyself upon this straw of the sacrificer; and then may the hymn be sung to Indra (iii. 58°). It appears less frequently with the subj.; e.g. úpa bráhmání spnava imá no, áthá to yajňás tanvé váyo dhát muset thou listen to these our prayers, and then let the

sacrifice bestow vigour on thyself (vi. 40%). A parallel opt, is not common: e.g. pári no hetî rudrásya vrjyāh, pári tveṣásya durmatír mahi gāt would that the dart of Rudra pass us by, let the great malevolence of the impetuous one avoid us (ii. 33%).

d. The injunctive is very frequently used alone (unaccompanied by any other modal form) in an impv. sense; e.g. imā havyā juşanta nah let them accept these oblations of ours (vi. 5211); the preceding verse has the regular impv.: juşantām yūjyam pāyah let them accept the suitable milk.

In negative sentences the inj. is the only mood (with the exception of the single opt, form bhujema) with which the prohibitive particle må can be used; e.g. må na indra pårä vrnak do not, O Indra, abandon us (viii. 97'); višväyan må na å gan let not any swelling thing come near us (vii. 50'); må täntus chedi let not the thread be cut (ii. 28'). The nor, form is commoner than the impl. form in the RV., but its relative predominance has greatly increased in the AV.

- c. The inj. not infrequently expresses a future sense like the subj. (215 C) in two types of sentences:
- 1. in positive interrogative sentences; e.g. kó no mahyá áditaye púnar dát who will give us back to great Aditi' (i. 241). The subj. itself is here sometimes found beside it: e.g. kadá mártam arādhásam padá kaumpam iva sphurat, kadá nah śuśravad girah when will he spurn the niggardly mortal like a mushroom with his foot; when will he hear our songs? (i. 845).
- in negative sentences with na; e. g. yam ādityā abhi druhó rākṣathā, nem aghām nasat whom, O Adityas, ye protect from harm, him misfortune will not reach (viii, 47¹).
- a. In B. the use of the inj. in positive sentences has almost entirely disappeared. The SB., however, preserves several examples; e.g. devan avat let it refresh the gols; also sometimes in subordinate clauses, especially with ned; e.g. ned islam bahirdha yajhad bhavat lest it be outside the sacrifics.

On the other hand the inj. is very frequent in negative sentences,

in which it constantly appears with mf, in the rust majority of cases in the nor, form. Only a few examples of the impf, form occur: må vadhadhvane slow not (TS.); må bibblita from and (AR.); kilbingen nu imi yatayan let them not represent on a facility (AR.); and from the perfect; må anympthah slow sea (SR.);

C. Subjunctive.

The meaning of the subj. is best brought out by contrasting its use with that of the opt. From this it appears that the fundamental sense of the subj. is will, while that of the opt, is either wish or possibility (this mood being therefore alternatively called optative or potential). This distinction appears clearly from the fact that in the first person in independent sentences one group of verbs in the RV, employs the subj. exclusively or almost exclusively, while another employs the opt., because in the former the execution is dependent on the will of the speaker, while in the latter it is not in his control, but is only possible. With the subj. are thus used the verbs han spike, kr make, su press bru sneak With the opt, on the other hand appear: ji conquer, tr overcome, sah compuer; as and nas obtain, vid acquire, is be muster of; sac be associated with; a-vet attract (to the sacrifice); sak be able; mad be happy; rdh prosper; pas like to see; as be (with predicates such as prosperous, &c.); also certain sacrificial verbs: idh kimile (with the co-operation of the god), das worship, vac and vad speak (effectively), vidh serve, sap please = obtain the favour of (a god), hū call (= bring hillher)

 The meanings expressed by the different persons of the subj. are the following:

The first person declares the will of the speaker; e.g. svastaye vayum upa bravamahai for welfure we will invoke Fagu (v. 5112). It is often accompanied by the particles nu and hanta; e.g. pra nu voca sutéşu vam I will now praise you two at the libations (vi. 591). The t. du. and pl. may also express an exhortation to another to share an action with

the speaker, an impv. usually then preceding; e.g. daksipaté bhavă me: ádhā vrtrāņi janghanāva bhūri stand on my right: then we two will slay many focs (x. 837); or an exhortation to aid the speaker; e.g. jéṣāma_indra tváyā yujā we will conquer (= let us conquer) with thee us our ally (viii. 63").

In B. the usage is the same; e.g. váram vrnat l soil items a boss (TS.); hanta, imán bhlianná seill, l seill terify than (AB.); váram devá abravan; sómam rájánam hanáma, iti the gods soid to Fára; lef us stay king Sona (TS.).

The second person is used exhortatively; hano vrtram, jaya apah slay Vrtra, win the waters (i. 80°). It often follows a 2. pers. impv.; e.g. agne śrnnhi; devébhyo bravasihear, O Agai, do thou say to the gods (i. 139°); sometimes it follows a 3. pers. impv.; e.g. a vam vahantu. . áśvah, pibatho asmé mádhûni let the horses bring you two; do ye drink the horied draughts beside us (vii. 67°). When an expectation is indicated, the subj. is almost equivalent to a future; e.g. áchánta me, chadáyátha ca núnám ye have pleased me and ye shall please me now (i. 165°).

In B. the 2, pure subj. is used only when the speaker makes a condition or gives a direction relating to the (not immediate) future; e.g. also etam varam avguita: maya, ova pracim disam pra janatha, iti so he made this emolities: through me pe shall (in future) discover the content quarter (AB.).

The third person is as a rule used in exhertations to the gods, though the subject is not always the name of the deity; e.g. imam nah śrnavad dhávam he shall hear this our call (viii. 4322); pári no hélo várunasya vrjyāh; urám na indrah krnavad u lokám may the wrath of Varuna avoid us; Indra shall procure us wide space (vil. 842); sá devám a ihá vakṣati he shall bring the gods hither (l. 12); prá te sumná no aénavan thy good intentions shall reach us (viii. 905). The subj. sentence is sometimes connected with a preceding one; e.g. agnim the; sá u áravat I praise Agni: he shall hear (viii. 4324). The subj. here often approaches the

future in sonso, being then usually opposed with nunam or nu to another verb; ud u syá deváh savitá. asthát; nunám devébbyo vi hi dháti rátnam god Savilr haz just urisen; he will now distribute bounty to the gods (ii. 88°); uvása, usá uchác ca nú Dawn has Aushed (in the past) und she will flush now (i. 48°). Sometimes there is no opposition; e.g. á ghá tá gachán úttará yugánt, yátra jámáyah kruávan ájámi there shall come those later generations when those who are akin will do what befits not kinsmen (x. 10°°).

In B. the 3, pers. subj. is not found in the hortative sense, appearing only when a condition, promise, or curse is expressed; e.g. vrplava, ity abruvan; so 'bravin; maddovaty's eva samid asad iti they said; choose a hose; he replied; the fact shall be succest to use (MS.); så abravid; váragi vrpat; khátát parábhavisyánti mánye; táto má pará bhúvam iti; purá te samvataarád ápi rohad ity abravit she mill I mill make a condition; I thick I shall pertah in consequence of digging; let me not pertah. He replied; before the lapse of a year for you, it (the wound) shall had up (TS.); devès tán asapan; svena vah kiskuna vajrena vrácem iti had up gods cursed them (the trees); they shall destroy you will your own handle, still a lot (TB.). The 3, pers. subj. often also expresses the purpose of a coremony; e.g. scradd iti saramáyam barbir bhavatí (MS.) the litter is made of rocks with the intention; if shall destroy him (the adversory).

- 2. The syntactical employment of the subj. is twofold.
- d. It appears in principal sentences:
- a. with interrogatives, either the pronoun or the adverbs katha how? kada when, and kuvid; e.g. kim ū mi vah krņavāma what, pray, shall we do for you? (ũ. 29°); kathá mahé rudriyāya bravāma how shall we speak to the great Rudra-host? (v. 41°); kadā naḥ śuśravad giraḥ when will he hear our prayers? (i. 34°). kuvid nearly always accentuates the verb (which is thus treated as in a subordinate clause); e.g. aśvinā sū rṣe stuhi; kuvit te śravato hávam the Aśvins praise well, () seer: shall they hear thy call? (viii. 26°).

In B. first persons only seem to be met with in this use, and an interrogative word is sometimes lucking.

β. In negative sentences with nā not; a. g. ná tā naśanti;

ná dabhátí táskarah they perish not; no thief shall (can) harm them (vi. 283).

In B, no is similarly used; e.g. no and parall has come such sortrena ampto 'est from non-command, as one shall be immerial with his hory (SB.). Once only, in a command, is the such used with man absuming some man if padyheat you shall me approach me (in future) against my will (SB.).

- b. In dependent clauses the subj. is used either with a negative or with relatives (prenominal or adverbial):
- a. in a final sense with the negative particle ned that not, lest. The antecedent clause has either an ind. or an impv.; e.g. hotrad aham varuna bibhyad âyam, ned eva mā yunājann atra devāh fearing the office of Hotr. O Varuna, I went away, lest the gods should appoint me thereto (x. 51°); vy uchā duhitar divo mā cirām tanuthā āpah, net tvā stenām yāthā ripūm tāpāti sūro arcisā shine forth, daughter of the sky, ilday not long thy work, lest the sun scorch thee, like a hostile thief, with his ray (v. 79°).

In B, the antecedent clause has either an ind, or an opt.; a.g. 4tha yan na prékyate, non ma rudré himasad iti non (the reason) why he does not look to less Riveiro should topure him (SB.); tan na dadbhih khāded, non ma idam rudriyam daté himasad iti he should not then it with his less that belongs to Baden injure his linia (SB.). A gerundive in the autocodent clause has also been noted in the AB.

B. in relative clauses:

1. such a clause normally precedes if it contains a supposition determining the sense of the principal clause; the latter usually has an impy., not infrequently a subj., seldom an inj. or ind.; e.g. yo nah pṛtanyād, ápa tām-tam id dhatam whoever shall combat us, him do ye two slay (i. 132*); yās tūbhyam dāšān nā tām āmho ašnavat who shall serve thee, him no distress can reach (ii. 23*); utā nūnām yād indriyām karisyā indra pāumsyam, adyā nākis tād ā minat and what heroic, manly deed thou, Indra, shall now do, that let no one belittle to-day (iv. 30*); yāsmai tvām sukfte jātaveda, u lokām agne kṛṇāvah syonām, sā rayīm

nasate syasti the rightcous man for whom thou shall procure, O Agni Jutavedas, a comfortable place, he obtains riches for welfare (v. 411).

In B, the use of the subj. in relative clauses is similar; but here the subj. is by far the commonest form in the principal clause, the imper and ind. (sometimes amitted) being rare; e.g. they abravan, varam vynamahai; yad asurah jayama, tan nah saha asad iti they suid, see will make a condition; what we shall win from the dance that shall be ours in common (TS.); yas twa kas on upayat, timpim eva jawa where shall some towards you, sit still; yad vindasai tat to 'guihotram kurmah what then shall find, that we (shall) make thy fre-oblation (MS.); tad vai sauredaham yam davah sadhave karmans jusantai that, indeed, (in) scattlent, if the gods shall to pleased with him for a good work (SB.). In the last example the relative clause exceptionally follows.

2. The relative clause follows if it expresses a final or consequential sense (in order that, so that) arising from the principal clause; the latter usually has an impy., but sometimes an inj., opt., or ind.; e.g. sam pusan vidusa nava. yó áfijasa anusásati, yá evá idám iti brávat associate us, O Pasan, with a wise (guide) who shall at once direct us and who shall say: here it is (vi. 541); asmábhyam tád rádha á gāt, śám yát stotřbhyn apáye bhávati let that wealth come for us which shall be a blessing to the praisers and the kinsman (ii. 8811); tád adyá vácáh prathamám masíya yéna ásuram abhi deva asama I would to-day think of that as the first (point) of my speech whereby we gods shall overcome the Asuras (x. 534); imám bibharmi súkrtam to ankusám yona arujasi maghavan chapharujah I bring to thee this well-fushioned weapon (with which =) in order that thou shouldst break the hoof-breakers (x. 44"). The subj. of these relative clauses sometimes comes to have a purely future sense; e. g. ó (=å u) té yanti yé áparisu pásyan those are comina who in future days will see her (i. 118").

In B; this type of relative clause with the subj. is more; e.g. yan ma dhinavat tin me kuruta promer for me that which shall reject me (SB.); bants vayam tat erjamahat yad saman anvamat iti cone, let us create, what shall come after as (SB.). y. with relative conjunctions :

yád, which, if the clause is determinative, means when;
 the dependent clause then precedes, while the principal clause usually contains an impv., but sometimes an inj., a subj., or an opt.; the conjunction means in order that, so that, if the dependent clause is final or consequential; the dependent clause then follows, while the principal clause contains an impv., a subj., or an ind., e.g.

if yad = when: uṣo yad adya bhānuna vi dvarāv pṇāvo divāh, prā no yachatād avṛkām () Dawn, when to-day with thy beam thou shalt open the doors of heaven, then bestow on us sufe sheller (i. 48%); yād adyā bhāgām vibhājāsi nṛbhya, uṣo devo no ātra savītā dāmūnā ānāgaso vocati sūryāya when thou shalt to day distribute a share to men, O Dawn, god Savite, the house friend, shall declare us guiltless to Sarga (i. 123°); yād va āgaḥ puruṣātā kārāma, mā vas tāsyām āpī bhūma when we shall commit a kin against you after the manuer of men, let us not have a part in that (shaft) of yours (vii. 57°); yād dīdyāvaḥ pṛtanāsu prakrījān, tāsyā vām syāma sanītāra ājēḥ when shafts shall play in battles, of that conflict of yours we would be the winners (iv. 41°).

if yad = in order that, or so that: så å vaha devåtātim yaviştha, šárdho yád adyå divyám yájāsi so bring hither the gods, Ö youngest, that thou mayst adore the heavenly host to-day (iii, 194); tavéd u tāh sukīrtáyé 'sann utá prášastayah, yád indra mrjáyāsi nah these laudations and praises shall be thine, that thou, O Indra, mayst be merciful to us (viii, 4543); ná pāpāso manāmahe, yád in nv indram sákhūyam kṛṇáv-āmahai we deem nut ourselees wicked, (so) that we can now make Indra our friend (viii, 6111). In such posterior clauses the yád semetimos comes to express the content of the principal clause; v.g. ná te sákhū sakhyām vaṣṭy etāt, sátukṣmā yád viṣurūpā bhāvāti (x. 1041 (hy friend wishes not this friendship, that she who is of the same type (= akin) shall become of a different kind (= not akin). This yád may

once be translated by till: kiyaty a yat samaya bhavati ya vyusur yas ca munam vyuchan in what time will it be that (= how long will it be till) she shall be between those that have shone forth and those that shall now shine forth? (i. 11319).

In B. the subj. is rarely found in these clauses with yad; a.g. 1at prapriati yat to prand vatum apinadyatal attain this that your breath shall transfer that for the send (SB.).

 yátra schen seems not to occur in V. with the subj. when it is a genuine conjunction (that is, when it is not equivalent to the loc. of the relative pronoun).

In B., however, it is found with the subj, in the sense of a future perfect; e.g. yatra hota chandasah param gachat, tat pratiprasthata prataranuvakam upa kurutat when the Hotr shall have got to the end of the metre, then let the Prutiprasthatr start a Prataranuvaka (SB.).

3. yáthá with the subj. as an antecedent clause means as: the principal clause containing an impy, or a subj.; as a posterior clause it has the sense of in order that, so that, the principal clause containing either a demand (generally impv., occasionally inj., opt., or gerundive) or a statement (ind. pres. or nor., net. or pass.). Examples of the first use are: yáthā hotar mánuso devátātā yajāsi, evā no adya yakşi deven as those canst, O priest, worship at the divine service of man. so do thou for us to-day worship the gods (vi. 41). This use does not seem to occur in B. Examples of the second use are: grhan gacha grhápatní yátha ásah go lo the house that you may be mistress of the house (x. 85%); idanim ahna upavacyo nfbhih, śréstham no átra drávinam yátha dádhat at this time of day he is to be addressed by men that he may here bestow on us the best wealth (iv. 541); mahatam a vrnimahé 'vo, yatha vasu nasamahai we implore the favour of the great, in order that we may obtain riches (x, 36"); idám pátram apäyi mátsad yátha saumanasaya dovám this bowl has been drunk up, in order that it may exhibitate the god to benevolence (vi. 4416). The negative in such clauses is mi or nu.

- a. In B. the usage is similar: the principal clause here contains either an impo, or a subj.; e.g. taths me kurn yatha aham imam senam jayani se arrange for me that I may conquer this army (AB.); supplifing my sam dadhayahat yatha tyam aya pravisaniti non let us two make no agreement is order that I may only into the (MS.).
- 4. yadā when, with the subj. (pres. or aor.), which then has the value of a fut. perf., is regularly antecedent, the principal clause containing an impv. or a subj.; e.g. śrtám yadā kārasi jātavedo, ātha im enam pāri dattāt pitf-bhyah when thou shalt have made him done, then deliver him to the fathers (x. 162); yadā gāchāty āsunītim etām, ātha devānām vašanīr bhavāti when he shall have gone to that spirit world, then he shall become subject to the gods (x. 162), yadā kadā ca whenever seems to give the verb the same sense; yadā kadā ca sunāvama somam, agnīs tvā dūtō dhanvāty ācha whenever we shull have pressed Soma, Agnī shall husten to thee as a messenger (iii. 584).
- a. The usage of B, is the same; e. g. så yadå tåm ativårdhå, åtha karsûni khåtvå tåsyäni må bibbaråsi seken I shall have outgrown that (vessel), then having dag a trench you shall keep me in il (SB.).
- 5. yádi if with the subj. generally procedes the principal clause, which contains an impv., a subj., (rarely) an opt., or an ind. (sometimes to be supplied); e.g. yádi stómam máma árávad, asmákam indram indavo mandantu if he shall hear my praise, let these drops of ours gladden Indra (viii. 113); yájāma dován yádi šaknáváma we will adore the gods. If we shall be able (i. 2713); yádi práti tvám háryāh ... apá enā jayema if thou shall accept (it) gladly, we might thereby win the waters (v. 213); indrá ha váruņā dhésṭhā, yádi sómaih ... mādāyaite Indra and Varuņa (are) the most liberal, if they shall delight in the Soma offerings (iv. 413).
- a. In B. the subj. with yield is very rare; an example is: yield tva, exit punar bravatas, tvans bratist if they less shall any this again in thee, do then say (SB.).
- yad so long as occurs twice with the subj. in the RV.: anānukṛtyám apunáś cakāra yāt sūryāmāsā mithā uccá-

rātah he has once for all done what is inimitable so long as sun and most alternately shall rise (x. 68%); vāsiṣṭhaṃ ha vārupo . . fṣiṃ cakāra , . yān nú dyāvas tatānan, yād nṣāsaḥ Varuṇa has made Vasiṣṭha a seer, so long as the days shall extend, so lang as the dawns (vii. 88%). In B. yad does not occur.

8. The subj. is sometimes used in an antecedent clause with ca in the sense of if, which is then treated as a subordinate conjunction and accentuates the verb; e.g. indras ca mrisyati no, no nah pascad agham nasat if Indra shall be gravious to us, no ceil shall afterwards touch us (ii. 41").

D. Optative or Potential.

216. t. The meaning of the opt. is predominantly a wish, which is modified according to the person of the verb.

The first person, which is very common, expresses the wish of the speaker, generally addressed to the gods; e.g. usas tâm asyâm yasasam rayim O Dawn, I would obtain that glorious wealth (i. 92°); vidhêma te stômaih we would worship thee with songs of praise (ii. 93); vayâm syâma pâtayo rayinâm we would be lards of riches (iv. 50°).

In B. the sense of the first person is similar, but its occurrence, owing to the nature of the subject-matter, is far less common; s.g. vise on kentraya on samadam kuryam i should like is recate smally between proper and mobility (MS.).

The second person is much less common. It is almost exclusively used to express a wish or a request addressed to a god; e.g. a no mitravaruna hotraya vavrtyah proy bring Mitra and Varuna to our oblation (vi. 11'); tya me havam a jagmyātam so, pray, do go two come to my call (vi. 50''); pra su na ayur jivase tiretana do ye, pray, extend fully our allotted span that we may line (viii. 1822). We might here often rather expect the impy., which indeed frequently either precedes or follows the 2 opt.; e.g. dhişva vajram raksohātyāya; sāsahīsthā abhi spfdhāh take the bolt for

the slaughter of the demons: mayst thou overcome our foes (vi. 4518); imain me samidham vanch; ima û şû śrudhi girah pray accept this my fuel; graciously hear these songs (ii. 61).

In B, the second person is used almost exclusively in wishes; e.g. asmin yajamane bahvyah syata may see be memorous beside this succified (SR.).

The third person is used in the three different senses of wish, precept, or supposition; e.g. midhvam asmakam babhuyat may he be bountiful to us (i. 27°); imam amftam dutam kruvita martyah this immortal the mortal should make his messenger (viii. 23°); praann apir apraantam abhi syat the friend who bestons would prevail over him who does not beston (x.117°). In the sense of a supposition (regarded as possible or probable) the opt. seldom appears independently, but often in an apodosis.

In H. It is common in all three senses; expressing a whit; a.g. apain the system per left entire (TS.); a general precept (where a germedive may also be used); e.g. kasume vashas agains a dathiyatian, to adhivaryave doye searing lines garments the two should lay the fire; the two (carments) should be given to the Adhivaryas (MS.); a supposition in the apodesis of periods, but seldem independently; e.g. is, any idea raterim and grain pra haroyur; apo vai sauth; sameyeyur over (MS.) they should not during that night tries water into his house; for scalar is extraction; they should thus extinguish (if they did this). The protests in this example must be amplied.

- The syntactical employment of the oplative is twofold:
- a. it appears in principal sentences (for the most part retaining the sense of a wish) with interrogatives, either the pronoun or the adverbs kathå how? kadå when? and kuvid; e.g. kåsmat deväya havişā vidhema what god would we worship with oblation? (x. 121); kadå na indra räyä å dašasyeh when wouldst thou, O Indra, bestow riches upon us? (vii. 373); kuvit tutujyät sätäye dhiyah (i. 1434) would he not stimulate our propers for gain? (cp. p. 354, 2 a). A possihility is sometimes thus repudiated; e.g. kåd dha nünām

risk vádanto ánriam rapema how could we now speaking righteous words utter unrighteousness (x. 10%).

In B. the optative with interrogatives may express a wish, prompt, possibility, or the repudiation of a suggestion; e.g. kathan no prajectory as should be propagate squadf? (SR.); yamim eva porvam sament to should first promounce the formula subtressed to Forms (AB.); kim mains tataly syst (SR.) what mostly then occurs to me (if I did this?) kan tad a drivets who smould pay affection to that I SH.;

a. The opt. appears in negative sentences with ná nat, sometimes nú cid never. The sense is either optative or potential; e.g. ná risyema kadá caná may we never suffer harm (vi. 54°); nú cin nú väyör amftam vi dasyet may the nectar of Vayu never fail (vi. 37°); ná tád devó ná mártyas tuturyád yáni právrddho vrsabhás cakáru no god, na mortal could surpass what the mighty bull hus done (viii. 96°). The only opt. form with which the prohibitive má occurs is bhujema: má va éno anyákṛtam bhujema may we not suffer hefore you for a sin done by others (vi. 51°).

In B, the opt, is used with no to express either a general prohibition or a potential sense; e.g. they a tid vratam: no anriam vaden, no manuam asniyat this is his such a should not apost the cutroth, he should not must; no enemy dadhikrava cana pavayam kriyat Cana pavaya

b. In dependent clauses the opt. Is used with relatives (pronominal or adverbial);

a. such a clause having a determining sense, usually precedes. This type is very rare in V.; e.g. suryam yo brahma vidyat, sa id vachuyam arhati a priest who should know Surya deserves the bridal garment (x. 85%).

In B., on the other hand, changes of this type, which always imply a supposition, are very common. The opt, here expresses a precept or a potential sense; the principal clause most often has the opt, also; e. g. yam divisyat, tain dispayer whom he may hate, he should think of (TS.); yo va imam alabheta, undergota, asmat papmanah he selected to after this (bull), would be delivered from this sin (TS.). In the principal clause a gerundive occasionally appears or the verb to be has to be

supplied; e.g. yō rūstrād āpabhūtah syāt tāsmai hotavyā tās skould be aftered for him who abould to deprived of his kemphas (TS.); yasya_agmayo grāmyona_agminā samdahyeran, kā tatra prāyakcittili if nes one's fires should be united with a ciliage for, what expension (is) there? (AB:).

β. the relative clause, if it has a final or consequential sense (in order that, so that) follows. The principal clause contains an impv., a subj., or an opt.; e.g. revatīr nah sudhamāda indre santu yābhir mādema (i. 30¹³) let our feasts beside Indra be rich (by which =) that we may rejoice (in them); dhāsatho rayim yōna samātsu sāhiṣīmāhi bestow wealth on us (by which =) that we may be victorious in battles (viii. 40³); yāyā āti višvā duritā tārema sutārmāṇam ādhi nāvaṃ ruhēma we would ascend the rescuing ship (by which =) that we may cross over all misfortunes (viii. 42³).

In B. final relative clauses with the opinion are care.

γ. with relative conjunctions:

1. yád if: in the antecedent clause of pres. conditional periods, the condition being generally regarded as unful-lilled. The apodosis normally contains a potential opt. (though isolated examples of the impv., inj., and ind occur); e.g. yád agne syám ahám tvám, tvám vä ghá syá ahám, syús to satyá ihá jásigah if I, O Agni, were thou, and thou werl I, thy prayers would be fulfilled (viii. 44²³); occasionally the fulfillment of the condition is expected; e.g. yác chu-śrnyá imám hávam durmársam cakriya utá, bhávor apir no ántamah if thou shouldst hear this call and shouldst not forget it, thou wouldst be our most intimate friend (viii. 4518). The temporal sense of when with the opt. seems to occur only once in the RV. (iii, 331).

In B. (as in V.) yad (f with the opt. is very common in the protests, when the fulfilment of the condition is not expected (yadi with opt. being used when it is expected); a.g. at yad bhidyets, artim arched yajamanah if it should be broken, the secretar result full into colomity (TS.). The infinitive with isvara may take the place of the opt, in the principal clause; e.g. yad ctain sameed tiverah parjunyo verstoh (the same in report this (formula), Purpunya suphi net rain (AB.). Sometimes the

verb (opt. of as be) is omitted in the apodessis. The opt. with yad here rurely expresses a purely hypothetical case (that is, without the implication that the condition will not be fulfilled); -, y. yan mim pravised kim ma changyah (TS.) if you were to conse me, of what as could you be to see? (niterwards he does enter Indra).

- a. yád with the opt in the final sense of in order that is very rare; e.g. yán núnám aśyám gátim, mitrásya yáyám pathá in order that I might now obtain a refuge, I would go on the path of Mitra (v. 64°).
- B. In B. yad with the opt in the sense of that is frequently used after ava kalpate as suitable, út sahate enderes, toháti desires, véda basss, yoktó bhavati is miest, in posterior clauses; a.g. ná hi tád avakálpate vád brůvát for il is not filling that he should my (SB.); ná vá abam idam út sahn yad vo hóta syam (SB.) I connel endure this that should be (- I cannot be) your Horr; tad thy ova brahmanona_estavyam yad brahmavarenal synt for that is to be aimed at by the Brahman, that he should be ploss (SB.); svayám vá stázmai devá yuktá bhavanti yát sadhu vadeyun for the gods thamseless are intest on this, that they should say ichat is right (SR.); kás tád voda yád vratapradô vratám upotsiňost for who knows (this thist -) relather he who hamile the fast-will (should said -) adds (fresh milk) to it (SB.). In the SB. favard also is used with this construction (in other Brahmanas with the manitive only) to express a possible consequence (though the rad is nearly always omitted); e, c. párán samid yajdó 'bhúd iti, lévaró ha yát táthá, svá syát (Ac sacrifice has rurned grany from him: it in possible that this enough to so (SB.). Otherwise the phrase regularly appears in the form of iti, invaro ha tátha eva syat, perlaps because isvará camo to be regarded as a kind of adverh - sombly this might be zo.
- 7. In B. yad introducing a clause with the opt accompanied by no and ending with thi, dependent on a verb of fearing or similar expression, is aquivalent to her; e.g. dava ha val hibhayam cakrur yad valuab... asurarakeasani, imani graham na hanyar iti the peds found but the American and Interpress should descrep this demand (SB.); indre ha valikaan cakre yan ma tan na habitahaved iti Indra penderal (fearing) best that should conquise him (SB.).
- yadi if with the opt does not occur in the RV and AV, at all, and only once in the SV.
- In B. it is very common, expressing a condition the fulfilment of which is assumed (while yad with opt, implies non-fulfilment of the condition). The clause with yadi generally procedes. The apodesis has:

a usually the opt., which expresses a procept applicable when the condition is fulfilled; a.g. yadt pura samathanad dirycta adya var-sleyati, iti bruyat if (the vessel) should be broken before the completion (of the sacrifice), he should say; it will cain to day [MS.; yadi na sakunyat so 'gnaye purolasam nir vapet if he should not be able to do so, he should offer a sake to April AB.). The procept occasionally has a potential sense; a.g. yady chatayisu dvayisu va avagisched, aparodhuka snam ayuh (MS.) if he (the banished man) should where after one or her illustrate, they might exclude him from the secretaryly (but not if he returns at the conclusion of the ceremony).

B. Isvara with the infinitive; e.g. isvare ha yady any anyo yajeta, atha hothram yase 'rich even if unather about sucrifice (instead of him), or is passible that from should some to the Half (AB.).

7. a perturbive; as yadd un fâyets, râkşoghnyo gâyatryo 'nhayâh g' il (the fire) should not be kindled. the demon-slaying revess are to be repeated (AB.).

- 8. an ind. (sometimes omitted if it is a form of as be); c.g. tasmād yadi yajās rkta ārtih syād brahmaņa eva ni vedayante therefore if at the sacrifice there should be any failure with regard to a Re verse, they inform the Brahman priest (AB.); yadi no yajās rkta ārtih syāt, kā prāyaścittih if we shall have an accident at the sacrifice in regard to a Re verse, what (is) the penance I (AB.).
- E The difference between yad and yadi with the opt. may be illustrated by the following example: yan no jaye-yur ima abhyapa dhavema, yady u jayems ima abhyapa vartemahi iti if they were to conquer us (not to be assumed), we should take refuse with these (friends), but if (as is to be assumed) we should conquer, we could again betake ourselves to them (MS.).
- 3. yátha used in V. only in the sonse of in order that, generally following the principal clause, which contains an impy., an inj., or an ind.; e.g. ápa visvam amitrán nudasva, yátha táva sárman mádema drive away all focs that we may rejoice in thy protection (x. 131); tváya yátha grtsamadáso... uparam abhi syúh, suribhyo grnaté tád váyo dhāh bestow on the patrons and the singer this blessing that through thes the Grtsamadas may be superior to their neighbours (ii. 4°);

å dåivyä vrnimahê 'vâmsi, yâthû bhávema milhûşe ånagâh see implore the divine aids that see may be sinless before the gracious one (vii. 972).

a. In B, yatha with the opt, has two mass: a. In anteredent chances in the same of as, as if, with a correlative meaning as in the principal chance, which contains an opt,, an ind., or no verb; e.g. yatha eva chinna naur bandhanat playeta, evam eva to playeran put as a best cut from its fastesing sould drift, so bey seeds drift (AB.); as yatha nad-yat parage paraphayed evam average hyugah parage para cakhyan as if he were boding uses as in the farther built of a row, so as me the end of his life from upor (SB.); atho yatha broyan stan me gopaya, itt tading eva tat then it (is) so as if he were to say; yourd this for not (TS.).

B. in posterior changes in the series of how, so that; s.g. aps janits yatha, lyam panar against do so find out how she could come back (SB.); tat tatha, ovalintaryam yatha, agaim vyaveyat banes it is to be so poured that it may divide the fire (MS.).

4. yatra and yada are not found with the opt, in V., and yarhi does not occur at all in the RV, and AV.

In B. all three conjunctions are used hypothetically with the opt. in the sense of when.

on yatra, besides having the sense of whom, in one, often seems to mean of the memoral when, as seen as; the principal charee has the opt, of the ind.; a. p. marutam suptakapalam mir vaped yatra vid rajanam hijyasut he should after a cube on acron sliches to the Murata in cost the people was to approve the hirsy (MS.); as yatra practuyat tad stant jupat or soon as he (the priest) togics to sing, one should matter the following program (SB.).

sh yada se som as seems often to imply that the action of the opt.
should be sammed to be past; it seems always to be followed by arisa
likes; c. g. sā yadā sampgrāmām jāyod ātha, aindrāgnām nir vapet as
som as he may have som a battle, he should succides to Indra and Apas (MS.).

y, yarhi shen is generally followed by the correlative tarhi then in the principal clause, which usually has the opt. also; e.g. yarhi prajah kandham nigaobayus, tarhi navaratrona yajeta when his people should be exposed to hanger, then he should sacrifice with the rate of nice nights (TS.).

5. ced if is used with the ind. only in the RV, and only once with the opt. in the AV.

In B. it is used with the opt. like yadi with which it may interchange): e. g. otám odd anyásmá anubroyás, táta evá to áiras chindyám if you eard to communicate this to marker, I would not gover hand (SB.).

Precative.

217. This form, which occurs in the RV. and AV. in principal clauses only, and never interrogatively, expresses a prayer or wish addressed to the gods almost exclusively, as is to be expected from the nature of those texts; e.g. yo no dvesty adharah sas padista may be who bates us fall to the ground (iii. 5321). When a negative is used it is na; e.g. bhago me agne sakhyé na mṛdhyāh may my good fortune, O Agni, not relax in (thy) friendship (iii. 5421).

In B. the precative is almost restricted to verse or prose formulas quoted and to paraphrases of such formulas; e. g. bhilyaninam úttaram samaim kriyasam iti gávam lákema knryát rould tha! I may do (this) to some next pour; so supring as should make the mark of the cores (MS.). Satám hima iti satám vargáni fivyásam ity evá, etád áha by the supremion 'a hundred minter' he supe this; 'would that I very live a hundred muce.' (SB.). It is, however, sometimes found in genuine prese narrative also; e.g. sá ha vák prajápatím uváca áhavyavád svá, ahám túbhyam bhilyásam l'ús said to Fragipatí: I mestid the set to be a constitute of survices for thee (SB.); tám sámpad; dhiyá-dhiya tvá vadhyásuh him (Agni) cursed (saying): I mist they may kill the with reputied diditeration (TS.).

Conditional.

218. In V. the conditional occurs only once (RV. ii. 30°) in a somewhat obscure passage, though the form abharisyat used after a past tense appears to mean would take away (in place of the future which would have been used after a present tense).

In B. the conditional is once found in a simple interrogative sentence: this evaluates thay in the sentence: this evaluates the property of the form of the should be have been affaird (SB.). Otherwise it occurs only in compound sentences:

L usually in both protacle and apodonic of conditional sentences, expressing what might have happened in the past, but did not happen because the condition was not fulfilled. The conditional clause is generally introduced by yad, rarely by yadi (216); e.g. at yad dha, api mukhād adrosyan, na ha, eva prāyašcittir abhavisyat if il (Sorna) had size flowed out of his menth, there would not have been a premner (Sit.), yad svarp na avakayo mūrdhā te vy apatisyat if you had not apoken thus, your head would have splil measules (Sit.); pādam te 'mlāsyatārp yadi ha nā, agamisyah your fest would have withered, if you had not come (Sit.).

- a. When yad is used with the opt, the supposed condition refers to the present (216).
- 2. in relative clauses dependent on negative principal clauses containing a past tense (always of vid find); a.g. să tâd evă nă avindat prajăpatir yâd âhosyut Prajapati found nothing that he could sacrifice (MS.); să văi tâm nă avindad yâsmai tâm dâkṣiṇām âneṣyat he found no one to whom he should give this sacrificial fee (TB.).
- 3. in a clause introduced by yad that dependent on a negative (or equivalent) clause; e.g. ciram tan mene yad vasah paryadhasyata he thought it too long (that =) till he should put on the garment (SB.) = he thought the time was not short enough till he should put on the garment.

APPENDIX I

LIST OF VERBS.

The order of the parts of the verb, when all are given, is: Present Indicative (ra.), Subjunctive (sa.), Injunctive (m.), Optative (or.), Imperative (1PV.), Participle (Pr.), Imperfect (IPP.); Perfect (PP.); Pluporfeet (PPE.); Anrist (An.); Precative (PDC.); Puture (PD.); Conditional (co.), Passive (rs.), Present, Aorist, Past Participle (Pr.); Garundiya (upy.); Gerund (up.); Infinitive (188.); Causative (cs.); Desiderative (pa.); Intensive (rar.).

The Rossan numerals indicate the conjugational class of the verb ; P. signifies that the verb is conjugated in the Parasmaipada (active) only. A, that it is conjugated in the Atmanepada (middle) only,

APPENDIX II

VEDIC METRE.

1. The main principle governing Vedic metre 1 (the source of all later Indian versification) 2 is measurement by number of syllables.3 The metrical unit here is not the foot in the sense of Greek prosody, but the foot (pads) or quarter in the sense of the verse or line which is a constituent of the stanza. Such verses consist of eight, eleven, twelve, or (much less commonly) five syllables. The verse is further more or less regulated by a quantitative rhythm (unaffected by the musical accent) in which short and long syllables alternate. Nearly all metres have a general iambic rhythm inasmuch as they show a preference for the even syllables (second, fourth, and so on) in a verse being long rather than short. In every metre the rhythm of the latter part of the verse (the last four or five syllables), called the cadence, is more rigidly regulated than that of the earlier part. Verses of eleven and twelve syllables are characterized not only by their cadence, but by a caesura after the fourth or the fifth syllable, while verses of five and eight syllables have no such metrical pause.

! Called chandss in the RV. limit.

2 Except the two metres Arya and Valtatiya which are measured by mores.

* A figurative sense (derived from for - quarter of a quadruped)

applicable because the typical stanza has four lines.

This seems to have been the only metrical principle in the Indo-Iranian period, because in the Avesta the character of a verse depends solely on the number of syllables il contains, there being no quantitative restriction in any part of it.

Verses combine to form a stanza or rc, the unit of the hymn, which generally consists of not less than three or more than fifteen such units. The stanzas of common occurrence in the RV. range, by increments of four syllables, from twenty syllables (4 × 5) to forty-eight (4 × 12) syllables in length. A stanza may consist of a combination of metrically identical or of metrically different verses; and either two or three stanzas may further be combined to form a strophe.

a. The following general rules of pressedy are to be noted. 1. The and of a verse regularly coincides with the and of a word because each verse in a stanza is independent of the rest in structure. 2. The quantity of the first and last syllables of a verse is indifferent, S. A vowel becomes long by position if followed by two consonants. One or both of these consonants may belong to the following word, The palatal aspirate on and the cerebral aspirate in (dh) count as 4. One vowel is shortened before another; double consonants. s and o are also pronounced 5 and 5 before & 5. The semirowels y and v, both within a word and in Sandhi, have often to be prononneced as I and u; e.g. siama for syama; suar for syar; vi usah for vy usah; vidáthesu anján for vidáthesv anján. 6. Contracted vowels (especially i and h) must often be restored; e.g. ca agnáye for eagnaye; vi indrah for vindrah; ávatu útáye for ávatútáye; & indra for endra. 7. Initial a when dropped after a and o must nearly always he restored. 8. The long vowel of the gen. pt. ending am, and of such words as data, sura, and a (as jyá-iatha for jyéstha) or at (se a-ichas for alchas) must often be pronounced as equivalent to two short syllables. 9. The spelling of a few words regularly misrepresents their metrical value; thus pavaka must always be pronounced as paváká, mylaya as mřlaya, and suváná marly always as svåná.

* No infringement of this rule occurs in any metre of the RV, but the comparatively rare Dvipadā Virāj (4×5), in which three exceptions

There are also several longer stanzas formed by adding more verses and consisting of 52, 56, 60, 64, 68, and 72 syllables; but all these are rare; only two stanzas of 68 and one of 72 are found in the RV.

³ The rowels I, 0, s when Pragrbys (25, 26), however, remain long before rowels. When a final long rowel is the result of Sandhi, it also remains long; teams addt for teams addt.

I. Simple Stanzas.

2. The Vedic hymns consist chiefly of simple stanzas, that is, of such as are formed of verses which are all metrically identical. Different stanzas are formed by combining three, four, five, or six identical verses. The following is an account of the various types of verse and of the different simple stanzas formed by them.

A. Verse of eight syllables. This is a dimeter verse consisting of two equal members of four syllables each, the opening and the cadence. In the opening the first and third syllable are indifferent, while the second and fourth are preferably long. When the second is short, the third is almost invariably long. In the cadence the rhythm is typically iambic, the first and third syllables being almost always short, while the second is usually long (though it is not infrequently short also). Thus the prevailing scheme of the whole verse is $\times - \times - \times - \times = \times$

a. Evan after every admissible vowel restoration a good many versus of this type exhibit the anomaly (which cannot be removed without doing violence to the text) of having one syllable too few; a.g. fain this vayan pito. There are also have a very few instances of one or even two syllables too many; c.g. again: Its | bhujam yavi | etham and vayan tad as | ya samohrtam | vasu.

3. a. The Gayatri stanza consists of three cotosyllabic verses; 2 e.g.

Next to the Tristubh this is the commonest metre in the RV., nearly one-fourth of that Samhita being composed in it; yet it has entirely disappeared in Classical Sanskrit. The Avesta has a parallel stanza of 3 x 8 arllables.

The first two Padas of the Gayatri are treated as a hemistich in the Samhita text, probably in imitation of the hemistich of the Annetable and the Tristubh; but there is no reason to believe that in the original text the second verse was more sharply divided from the third than from the first.

³ By far the commenced variation from the normal type is that in which the second syllable of the cadence is short (○ ○ ○ ≥). This occurs about as often in the first verse of Gäyntris as in the second and third combined.

agnim ile | puróhitam | - - - | 0 - 0 0 | yajñásya de | vám rtvíjam | - - 0 - | 0 - 0 0 | hótāram ra | tnadhátamam || - - - | 0 - 0 0 |

a. A comparatively rare but sufficiently definite variety of Gäyatri i differs from the normal type by having a decided trochaic rhythm in the cadence, while the lambic rhythm of the opening is more pronounced than usual; e.g.

tuám no ag | ne máhobhih | 0 - 0 - 0 - 0 |
pāhi viáva | ayā árāteh | - 0 - - | - 0 - - |
utá dvisó | mártiasya | 0 - 0 - | - 0 - 0 |

b. The Annetubh stanza consists of four cotosyllabic verses, divided into two hemistichs; e. g.

á yás te sar | pirásute | --- | 0 - 0 - |
ágne sám ús | ti dháysse | -- 0 - 0 - 0 - |
áigu dyumnám | utá śrávah | --- 0 - 0 - 0 |
á cittám már | tiesu dháh | --- 0 - 0 - 0 |

^{&#}x27;The only long wries of such trochaic Gayatria occurs in RV, viii,

^{2. 1-39.}The trochaid Gayatri is commonest in Mandalus I and viii, which taken together contain about two-thirds of the total number of examples in the RV.

The frequency of this metre is about one-third that of Gayatri in the RV, but in the post-Vadic period it has become the predominant metre. The Aventa has a parallel stanza of 4 × 8 syllables.

[.] Where the lambie cadence in the first verse has entirely dis-

appeared. This is the regular type of the Annatubh in the AV.

r. The Pankti stanza consists of five octosvilable verses! divided into two hemistichs of two and of three verses respectively. In origin it seems to be an extension of the Anustubh by the addition of a fifth verse. This is indicated by the fact that in hymns consisting entirely of Panktis the fifth verse of every stanza is (except in i. 81) regularly a refrain (e.g. in i. 80). The following is an example of a Pankti stanza:-

ittha hi soma in made | brahma cakara vardhanam | šávistha vajrinn ójasá prthívyá níh šašá áhím árcann anu svarajiam

d. In about fifty stanzas of the RV, the number of octosyllabic verses is increased to six and in about twenty others to seven, generally by adding a refrain of two verses to an Anustubh (e.g. viii. 47) or to a Pankti (e.g. x. 133, 1-3). The former is called Mahapankti (48), the latter Sakvari (56).

4. B. Verses of eleven syllables differ from those of eight in consisting of three members (the opening, the break, and the cadence). They also contrast with the latter in two other respects: their cadence is trochaio? (-----) and they have a caesura, which follows either the fourth " or the fifth syllable. The rhythm of the syllables preceding the caesura is prevailingly iambic, being \u2212-\u2212-\u2213 The rhythm of the break between the caesura and the cadence is regularly o o - or o o ! . Thus the scheme of

The only irregularity here is that the first syllable of the codence may be short when it coincides with the end of a word.

Identical with the opening of the octosyllable verse.

A The fourth syllable here is sometimes short; the fifth is then always long.

I The Avesta has a parallel stanza of 5 x 8 syllablus.

This appears to have been the original position of the caesara because the parallel verse of the Avesta has it there and never after the fifth avilable.

[&]quot; The first of these two syllables is sometimes, but rarely, long in the old hymns of the RV., still more rarely in the later hymns, and hardly ever in B.

the whole normal verse of eleven syllables is:

(a)
$$\times - \times -$$
, $\circ \circ - | - \circ - \times |$ or
(b) $\times - \times - \times$, $\circ \circ | - \circ - \times |$

- a. Apart from corruptions or only seeming irregularities (removable by restoration of vowels) several verses of this type have one syllable too many or too few; i.e.g. tā no vidvāṇaā, mānma vo | cetam adyā (12); tām im giro, jāna | yo nā pātnīh (10). Occasionally two syllables are wanting after the cacsura or the verse is too long by a trochee added at the end; e.g. tā ū vū no, [...] ma | hō yajatrāḥ (9); ayām sā hōtā, [....] yō dvijānmā (9); rāthabhīr yāta, rṣṭi | mādbhīr āšva | parṇaiḥ (13).
- 5. The Tristubh stanza, the commonest in the RV., tonsists of four verses of eleven syllables thivided into two hemistichs. The following are hemistichs of each type:
 - (a) anāgāstvó, aditi | tvé turāsah | imām yajūām, dadhatu | śrósamānāh |
 - (b) asmākam santu, bhūva nasya gópāh pibantu sómam, áva se no adya |
- at A few Trighnbh stanzas of only two verses (dvipada) occur (e.g. vii. 17). Much commoner are those of three verses (viral), the first two of which (as in the Ohyatri stanza) are treated in the Samhitä text as a homistich; the whole of some hymns is composed in this three-line metre (e.g. iii. 25). Fairly frequent are also Trighnbh stanzas of five verses divided into two hemistichs of two and three verses respectively. They are always of isolated occurrence, appearing generally at the end of (Trighubh) hymns, but never forming an online hymn.

¹ This anomaly also appears in the morre of later Vedic texts and of Pall poetry.

The extra syllable in such cases is perhaps due to the verse being inadvertently continued after a lifth syllable exesure as if it were a fourth syllable encoura.

³ The deficiency of a syllable in such cases may have been partly due to the similarity of the decasyllable Dvipada Viraj (8) with which Trietabh verses not infrequently interchange.

^{*} About two-fifths of the RV, are composed in this metre.

³ The Avesta has a parallel stanza of 4 x 11 syllables with caesara after the foorth syllable.

These are accounted Atjagati (52) or Sakvari stances by the ancient motricians when the fifth verse is a repetition of the fourth. If it is not a repetition it is treated in the Samhita text as a separate verse (as v. 41, 20; vi. 63, 11) and is called an ekapada by the metricians.

6. C. The verse of twelve syllables is probably an extension of the Tristubh verse by one syllable which gives the trochaic cadence of the latter an iambic character. The rhythm of the last five syllables is therefore - ○ - ○ ≥. The added syllable being the only point of difference, the scheme of the whole verse is:

- a. Several examples occur of this type of verse (like the Tristubh) having one, and occasionally two, syllables too many or too few; e.g. mā no martaya, ripave vājinivasā [13]; rēdaal ā, rada | tā gaņaāriyah [11]; sā drļhē nit, abhi tr | natti vājam ār | vatā (11); pihā sēmam, [v v] e | nā šatakrato (10).
- 7. The Jagati stanza, the third in order of frequency in the RV., consists of four verses of twelve syllables divided into two hemistichs. The following hemistich gives an example of each of the two types of verse:

anānudó, vṛṣabhō | dódhato vadháḥ | gambhīrā ṛṣvō, āsam | aṣṭakāviaḥ |

of There is an above syllable variety of the Jagail verse which is sufficiently definite in type to form entire stances in two hymns of the KV. (x, 77, 78). It has a casemia after both the lifth and the seventh syllable, its scheme being $\omega - \omega - \cdots = 0 - \cdots = 0$. The following hemistich is an example:

abhraprůso ná, vácá, prusa vásu havismanto ná, rajůä, vijanůsab |

 D. The verse of five syllables resembles the last five syllables of the Tristubh verse in rhythm, its commonest form being ∪ - ∪ - ⋈, and the one next to it in frequency - ∪ - ⋈ ⋈

It is probably not Indo-Iranian, because though a verse of 12 syllables occurs in the Avesta, it is there differently divided (7+5).

As the Gayatel verse is never normally found in combination with the Tristuble, but often with the Jagati verse, it seems likely that the immite influence of the Gayatel led to the creation of the Jagati, with which it could form a homogeneous combination.

That is, its first syllable is loss often long than short,

The Dvipada Viraj stanza 1 consists of four such verses divided into two hemistichs; 2 e. g.

pári prá dhanva | indráya soma | svädúr mitráya | püşņé bhágáya |

a. Owing to the identity of the cadence a Dvipada hemistich and infrequently interchanges in the same stanza with a Tristubh verse; * e. g.

priyā vo nāma huve turāņām ā yát tṛpān, maruto vāvasānāh

b. The mixture of Dyipada hemistichs with Tristubh verses led to an entire hymn (iv. 10) being composed in a peculiar metre consisting of three pentasyllabic verses followed by a Tristubh; e.g.

ágne tám adyá | ásvam ná stómaih | krátum ná bhadrám | hrdispřáam, rdhiá | mã * ta óhaih |

II. Mixed Stanzas.

9. The only different verses normally used in combination to form a stanza are the Gayatri and the Jagati. The principal metres thus formed are the following:

a, Stanzas of 28 syllables consisting of three verses, the

first two of which are treated as a hemistich:

* With this metre compare the defective Tristubh verse of ten

This stanza is somewhat rare, occurring in the RV, not much more than a hundred times.

^{*} The otherwise universal rule that the end of a verse must coincide with the end of a word is three times ignored in this metre (at the end of the first and third verses).

This interchange occurs especially in RV. vii. 24 and 56.

Here the verb, though the first word of the verse (App. III, 19 8), is unaccented. This is because the end of the first and the third verse in this metre has a tendency to be treated like a cassure rather than a division of the stanza. Cp. note 2.

^{*} These three verses are treated as a homistich in the Samhita text.

† The verb is accented because in the Samhita text it is treated as the first word of a separate verse.

1. Uspih : 8812; a.g.

ágne vája | sya gómatah | ísánah sa | haso yaho || asmé dhehi, jätave | do máhi árávah ||

2. Puraușnih: 1288; e.g.

apsú antár, amŕtam | apsú bhesajám | apám utá | prášastaye | déva bhava | ta väjínah ||

3. Kakubh: 8 12 8; e.g.

ádhā hi in | dra girvaņah | úpa tvā kāmān, mahāḥ | sasrimāhe || udēva yān | ts udābhiḥ ||

b. Stanzas of 36 syllables consisting of four verses divided into two hemistichs: Brhatl 8 S 12 S; e.g.

śścibhir naḥ | śacivasū | dévā náktaṃ | daśasyatam | má vāṃ rātír, úpa da | sat kádā caná | asmád rātíḥ | kádā caná |

c. Stanzas of 40 syllables consisting of four verses divided into two hemistichs: Satobrhatī 12 8 13 8; e.g.

> jánāso agnim, dadhi re sahovídham | havismanto | vidhema të | sá tvám no adyá, sumá | ná íhávitá | bhávā vāje | su santia |

- 10. There are besides two much longer mixed stanzas of seven verses, each of which is split up into three divisions of three, two, and two verses respectively in the Samhita text.
- a. Stanzas of 80 syllables consisting of six Gayatri verses and one Jagati: Atišakvarī 888, 88, 128; 2 e.g.

These are the composition of a very few individual posts.
Only about ten examples of this metre occur in the RV.

susumā yā | tam ádrībhīḥ |
góśrītā mat | sarā imė |
sómāso mat | sarā imė |
å rājānā | divispṛšā |
asmatrā gan | tam úpa naḥ ||
imė vām mitrā, -varu | nā gávāširaḥ |
sómāh śukrā | gávāširaḥ ||

b. Stanzas of 68 syllables consisting of four Gäyatri and three Jagati verses: Atyaşti¹ 12 12 8, 8 8, 12 8; e.g.

sá no nédistham, dádrá | ana a bhara |
agne devébhih, sáca | nah sucetúna |
mahó ráyáh | sucetúna ||
máhí savi | stha nas krdhi |
samcákse bhu | jé asiái ||
máhí stotřbhyo, magha | van suvíriam |
máthír ugró | ná sávasa

a. Besides the above mixed metres various other but isolated combinations of Gayairi and Jagati verses occur in the RV., chiefly in single hymna. There are atmuss of this kind containing 20 syllables (12 8); 2 32 syllables (12 8, 12); 2 40 syllables (12 12, 88); 4 44 syllables (12 12, 12 8); 59 syllables (12 12, 12 8 8).

8. 1. Tristably verses are quite often interspersed in Jagati stanzas, but never in such a way as to form a fixed type of stanza or to make it doubtful whether a hymn is a Jagati one. This practice probably arose from the interchange of entire Tristubh and Jagati stanzas in the same hymn bringing about a similar mixture within a single stanza. 2. An occasional licence is the combination of a Tristubh with a Gâyatri verse in the same stanza. This combination appears as a regular mixed stanza (11 & 8 8) in one entire hymn (EV. x. 22).*
3. The combination of a Tristubh verse with a Dvipada Virāj hemistich has already been noted (8 a).

This is the only comparatively common long metre (of more than is syllables) in the RV., where more than 80 Atyasti stanzas occur, 2 RV. viii. 29. 2 RV. (x. 110. 29. 3 RV. x. 98.

But the intrusion of Jagati verses in a Tristabh hymn is exceptional in the RV., though very common in the AV. and later.

^{*} Except stauras 7 and 15, which are pure Ametable and Tristuble respectively.

III. Strophic Stanzas.

- 11. Two or three stanzas are often found strophically combined in the RV., forming couplets or triplets.
- A. Three simple stanzas (called trea) in the same metre are often thus connected. Gayatri triplets are the commonest; less usual are Usuih, Brhati, or Pankti triplets; while Tristubh triplets are rare. A hymn consisting of several triplets often concludes with an additional stanza in a different metre.
- a. It is a typical practice to conclude a hymn composed in one metre with a stanza in another. A Tristubh stanza at the end of a Jagatt hymn is the commonest; a final Acceptabh stanza in Gayatri hymns is much less usual; but all the commoner metres are to some extent thus employed except the Gayatri, which is never used in this way.
- B. Two mixed stanzas in different metres are often combined, the RV. containing about 250 such strophes. This doubly mixed strophic metre, called Pragatha, is of two main types:
- 1. The Kakubha Pragatha is much the loss common kind of strophe, occurring only slightly more than fifty times in the RV. It is formed by the combination of a Kakubh with a Satobrhati stanza: 8 12, 8 + 12 8, 12 8; e.g.

ā no āšvā | vad ašvinā |
vartir yāsistam, madhu | pātamā narā ||
gomad dasrā | hiraņyavat ||
suprāvargām, suviryam | susthu vāriam |
ānādhṛṣṭam | rakṣasvinā ||
asminn ā vām, āyāne | vājinivasū |
višvā vāmā | ni dhīmahi ||

 The Barhata Pragatha is a common strophe, occurring nearly two hundred times in the EV. It is formed by the combination of a Brhatt with a Satobrhatt stanza: 88, 128+ 128, 128; e.g. dyumni văm | stomo aśvinā |
krivir ná sé | ka á gatam ||
mādhvaḥ sutásya, sá di | ví priyó nárā |
pātám gaurāv | ivórine ||
pibatam gharmám, mádhu | mantam aśvinā |
ā barhiḥ sī | datam narā ||
tā mahdasānā, mánu | şo duroṇā ā |
ni pātam vé | dasā váyaḥ ||

a. Of these two types there are many variations occurring in individual hymns, chiefly by the addition of one (8), two (12.8), three (12.8.8), or once (vil. 96, 1-3) even four verses (12.12.8.8).

APPENDIX III

THE VEDIC ACCENT.

 The accent is marked in all the texts of the four Vedas as well as in two Brahmanas, the Taitirrya (including its Āranyaka) and the Satapatha (including the Brhadāranyaka)

Upanisad).

The Vedic, like the ancient Greek, accent was a musical. one, depending mainly on pitch, as is indicated both by its not affecting the rhythm of metre and by the name of the chief tone, udatta raised. That such was its nature is, moreover, shown by the account given of it by the ancient native phoneticians. Three degrees of pitch are to be distinguished, the high, properly represented by the udatta, the middle by the svarita (sounded), and the low by the anudatta (not raised). But in the Rigyeda the Udatta, the rising accent, has secondarily acquired a middle pitch. lower than the initial pitch of the Svarita. The Svarita is a falling accent representing the descent from the Udatta pitch to tonelessness. In the Rigyeda it rises slightly above Udatta pitch before descending; here therefore it has something of the nature of a circumflex. It is in reality always an enclitic accent following an Udatta, though it assumes the appearance of an independent accent when the preceding Udatta is lost by the suphonic change of a vowel into the corresponding semivowel (as in kvà = kuà), the latter case it is called the independent Svarita. The Anudatta is the low tone of the syllables preceding an Hdatta.

2. There are four different methods of marking the accent in Vedic texts. The system of the Bigveds, which is followed by the Atharvayeds, the Vajasaneyi Samhita, the Taittirtya Samhita and Brahmana, is peculiar in not marking the principal accent at all. This seems to be due to the fact that in the RV, the pitch of the Udatta is intermediate between the other two tones. Hence the preceding Amidatta, as having a low pitch, is indicated below the syllable bearing it by a horizontal stroke, while the following Svarita, which at first rises to a slightly higher pitch and then falls, is indicated above the syllable bearing it by a vertical stroke; e.g. agninā = agninā; viryam = vīryam (for vīriam). Successive Udattas at the beginning of a hemistich are indicated by the absence of all marks till the enclitic Svarita which follows the last of them or till the Anudatta which (ousting the enclitic Svarita) follows the last of them as a preparation for another Udatta (or for an independent Svarita); e.g. tāv ā yātam = tāv ā yātam; tavet tat satyam = távét tát satyám. On the other hand, all successive unaccented syllables at the beginning of a hemistich are marked with the Anudatta; e.g. vaisvanaram =vaiávānarám. But all the unaccented syllables following a Syarita remain unmarked till that which immediately precedes an Udatta (or independent Svarita); e.g. imam mė gange yamune sarasvatį šutudri = imam me gange yamune sarasyati śútudri.

a. Since a hemistich of two or more Padas is treated as a unit that consists of an unbroken chain of accented and unaccented syllables, and ignores the division into Padas, the marking of the preceding Anndatts and the following Svarita is not limited to the word in which the Udatts occurs, but extends to the contiguous words not only of the same, but of the succeeding Pada; s. g. agnina rayim asnavat posam eya divo-nive = agnina rayim asnavat

6.8

1819

^{*} Here the encitie Svarits, which would rest on the syllable as if the following syllable were unaccented, is mated by the Anudatta, which is required to indicate that the following syllable tyam has the Udatta.

pósam evá divé-dive; sa náh pitevá súnave (gné súpáyano bhava = sá nah pitéva súnávé 'gne súpáyanó bhava.'

- b. When an independent Svarita immediately precedes an Udatta, it is accompanied by the sign of the numeral 1 if the vowel is short and by 3 if it is long, the figure being marked with both the Svarita and the Anudatta; e.g. apsylantah = apsú antáh; rāyo 3 vanih = rāyò 'vánih (cp. 17, 3).
- 3. Both the Maitrayant and the Kathaka Samhilas agree in marking the Udatta with a vertical stroke above (like the Svarita in the RV.), thereby seeming to indicate that here the Udatta rose to the highest pitch; e.g. agnina. But they differ in their method of marking the Svarita. The Maitrayant indicates the independent Svarita by a curve below; e.g. vîryam = vîryam; but the dependent Svarita by a horizontal stroke crossing the middle of the syllable or by three vertical strokes above it; while the Kathaka marks the independent Svarita by a curve below only if an unaccented syllable follows, but by a hook below if the following syllable is accented; e.g. viryam = viryam badhnati; viryam = viryam vyacaste; the dependent Svarita has a det below the accented syllable." The Amadatta is marked in both these Samhitäs with a horizontal stroke below (as in the RV.).
- In the Samaveda the figures 1, 2, 3 are written above the accented syllable to mark the Udatta, the Svarita, and

In the Pada text on the other hand, each word has its own accent only, unaffected by souriguous words. The two above hamistichs there read as follows: agnina rayim asnayat posam ava diver dive; sah nah pita fiva sanaya agne sa fupayanah bhays.

As in kva = kúa, viryam = viriam,

In L v. Schroeder's editions of these two Sambitas the Edatta

and the independent Svarita only are marked,

When the text of any of the Samhitas is transliterated in Roman characters, the Anudatta and the enclitic Syarita are emitted as unnecessary because the Udatta itself is marked with the sign of the scute; thus again becomes again a.

the Anadatta respectively as representing three degrees of pitch; e.g. barhişi = barhişi (barhişi). The figure 2 is, however, also used to indicate the Udatta when there is no following Svarita; e.g. girā = girā (girā). When there are two successive Udattas, the second is not marked, but the following Svarita has 2r written above; e.g. dvişo martyasya (dvişo martyasya). The independent Svarita is also marked with 2r, the preceding Anadatta being indicated by 3k; e.g. tanvā = tanvā.

- 5. The Satapatha Brahmana marks the Udatta only. It does so by means of a horizontal stroke below (like the Aundatta of the RV.); e.g. purusah = purusah. Of two or more successive Udattas only the last is marked; e.g. agnir hi vai dhur atha = aguir hi vai dhur atha. An independent Svarita is thrown back on the preceding syllable in the form of an Udatta; e.g. manusyesu = manusyesu for manusyèsu. The Svarita produced by change to a semivowel, by contraction, or the elision of initial a is similarly treated; e.g. evaitad = évaitad for evaitad (= eva etad).
- 6. Accent of single words. Every Vedic word is, as a rule, accented and has one main accent only. In the original text of the RV, the only main accent was the Udatta which, as Comparative Philology shows, generally rests on the same syllable as it did in the Indo-European period; e.g. ta-ta-s stretched, Gk. τα-τό-ς; jánu n. knet, Gk. γόνυ; ά-dṛṣ-at, Gk. ε-δρακ-ε; bhāra-ta, Gk. φέρε-τε. But in the written text of the RV, the Svarita appears to be the main accent in some words. It then always follows a y or v which represents original i or u with Udatia; e.g. rathyàm

But preparers (bharamanas) by the secondary Greek law of accentuation which prevents the scale from going back farther than the third syllable from the sad of a word.

= rathiam; svar = suar n. light; tanvam = tanuam.3 Here the original vowel with its Udatta must be restored in pronunciation except in a very few late passages.

- 7. Double Accent. One form of dative infinitive and two types of syntactical compounds have a double accent. The infinitive in tavai, of which numerous examples occur both in the Samhitās and the Brāhmaṇas, accents both the first and the last syllable; e.g. é-tavái to go; ápa-bhartavái to take accay. Compounds both members of which are duals in form (186 A 1), or in which the first member has a genitive ending (187 A 6 a), accent bothmembers; e.g. mitrā-vāruṇā Mitra and Varnṣa; bṛhas-pāti lord of proyer. In B. a double accent also appears in the particle vāvā.
- 8. Lack of Accent. Some words never have an accent; others lose it under certain conditions.
 - A. Always enclitic are:
- a. all cases of the pronouns on a he, she, it, tva another, same some; and the following forms of the personal pronouns of the first and second persons: mā, tvā; me, te; nau, vām; nas, vas (109 a), and of the demonstrative stems i and sa: im (111 n. 3) and sīm (180).
- b. The particles ca and, n also, vā or, iva like, gha, ha just, cid at all, bhala indeed, samaha somehow, sma just, indeed, svid probably.

B. Liable to loss of accent according to syntactical

position are:

- a, vocatives, unless beginning the sentence or Pada.
- b. finite verbs in principal clauses, unless beginning the sentence or Pada.
- c. oblique cases of the pronoun a, if unemphatic (replacing a preceding substantive) and not beginning the sentence or Pada; e.g. asya janimani his (Agni's) births (but asya usasah of that dawn).

Ace, of tanti body.

¹ Acc. of rathi chariceer,

In the TS, always written suvar.

d. yatha as almost invariably when, in the sense of ivalike, it occurs at the end of a Pada; e.g. tayavo yatha like thieves: kam indeed always when following nu, su, hi.

1. Accentuation of Nominal Stems.

9. The most important points to be noted here are the following:-

A. Primary Suffixes:

a. Stems in as accent the root if neut, action nouns, but the suffix if mase, agent nouns; e.g. ap-as n. work, but ap-as active. The same substantive here, without change of meaning, sometimes varies the accent with the gender;

e. g. raks-as n., raks-as m. demon.

b. Stems formed with the superlative suffix is the accent the root; e.g. yaiis the sacrificing best. The only exceptions are jyes the class (but jyes the greates) and kanis the youngest (but kanis the smallest). When the stem is compounded with a preposition, the latter is accented; e.g. a-gamis the coming best.

e. Stems formed with the comparative suffix iyams invariably accent the root; e.g., jav-iyams swifter. When the stem is compounded with a proposition, the latter is accented; e.g., prati-cyaviyams pressing closer against.

d, Stoms formed with tar generally accent the root when the meaning is participial, but the suffix when it is purely nominal; e.g. da-tar giving (with acc.), but da-tar giver.

c. Stems in man when (neat.) action noms, accent the root, but when (masc.) agent nouns the suffix; e.g. kar-man n. action, but dar-man, m. breaker. The same substantive here varies, in several instances, in accent with the meaning and gender (cp. above, 9 A a); e.g. brahman n. prayer, brahman m. one who prays; sad-man, n. scal, sad-man, m. sitter. When these stems are compounded with prepositions,

These two exceptions arise simply from the desire to distinguish the two meanings of each of them. See below 16, footnote 2).

the latter are nearly always accented; e.g. prá-bharman, n. presentation.

B. Secondary Sumxes:

- a. Stems in in always accent the suffix; e.g. aśv-in possessing horses.
- b. Stems in tama, if superlatives, hardly ever accent the suffix (except puru-tama very many, ut-tama highest, šašvattama most frequent), but if ordinals, the final syllable of the suffix; e. g. šata-tama hundredth.
- c. Stems in ma, whether superlatives or ordinals, regularly accent the suffix; e.g. adha-mā lowest; asta-mā eighth; except anta-ma next (but twice anta-mā).

2. Accentuation of Compounds.

- 10. Stated generally, the rule is that iteratives, possessives. and governing compounds accent the first member, while determinatives (Karmadharayas and Tatpurusas), and regularly formed co-ordinatives accent the last member (usually on its final syllable). Simple words on becoming members of compounds generally retain their original accent. Some. however, always change it: thus visva regularly becomes viśva: others do so in certain combinations only: thus purva prior becomes purva in purva-citti f. first thought, půrvá-piti f. first draught, půrvá-hůti first invocation : medha sucrifice shifts its accent in medha-pati lord of sacrifice and medha-sati f. reception of the sacrifice, and virá hero in puru-vira possessed of many men and su-vira heroic. An adjective compound may shift its accent from one member to another on becoming a substantive or a proper name ; e. g. su-krta well done, but su-krta, n. good deed ; á-raya niggardly, but a-raya m. name of a demon.
- a. Iteratives accent the first member only, the two words being separated by Avagraha in the Pada text, like the members of other compounds; e.g. ahar-ahar day after day; yad-yad whatever; yathā-yathā as in each case; adya-adya, śvah-śvah on each to-day, on each to-morrow; pra-pra forth and again; piba-piba drink again and again.

b. In governing compounds the first member, when it is a verbal noun (except siksā-narā helping men) is invariably accented; e.g. trasā-dasyu terrifying foes, name of a man; present or acrist participles place the accent, wherever it may have been originally, on their final syllable; e.g. tarād-dveṣas ocercoming (tārat) foes. When the first member is a preposition, either that word is accented, or the final syllable of the compound if it ends in a; e.g. abhi-dyu directed to heaven, but adhas-pad-a under the feet; anu-kāmā according to wish (kāma).

c. Bahuvrthis normally accent their first member; e.g. rāja-putra having kings as sons (but rāja-putrā son of a king); viśváto-mukha facing in all directions; sahā-vatsa accompanied by her calf.

- a. But about one-eighth of all Bahuvrihis account the second member (chiefly on the final syllable). This is commonly the case when the first member is a dissyllable adjective ending in i or u, invariably in the RV, when it is pure or bahu mach; e.g. tuvi-dyumna having great strongt; yithurkratu having great strongt; pure-putra having mach food. This also is the regular accontitution when the first member is dvi (no, tri form, due il, on sell, or the privative particle a or an; 2 s.g. dvi-pad hos-footed, tri-nabhi having three naves, dur-manman ill-disposed, su-bhaga well-endowed, a-dant toothless, a-phala lacking fruit (phála).
- d. Determinatives accent the final member (chiefly on the final syllable).
- I. Ordinary Karmadharayas accent the final syllable; e.g. prathama-ja first-born, pratur-yuj carly yoked, mahidhaná great spoil. But when the second member ends in i, man, van, or is a gerandive (used as a n. substantive), the penultimate syllable is accented; e.g. dur-gfbhi hard to hold; su-tarman crossing well; raghu-pátvan swift-figing; purva-péya, n. precedence in drinking.

The later Samnitas tend to follow the general rule; a.g. puru-naman (SV.) many-samos.

Bahavrihis formed with a or an are alumnt invariably accented on the final syllable as a distinction from Karmadharayas (which normally accent the first syllable, as a-manusa informati); o.g. a-matri strangelos.

- a The first member is, however, accented under the following conditions. It is generally accented when it is an adverbial word qualifying a past participle in to or no or a verbal some in it; v. g. der-hits faring it; sadhs-stull joint pushs. It is almost invariably accented when it is the privitive particle a or an compounded with a participle, adjective, or substantive; v. g. an adant as satisfy. 4-vidvama sot knowing, 4-kris not done, 4-tandra momental, 4-knowing as a large of the privative particle is also regularly accented, when it negatives a compound; e.g. an adva-da not yield a know, an agnificant bands over with jice.
- 2 Ordinary Tatpurusas accent the final syllable; e.g. gotra-bhid opening the cow-pens, agnim-indha fire-kindling, bhadra-vādin uttering auspicious cries; uda-megha shower of water. But when the second member is an agent noun in ana, an action noun in ya, or an adjective in i, or van, the radical syllable of that member is accented; e.g. devamādana exhilarating the gods; ahi-hatya n. slaughter of the drugon; pathi-rākṣi protecting the road; soma-pāvan Soma-drinking.
- is The first member is, however, accented when it is dependent on past passive participles in the and has or on action notices in the e.g. deva-hits ordained by the gods, dhann-said acquisition of scould. It is usually also secented, if dependent on pair look; e.g. grha-pair look of the louist. Some of those non-pounds with pair accent the second member with its original accent; some others in the later Sauthitas, conforming to the general rule, account it on the final syllable; thus apaara-pair (AV.) look of the Apanusas, char-pair (MS.) look of day, andi-pair (VS.) look of evers.
- 6. A cortain number of Tutpurusas of syntactical origin, having a genitive case-ending in the first member nearly always followed by path, are doubly accented; e.g. tapas-path tool of proper. Other are apam-napat sen of meters, mark-sames (for naram-sames) process of men, samal-same boy's had, name of a man. The analogy of these is followed by some Tatpurusas without case-ending in the first member same process for of might; tank-napat som of himself (tank); of same process of seas.

[!] Sometimes, however, the first syllable of the second member is accented; a.g. a-jara sengine; a-mitra m. susses (non-friend) mitra); a-mfta imported from mrta.

c. Regularly formed Dvandvas (186 A 2. 3) accent the final syllable of the stem irrespective of the original secent of the last member; e.g. ajāváyah m. pl. goats and sheep; aho-rātrāni days and nights; iṣṭā-pūrtám n. what is sacrificed and presented.

a. The very rare advertial Dyandyss account the first member;

abar-divi 1 day by day, sayam-pratar scoung and morning.

8. Co-ordinatives consisting of the names of two deities, each dual in form (Devata-dvandvas), accent both members; e.g. indra-varuna indra and Varuna; anya-mass San and Moon. A few others, formed of words that are not the names of deities, are similarly accented; e.g. turvasa-yadu Turvasa and Tuda; matara-pitara matara and father.

3. Accent in Declension.

11. a. The vocative, when accented at all (18), invariably has the acute on the first syllable; e.g. pitar (N. pita), déva (N. devá-s). The regular vocative of dyú (dyáv) is dyáus. i.e. díaus (which irregularly retains the s of the nom: cp. Gk. Zεῦ), but the accent of the N., dyáus,

usually appears instead.

b. In the a and ā declensions the accent remains on the same syllable throughout (except the vocative); e.g. devā-s, devā-sya, devā-nām. This rule includes monosyllable stems, pronouns, the numeral dvā, and radical ā stems; e.g. from mā: māyā, mā-byam, māy-i: from tā: tā-sya, tē-sām, tā-bhis; from dvā: dvā-bhyam, dvāyos; from jā m. f. offspring: jā-bhyam, jā-bhis, jā-bhyas, jā-su.

n. The curdinal stems in a, panca, nava, data (and its compounds) shift the account to the vowel before the endings bhis, bhyse, au, and to the gen, ending nam; sata shifts it to all the endings and sapta to the gen, ending; e.g. panca-bhis, panca-ram; sapta-bhis, sapta-bhys, sata-bhys, sata-ram.

This is perhaps rather an irregular iterative in which the first member is repeated by a synonym.

Occasionally these compounds become assimilated to the normal type by leaing the accent and even the inflexion of the first member; e.g. indragof Infra and April indra-vaya Judra and Vaya.

- 8. The pronoun a thin, though sometimes conforming to this rule (e. g. 4-smai, 4-sys, 4-bhis); is usually treated like monosyllables not ending in a ; e. g. a-sys, a-sam, a-sam.
- c. When the final syllable of the stem is accented, the acute is liable to shift (except in the a declension) to the endings in the weak cases.
- 1. In monosyllabic stems (except those ending in a) this is the rule; e.g. dhi f. thought; dhiy-a, dhi-bhis, dhi-năm; bhu f. earth: bhuv-as, bhuv-os; nau f. ship: nav-a, nau-bhis, nau-su (Ck vav-oi); dant, m. tooth: dat-a, dad-bhis.

There are about a decan exceptions to this rule: go can, dyo aby; af min, atf why; kwim word; tin exception, rin joy, vin wood; vi m. bird; vip rod; svar hight; e.g. giv-a, giv-am, go-bhis; dyav-i, dyd-bhis; nar-e, nr-bhis, nr-su (but nar-am and nr-nam); air-bhis; kwim-i; tin-a (also tan-a); ran-e, ram-su; vam-su (but van-am); vi-bhis, vi-bhyas (but vi-nam); G. vip-ae; sur-as (but sur-e); also the dative infinitives badh-e to press and van-e to convey. The irregular ascentuation of a few other monesyllable stems is due to their being reduced forms of dissyllables; these are dru med (daru), and remain (sanu), svan dog (ik. sase), yun (weak stem of yuvan yelog); e.g. dru-aa; sun-su, suns, sva-bhis; yun-a.

- 2. When the final accented syllable loses its vowel either by syncope or change to a semivowel, the acute is thrown forward on a vowel ending; e.g. from mahiman greatness: mahimna; agni fire: agny-os; dhenù cow: dhenv-a; vadhù bride: vadhv-ai (AV.); pitf father: pitr-a.
- a. Polysyllabic stems in f, û, f and, in the RV., usually those is f, throw the scute on the ending of the gen. pl. slee, even though the final rowel of the stem here retains its syllabic character; w.g. agni-nam, dhenù-nam, dhif-nam, bahvi-nam (cp. 11 b u).
- 3. Present participles in at and ant throw the acute forward on vowel endings in the weak cases; e.g. tud-ant striking: tudat-a (but tudad-bhis). This rule is also

At the end of a compound a monosyllabic atom loses this accentuation; e.g. su-dhf wise, sudhf-nam-

followed by the old participles mahant great and brhant

lofty; o.g. mahat-å (but mahad-bhis).

4. In the RV, derivatives formed with accented -and throw the scute forward on vowel endings in the weak cases when the final syllable contracts to ic or ûc; e.g. praty-áño turned towards: pratic-á(but pratyák-şu); anv-áño/ollowing; anûc-ás; but praño/orward: prac-i.¹

4. Verbal Accent.

12. a. The augment invariably bears the acute, if the verb is accented at all (19); e.g. impf. á-bhavat; aor. á-bhūt; plup. á-jagan; cond. á-bharisyat. The accentuation of the forms in which the augment is dropped (used also as injunctives) is as follows. The imperfect accents the same syllable as the present; e.g. bhārat; bhārati; bhināt: bhinātti. The pluperfect accents the root; e.g. cākān (3. s.); namāmas, tastāmbhat; tatānanta; but in the 3. pl. also occur cakṛpānta, dádhṛṣanta.

The acrist is variously treated. The s and the is forms accent the root; e.g. vám-s-i (van win); šáms-iş-am. The root acrist (including the passive form) accents the radical vowel in the sing, active, but the endings elsewhere; e.g. 3, s. várk (√vṛl); pass. véd-i; 2, s. mid. nut-thás. The acrists formed with -a² or -sa accent those syllables; e.g. ruhām, vidāt; budhānta; dhuk-ṣá-nta. The reduplicated acrist accents either the reduplicated syllable; e.g. ninašas, piparat, jijanan; or the root, as piparat, šišnāthat.

b. Present System. The accent in the a conjugation (as in the a declension) remains on the same syllable throughout: on the radical syllable in verbs of the first and fourth classes, on the affix in the sixth (125); e.g. bhávati; náhyati; tudáti.

In the other Sambilas, however, the accent is generally retained on the stem; thus the AV. forms the f. stem pratio-i (RV. pratic-i).

I In the a soriet several forms are found accenting the root; e.g. tranta, sadatam, sanat.

The graded conjugation accents the stem in the strong forms (126), but the endings in the weak forms. In the strong forms the radical syllable is accented in the second! and the reduplicative syllable in the third class;" and the stem affix in the fifth, eighth, seventh, and ninth classes; o. g. ás-ti, ás-a-t, ás-tu; bibhar-ti; kr-nó-ti, kr-náv-a-t; man-áv-a-te; yu-ná-j-mi, yu-náj-a-t; grh-ná-ti, grbhua-s (2. a. sub.); but ad-dhi, ad-yur; bi-bhr-masi; kr-nv-é, kr-nu-hí; van-u-yama, van-v-antu: vunk-té, yunk-svá; gr-nī-mási, gr-nī-hí.

c. Perfect. The strong forms (the sing. 1, 2, 3, ind. and 3. impv. act. and the whole subjunctive) accent the radical syllable, the weak forms (ep. 140) the endings; e. g. cakara; jabhar-a-t, vavárt-a-tí; mumók-tu; but cakr-úr, cakrmahe; vavrt-yam; mu-mug-dhi. The participle accents the suffix; e.g. cakr-vams, cakr-ana.

d. Aorist. The injunctive is identical in accentuation (as well as form) with the unaugmented indicative (see above, 12).

a. The root nor, assents the radical syllable in the subjunctive u.g. kir-a-t, arav-a-tas, gam-a-nti, bhaj-a-te; but the endings in the opt, and impy, (except the S. x. act.)," and the anfitz in the participle; * e. z. as-yam, as-i-mahi ; kr-ahi, ga-tam, bhi-ta but 3. s. sro-tu), kr-svá; bhid-ant, budh-ana.

Occasionally the 2. s. impv. mid. accounts the root in other verbe

also; c.g. yak-sva (/yaj).

Four verbs, of only, mad exhibitely, yo repercels, his newspars, account the radical syllable; a. g. juho-ti. A few other verbs do so in halated forms; e.g. bibbar-ti (usually bibbar-ti).

In the third class the reduplicative syllable is acconted in the weak forms also if the ending begins with a vowel; e.g. bi-bhr-ati.

* In the second, tifth, seventh, eighth, and ninth classes the final syllable of the 8, pl. mid, is irregularly accounted in ribats (beside ribate); krav-sté, vrnv-até, sprnv-até, tanv-até, manv-até; bhuñj-até (beside bhudl-ate); pun-até, rin-até.

The radical syllable (in its strong form) is also in several instances accented in the 2 pl. act.; a.g. kir-ta baside kr-ta; gin-ta, gin-tana

boulds gn-til. &c.

* In the mid. part, the root is, in several instances, accented; e.g. dyút-ina.

Lilleven veries of this class accent the root throughout: as and id praise, ir set in mation, in rule, onky see, taky fashion, tra protect, nime wiss, was user, at his, an bring firth; n. g. saye, &c.

8. The a and is nor, accent the root in the subjunctive but the entings in the opt, and impe,; e.g. yák-a-a-t (√ya), bódh-is-a-t; but bhak-s-iyá (√bha)), dhuk-s-i-máhi (√duh), edh-is-i-yá (ΔV.): avid-dhi, avis-tám.[†] The a nor, accents the root in the act, part, but nearly always the suffix in the irregularly formed middle; [†] e.g. dák-s-ant (√dah), aron-s-áná.

y. The a agrist accents the thematic vowel throughout the moods (as in the unaugmented indicative) and the part,; e.g. vidat;

vidéyam ; ruhá-tam ; trpánt, guhá-mana.

8. The sa nor, accents the suffix in the impv.: dhak-sa-sva (/dah). The same accentuation would no doubt appear in the subjunctive and optative, but no examples of those moods (nor of the part.) occur.

4. In the reduplicated nor, the treatment of the subj. and opt. is uncertain because no normally formed accounted example occurs; but

in the impr. the ending is accouted; o g jigr-tam, didhr-ta.*

e. Future. The accent in all forms of this tense remains on the suffix syá or i-syá; e.g. e-syámi; kar-i-syáti; kar-isyánt.

f. Secondary conjugations. As all these (except the primary intensive) belong to the a conjugation, they accent the same syllable throughout. The causative (168) accents the penultimate syllable of the stem, as krodh-åya-ti enrages; the passive, the secondary intensive (172), and the denominative (175), accent the suffix yå; e.g. pan-yà-te is admired; rorih-yà-te lieks repeatedly; gopā-yà-nti they protect. The desiderative (169) accents the reduplicative syllable; e.g. pi-pri-şa-ti desires to please. The primary intensive agrees with the third conjugational class in accenting the reduplicative syllable in the strong forms, but the endings with initial consonant in the weak forms of the indic act.; e.g. jó-havi-ti, jar-bhy-tás, but 3. pl. várvrt-ati; in the midlind the reduplicative syllable is more frequently accented

Neither the is nor the mis sor, forms participles.

4 No participial form occurs in this nor.

¹ No accented impy, forms occur in the a nor. In the signor, the only accented modal form occurring is the impy,; ya-sis-tam.

But the root is secented, in several imperatives and participles, y. 2, sans, addatum, khysta; addant, datamana.

A cortain number of unmistakable denominatives, however, have the causative accent ; e.g. mantra-yati tales counsel (mantra).

than not; e.g. té-tik-te, less often ne-nik-té. In the subj. and part, the reduplicative syllable is regularly accented; e.g. jáñ-ghan-a-t, jáñ-ghan-a-nta; cékit-at, cékit-ana. The accentuation of the imporative was probably the same as that of the present reduplicating class (12b); but the only accented forms occurring are in the 2. s. act., as jägr-hí, carkr-tát.

5. Accent of Nominal Verb Forms.

13. a. Tense Participles when compounded with one or more prepositions retain their original accent (while the prepositions lose theirs); e.g. apa-gachant going away, vi-pra-yantah advancing, pary-a-vivrtsan wishing to turn round; apa-gacha-mana; apa-jaganvams, apa-jagm-ana.

a. A single proposition, or the first of two, not infrequently becomes separated by the interposition of one or more words or by being placed after the participle. It is then treated as independent and recovers its accent; e.g. apa dribani dardrat burship strongholds sounder; a ca para os pathibhis caratum sendering bliker and thicker on his palks; madhu bibbrata opa tronging securious man; pre vayam of-jihanah strong up to a branch; avasrjinn upa becoming of constantally an immediately preceding preposition is not compounded with the participle and is then also accented; e.g. abhi dakent burning account; vi vidvan i discriminating; abhi s-carantal approaching.

b. On the other hand, the past passive participle, when compounded with one or more prepositions, generally loses its accent; e.g. ni-hita deposited. When there are two prepositions the first remains unaccented; e.g. sam-ā-kṛtam accumulated; or the first may be separated and independently accented; e.g. prá yát samudrá āhitaḥ when dispatched forth to the ocean.

¹ No accounted form of the optative occurs,

^{*} Probably in distinction from vividvan simple resimplicated participle of vid And.

^{*} Which itself is always accented on the final syllable; s.g. ga-ta, pati-ta, chin-na.

In several instances, however, it retains its accent; e.g. nie-krts prepared. This is the case with prepositions that are not used independently.

- c. Gorundives in ya (or tya) and tva accent the root; e.g. caka-ya to be seen, ari-t-ya to be heard, carkf-tya to be praised, vak-tva to be said; those in ayya, enya, aniya accent the penultimate of the sulfix; e.g. pan-ayya to be admired, iks-enya worthy to be seen, upa-jiv-aniya (AV.) to be subsisted on; while those in tavya accent the final syllable; jan-i-tavyà (AV.) to be born. When compounded with prepositions (here always inseparable) gerundives nearly always retain the accent of the simple form; e.g. paricaks-ya to be despised; abhy-a-yamsénya to be drawn near; a-mantraniya (AV.) to be addressed.
- 14. Infinitives are as a rule accented like ordinary cases that would be formed from the same stem.
- a. Dative infinitives from stems in 1, ti, as, van accent the suffix; those in dhyai, the preceding thematic a; and those formed from the root, the ending; e.g. dršay-e to see, pītāy-e to drink, caras-e¹ to move, dā-van-e² to give, tur-van-e³ to overcome; iy-a-dhyai to go; drš-é to see.
- a. When radical infinitives are compounded with prepositions the root is accented; e.g. sum-idh-e to kindle, abhi-pra-cike-e to are.
- b. The dative infinitive from stems in man, the accessative and the abl. gen. from roots, and all from stems in tu accent the root; e.g. då-man-e to give; subh-am to shine, å-såd-am to sit down; ava-påd-as to fall down; då-tum to give, gån-tos to go, bhar-tav-e to bear, gån-tav-åi to go.
- a When compounded, infinitives from tu atoms accent the preparation; e.g. sam-kar-tum to collect; ni-dha-tos to put down; api-dha-

In these the root is sometimes accented, as cake-as-s to see

This infinitive also appears with independently accented prepositions; pré dăvâne and abhi pré dăvâne.

The root is once accented in dhur-vane to inter.

^{*} In these the root is sometimes accented ; e.g. gama-thyai.

The regular accentuation of monoxyllabic stems when compounded ; ep. 11 c, 1.

^{*} But vid-man-e to know.

With a secondary accent on the final syllable ; on above, 7.

But when the preposition is detached the infinitive retains its accent; e.g. pra distance to present to the worshipper.

tave is cone up; apa-bhar-tavai 1; a be saken usug. When there are two prepositions the first may be separate and independently accented; e.g. and pra-volhum is estence along, vi pra-sartave to spread.

- 15. Gerunds formed with tvi, tvä, tväys accent the suffix, but when they are compounded with prepositions (here always inseparable) and formed with ya or tyå, they accent the root; e.g. bhū-två having become, ga-tvi and ga-tvåya having gone; sam-gfbh-ya having gathered, upa-śrū-tya (AV.) having overcome.
- 16. Case forms used as adverbs frequently shift their accent to indicate clearly a change of meaning.² The accusative neuter form is here the commonest; e. g. dravát quickly, but drávat running; aparám later, but áparam as a. adj.; uttarám higher, but úttaram as n. adj.; adverbs in vát e. g. pratna-vát as of old, but the acc. n. of adjectives in vant do not accent the suffix. Examples of other cases are: dív-a by day, but div-a through heaven; aparáya for the future, but áparáya to the later; sanát from of old, but sánát from the old.

6. Sandhi Accent.

17. 1. When two vowels combine so as to form a long vowel or diphthong, the latter receives the Udatta, if either or both the original vowels had it; e.g. agat = a agat; nudasvatha = nudasva atha: kvét = kvá it; nautarah = ná antarah.

a. But the contraction of i i is ascented as 1,4 the auditis Svarita (ii) having here ented the preceding Udhita; a.g. diviva = diviva.

¹ Retaining the escendary accent on the final syllable.

Such a shift is found in nones to indicate either a simple change of meaning, e.g. jréstha grades, but jyestha change of category also, e.g. gómati rích in com, but gomati name of a river; rájaputra son of a king, but rájaputra horiso sons ar king.

³ Put when a Svarita on a final vowel is followed by an unaccented initial vowel, it of course remains, e. g. kvôyatha - kva tyatha.

^{*} In the RV, and AV,, but not in the Taittiriya texts, which follow the general rule.

BY, and AV., but divive in the Taittiriya texts.

This is the prasting or contracted Syzrita of the Pratisakhyas.

- 2. When i and u with Udatta are changed to y and v, a following unaccented vowel receives the Svarita; le.g. vy anat = vi anat. Here the Svarita assumes the appearance of an independent accent; but the uncontracted form with the Udatta must almost invariably be pronounced in the RV.
- 3. When accented á is elided it throws back its Udatta on unaccented e or o; e.g. sűnávé igne = sűnáve ágne; vó ivasah = vo ávasah. But when unaccented a is elided, it changes a preceding Udatta to Svarita; e.g. sò idhamáh = só adhamáh.

7. Sentence Accent.

18. The vocative, whether it be a single word or a compound expression, can be accented on its first syllable only.

a. It retains its accent only at the beginning of a sentence or Pada, that is, when having the full force of the case it occupies the most emphatic position; e.g. agne, supayano bhava O Agni, be easy of access; urjo napat sahasavan omighty son of strength. This rule also applies to doubly accented dual compounds; e.g. mitra-varuna of Mitra and Varuna. Two or more vocatives at the beginning of a sentence are all accented; e.g. adite, mitra, varuna of Aditi, O Mitra, O Varuna. Two accented vocatives are sometimes applicable to the same person; e.g. urjo napad,

This is the abhinihita Sysrita of the Pratisakhyas.
Here the Sysrita (6 a) has ousted the preceding Udatta.

¹ This is the ksaipra or quickly pronounced Svarita of the Pratisakhyna.

This applies to the second as well as the first Pada of a hemistich, indicating that both originally had a motually independent character, which is obscured by the strict application of Sandhi and the absence of any break in marking the ascent, at the internal junction of the Padas of a hemistich.

^{*} The corresponding nom, would be urjo napat sahasava.

^{*} The nom. is mitra-varuna.

bhádraíocige O son of strength, O propitionsly bright one (both addressed to Agni).1

- b. When it does not begin the sentence or Pāda, the vocative, being unemphatic, loses its accent; e. g. upa tvā, agne divė-dive | doṣāvastar² dhiyā vayām | nāmo bhāranta émasi to thee, O Agni, day by day, O illuminer of darkness, bringing homage with prayer we come; ā rājānā maha rtasya gopā hither (come), O ye two soccreign guardians of great order; rtona mitrā-varuṇāv | rtāvrdhāv rtaspršā | through Law, O law-loving, law-cherishing Mitra und Varuṇa; yád indra brahmaṇaspate | abhidrohām cārāmasi | if, O Indra, O Bruhmaṇaspati, we commit an offence.
- 19. The verb is differently accented according to the nature of the sentence.
- A. The finite verb in a principal sentence is unaccented; e.g. agnim the purchitam I praise Agni the domestic priest.

 This general rule is subject to the following restrictions:
- a. A sentence being regarded as capable of having only one verb, all other verbs syntactically connected with the subject of the first are accented as beginning new sentences; a e.g. tesam pahi, srudhi havam drink of them, hear our call; taranir ij jayati, kseti, pusyati the energetic man conquers, rules, thrives; jahi prajam nayasva ca slop the progeny and bring (it) hither.
 - b. The verb is accented if it begins the sentence or if,

³ Here the second you is accented as in apposition, whereas if it wore used attributively it would be unaccented as in hotar yaxistha sukrato o possessed wise point.

Accented because the first word of the Pada.

^{*} This might represent two vocatives addressed to the same persons; their accented form would then be: rajana, maha rasya gopa.

Here the rule that the whole of the compound voc, must be an accounted overrides the rule that the limit word of the Pada must be accounted, i.e. here fravedhav.

An example of two independent unaccented vocatives.

[&]quot; A subject or object coming between two such verbs is generally counted to the first,

though not beginning the sentence, it coincides with the beginning of a Pada; e.g. śáye vavríš, cárati jihváyadán | rerihyáte yuvatím viápátih sán the covering lies (there); he (Agni) moves cating with his tongue; he kisses the maiden, being the lord of the house; áthá to ántamanam | vidyáma sumatínám then may we experience thy highest favours.

c. Vocatives being treated as extraneous to a sentence, a verb immediately following an initial one, becomes the first word of the sentence and is accordingly accented; e.g. ágne, jugásva no havih O Agni, enjoy our sacrifice. Thus the sentence indra, jiva; súrya, jiva; déva, jivata O Indra, lice; O Sarya, lice; O gods, lice contains three accented verbs as beginning three sentences, while the three preceding vocatives are accented as being at the head of those sentences, though syntactically outside them.

d. Sometimes the verb when emphatic, though not beginning the sentence, is accented if followed by the particles id or caná; e.g. ádha smá no maghavañ carkṛtâd it then be miniful of us, bountiful one; ná devá bhasáthaś caná (him) O gods, ye two never consume.

B. The verb of a subordinate clause (introduced by the relative ya and its derivatives, or containing the particles on and ced if; ned lest, hi for, kuvid whether) is always accented; e.g. yam yajūam paribhūr asi what offering then protectest; grhan gacha grhapatni yatha asah go to the house that thou mayest be the lady of the house; indras on mrlayati no, na nah pascad agham nasat if Indra be gracious to us, no evil will hereafter reach us; tvam hi balada asi for thou art a giver of strength. The relative may govern two verbs; e.g. yana surya jyötisa badhase tamo, jagac on visvam udiyarsi bhānunā the light with which thou, O Sun, drivest away the darkness and arousest all the world with thu beam.

The rule is subject to the extension that principal clauses in form may be accented as subordinate in sense under the following conditions: a. The first of two clauses, if equivalent to one introduced by 'if' or 'when 'is occasionally accepted; o.g. sim savaparpas odranti no navo, asmakam indra rathino jayantu when our most winged with about the locater, may our cur-fighters, Indra, win sichery.

A. The first of two untithelical clauses is frequently accented, aspecially when the antithesis is clearly indicated by corresponding words like anys-anys, obsects, ca-ca, va-va; e.g. pra-pra_acys yanti, pacy anys asate while one go on, there all down; sain ca, idhasva agno, pra ca bedhaya, enam both he kindled, Agni, and scales this same's branching. When the verb of two such clauses is the same, it usually appears (accented) in the first only; e.g. divipac on acream no rakes, catuspad yao on ush svam protest both sway hipsel of ours and schatzer quadruped is our cost.

y. The verb of the account clause is mounted if it is a 1- pers, subjunctive or 2- pers, importance with a final meaning, and the verb of the first clause is a 2- pers, impv. of \$1+i\$, gam, or ya 90; a. g. \$1, dhiyam kryavama come, as will offer power; thyam & gahi, kinvessu shada piba come quakty, beside the Kanme drinking 50. In B. the verb of the flest clause is an impv. of either \$1 or pri-1; a g. \$1, idam patava (\$B.) come, we will now fly thinker; press tid surface or gaining this earth (\$B.). The second verb is, however, in similar passages not infrequently left unaccounted in B.

Verbal Prepositions.

20. A. In principal clauses the preposition, which is detached and usually precedes but sometimes follows the verb, is accented; e.g. a gamat may be come; gavam apa vrajam vrdhi unclose the stable of the kine; jayema sam yudhi spfdhah we would conquer our adversaries in fight; gamad vajebhir a sa nah may be come to us with booty.

a. When there are two prepositions, both are independent and accented; a.g. upa prá yūhi come forth; pári spášo ni sedire the spies have sat down around; agne ví pašya brhatá abhi rāyā O Agni, look forth towards (us) with ample wealth.

⁴ This accontration is more strictly applied in B: then in V., and among the Samulias least strictly in the EV.
² In B, the acconted work is gither a subjunctive or a future.

- a. When a is immediately preceded by another preposition (not ending in t) it alone is accorded, both prepositions being compounded with the verb; e.g. sam-a-kryoni fivate than filled (thum) to ite; but praty a tangen draw (thy bow) against (thum)
- B. In subordinate clauses the exact reverse takes place, the preposition being generally compounded and unaccented; e.g. yad. nisidathab when ye two sit down. It is, however, often separated by other words from the verb, when it commonly commences the Pāda, or much less frequently follows the verb; e.g. vi yo mamé rájasī who measured out the two expanses; yas tastámbha sáhasā vi jmó ántán who with might propped earth's ends asunder. Occasionally the preposition is detached and accented even immediately before the verb; e.g. yá áhutim pári véda námobhih who fully knows the offering with devotion.
- a. When there are two prepositions, either both are compounded and unaccented or the first only is detached and accented; e.g. yūyáin hi devih pari-pra-yāthá for ye, O goddesses, proceed around; yátra abhi sam-navamaho where we to (him) together shout; sám yám a-yánti dhenávah to whom the cows come together.
- a. Very rarely both propositions are detached and accounted; a.g. pra yat stood. . Apa girbhir lite when the praiser hands him with sound.

VEDIC INDEX

This index contains all Sanskrit words and affixes occurring in the grammar, except the verbs in Appendix I, which can be found at once owing to their alphabetical order. Indifferent words occurring in examples of Sandhi, of nominal derivation (Chapter VI), or of Syntax, as well as in Appendixes II and III, are excluded,

The figures refer to paragraphs unless pages are specified.
